1 INTRODUCTION

This report has been compiled to provide a summary of environmental monitoring results for Mt Thorley Warkworth in accordance with Environment Protection Licences 24, 1376 and 1976. This report includes all monitoring data collected in accordance with the aforementioned Licences for the period 1st February – 28th February 2018.

Monitoring in this report includes:

- Air quality monitoring;
- Surface water monitoring including mine water discharge and effluent quality; and
- Blast monitoring.

Monitoring locations are shown in Figure 1.

2 AIR QUALITY

In accordance with the requirements of Condition M2.2 (WML 1376 and MTO 1976), Mount Thorley Warkworth maintains a network of five PM₁₀ monitors. The following monitoring locations (EPA Monitoring Points 9, 10, 11, 12 and 13) are listed on the Licences for the purpose of monitoring:

- EPA Identification Number 9 (WML 1376) – Warkworth North
- EPA Identification Number 10 (WML 1376 & MTO 1976) – Dragline Crossing
- EPA Identification Number 11 (WML 1376 & MTO 1976) – Heavy Vehicle Bridge
- EPA Identification Number 12 (WML 1376 & MTO 1976) – MTIE
- EPA Identification Number 13 (MTO 1976) – MTO Boundary

Results of Particulates (PM₁₀) monitoring (EPA Monitoring Points 9, 10, 11, 12 and 13) are shown in Table 1. Results reported represent the 24hr average PM₁₀, derived from 10 minute PM₁₀ values for the period midnight to midnight, for each calendar date during the reporting period. The last sampling date was 28th February 2018; the data was obtained on the 1st March 2018.

TABLE 1: PARTICULATE MATTER <10µM MONITORING

Date	Unit of Measure	Monitoring Frequency & Capture	Monitoring Point				
			Warkworth North	MTO Boundary	Dragline Crossing	Heavy Vehicle Bridge	MTIE

3 SURFACE WATER

3.1 Mine Water Discharge Monitoring

MTW participates in the Hunter River Salinity Trading Scheme (HRSTS), and maintains two monitoring locations associated with this scheme as follows:

- EPA Monitoring Point 1 (WML EPL 1376) – Dam 1N Discharge Point
- EPA Monitoring Point 4 (MTO EPL 1976) – The end of the discharge pipe from Dam 9

Mt Thorley Warkworth did not receive any discharge opportunities in the reporting period and no water was discharged. As such, no samples were collected at Monitoring Points 1 and 4 during the reporting period (shown in Table 2 below).

TABLE 2: MINE WATER DISCHARGE MONITORING

Discharge Point	Date	Pollutant	unit of measure	Licence Limits	No. of samples required by licence	No. of samples you collected and analysed
Dam 1N Discharge / EPL Point 1	N/A	Electrical Conductivity	microsiemens per centimetre	-	0	0
		pH	pH	6.5 - 9.0	0	0
		Total Suspended Solids	milligrams per litre	120	0	0
Dam 9S Discharge / EPL Point 4	N/A	Electrical Conductivity	microsiemens per centimetre	-	0	0
		pH	pH	6.5 - 9.0	0	0
		Total Suspended Solids	milligrams per litre	120	0	0

3.2 Hunter River Tributaries Monitoring

MTW undertakes routine monitoring in Loders Creek, in accordance with Condition M2.3, at the following location:

- EPA Monitoring Point 3 (MTO EPL 1976) – In Loders Creek, at the coal preparation plant access road bridge

Result of monitoring undertaken from W5 – Loders Creek is detailed in Table 3. Monthly sampling occurred on 14th February 2018, the data was obtained on 9th March 2018.

TABLE 3: HUNTER WATER TRIBUTARIES MONITORING

Monitoring Location	Pollutant	unit of measure	Monitoring frequency required by licence	No. of samples you collected and analysed	Value
Loders Creek / EPL Point 3	Electrical Conductivity	microsiemens per centimetre	Once a month (min. of 4 weeks)	0	#
	pH	pH units	Once a month (min. of 4 weeks)	0	#
	Total Suspended Solids	milligrams per litre	Once a month (min. of 4 weeks)	0	#

- Sample unable to be collected due to insufficient water

3.3 Effluent Quality Monitoring

MTO undertakes routine monitoring in the MTO receiving lagoon (Dam 1S), in accordance with Condition M2.3, at the following location:

- EPA Monitoring Point 18 (MTO EPL 1976) – Dam 1S

Sampling is undertaken on a quarterly basis and as such no sampling was conducted in February 2018. The next sampling event will be in March 2018

TABLE 4: EFFLUENT QUALITY MONITORING

Monitoring Location	Pollutant	unit of measure	Monitoring frequency required by licence	No. of samples you collected and analysed	Value
Dam 1S / EPL Point 18	Faecal Coliforms	Colony forming units per 100 millilitres	Once a quarter	-	-
	pH	pH units	Once a quarter	-	-

4 BLAST MONITORING

In accordance with the requirements of Conditions M7.1 (WML 1376) and M8.1 (MTO 1976), Mount Thorley Warkworth maintains a network of blast monitors to measure airblast overpressure and ground vibration for all blasts carried out at MTW. The following monitoring locations (EPA Monitoring Points 4/5, 5/6, 6/7, 7/8 and 8/9) are listed on the Licences for the purpose of assessing compliance with the airblast overpressure and ground vibration criteria:

- EPA Identification Number 4 (WML 1376) and Number 5 (MTO 1976) respectively – Warkworth
- EPA Identification Number 5 (WML 1376) and Number 6 (MTO 1976) respectively – Wambo Road
- EPA Identification Number 6 (WML 1376) and Number 7 (MTO 1976) respectively – Bulga Village
- EPA Identification Number 7 (WML 1376) and Number 8 (MTO 1976) respectively – Wollemi Peak Road
- EPA Identification Number 8 (WML 1376) and Number 9 (MTO 1976) respectively – Putty Road MTIE

The last date sampled was on 28th February 2018. The data was obtained on the 5th March 2018.

During the reporting period no blasts exceeded the 115 dB(L) or the 5mm/s threshold for airblast overpressure and ground vibration respectively.

Blast monitoring results are detailed in Tables 5 (Airblast Overpressure) and 6 (Ground Vibration).
