

Agricultural Land Suitability	
Land Class	Description
Class 3	Grazing land or land well suited to pasture improvement. It may be cultivated or cropped in rotation with pasture. The overall production level is moderate because of edaphic or environmental constraints. Erosion hazard, soil structural breakdown and other factors including climate may limit the capacity for cultivation, and soil conservation or drainage works may be required.
Class 4	Land suitable for grazing but not for cultivation. Agriculture is base based on native pastures or improved pastures established using minimum tillage techniques. Production may be high seasonally but overall level of production is low as a result of a number of major constraints both environmental and edaphic.
Class 5	Land unsuitable for agriculture or at best suited to only light grazing. Agricultural production is very low to zero as a result of severe constraints, including economic factors, which preclude land improvement.
