1 PREFACE

1.1 Introduction

Mt Thorley Warkworth (MTW) is an integrated operation of two open cut mines, Warkworth Mining Limited (WML) and Mount Thorley Operations (MTO) which are located adjacent to each other and 15 km south west of Singleton in the Hunter Valley region of New South Wales. The operation supplies international and domestic markets with semi-soft coking coal and thermal coal.

MTW is an open cut mine, using dragline and truck and shovel method. Employees work in shifts to keep the mine operational 24 hours a day, seven days a week.

Operations are centred in the Wittingham Coal Measures of the Hunter Coalfield which is part of a Permian coal basin known as the Sydney basin.

After being washed and prepared for sale, the coal is loaded onto trains for transportation to Newcastle where it is shipped to international customers via the Port Waratah Coal Terminal.

Development Consent for the Warkworth Continuation Project (SSD-6464) and Mount Thorley Operations 2014 Project (SSD-6465) was granted on 26th November 2015. A modification to the Warkworth Continuation Project (SSD-6464 MOD2) was granted on 27 May 2022.

The Projects are described in detail in the Environmental Impact Statements and supporting documents (prepared by EMGA Mitchell McLennan, June 2014), and the Modification Report (SSD-6464 MOD 2, September 2021).

1.2 Scope of the Blast Management Plan (BMP)

This BMP has been prepared in accordance with the requirements of Schedule 5, Condition 3 of the Approvals, which describes the requirements for all management plans. In addition, the plan meets the requirements of Schedule 3, Condition 16 (WML) and

Schedule 3, Condition 14 (MTO), which sets out the requirements for the BMP.

Table 1 below highlights the Approval conditions required to be covered by this BMP and the sections within this document in which they are addressed.

MTW maintains Environment Protection Licences (EPLs) issued under the Protection of the Environment Operations Act by the NSW Environment Protection Authority (EPA). EPLs 1376 (WML) and 1976 (MTO) contain operating conditions relating to blasting activity. These conditions are also addressed in this BMP (**Table 2**).

Table 1 - Development Consent conditions addressed by the BMP

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement											
Warkworth Mining Limited (SSD-6464 MOD 2)													
Sch. 2 Cond. 14	<p>Updating & Staging Strategies, Plans or Programs</p> <p>With the approval of the Planning Secretary, the Applicant may:</p> <ul style="list-style-type: none"> (a) Submit any strategy, plan or program required by this consent on a progressive basis; and (b) Combine any strategy, plan or program required by this consent with any similar strategy, plan or program required for the Mt Thorley mine. <p>To ensure these strategies, plans or programs are updates on a regular basis; the Applicant may at any time submit revised strategies, plans or programs to the Planning Secretary for approval.</p> <p>With the agreement of the Planning Secretary, the Applicant may prepare any revised strategy, plan or program without undertaking consultation with all parties under the applicable condition of this consent.</p> <p><i>Notes:</i></p> <ul style="list-style-type: none"> • While any strategy, plan or program may be submitted on a progressive basis, the Applicant will need to ensure that the existing operations on site are covered by suitable strategies, plans or programs at all times. • If the submission of any strategy, plan or program is to be staged, then the relevant strategy, plan or program must clearly describe the specific stage to which the strategy, plan or program applies; the relationship of this stage to any future stages, and the trigger for updating the strategy, plan or program. 	NA											
Sch. 3 Cond. 8	<p>Blasting Criteria</p> <p>The Applicant must ensure that the blasting on the site does not cause exceedances of the criteria in Table 4.-</p> <p><i>Table 4: Blasting criteria</i></p> <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="width: 35%;">Location</th> <th style="width: 20%;">Airblast overpressure (dB(Lin Peak))</th> <th style="width: 20%;">Ground vibration (mm/s)</th> <th style="width: 25%;">Allowable exceedance</th> </tr> </thead> <tbody> <tr> <td rowspan="2">Residence on privately owned land</td> <td>120</td> <td>10</td> <td>0%</td> </tr> <tr> <td>115</td> <td>5</td> <td>5% of the total number of blasts over a period of 12 months</td> </tr> </tbody> </table> <p>However, these criteria do not apply if the Applicant has a written agreement with the relevant owner, and has advised the Department in writing of the terms of this agreement.</p>	Location	Airblast overpressure (dB(Lin Peak))	Ground vibration (mm/s)	Allowable exceedance	Residence on privately owned land	120	10	0%	115	5	5% of the total number of blasts over a period of 12 months	Appendix E
Location	Airblast overpressure (dB(Lin Peak))	Ground vibration (mm/s)	Allowable exceedance										
Residence on privately owned land	120	10	0%										
	115	5	5% of the total number of blasts over a period of 12 months										
Sch. 3 Cond. 9	<p>Blasting Hours</p> <p>The Applicant must only carry out blasting on site between 7am and 5pm Monday to Saturday inclusive. No blasting is allowed on Sundays, public holidays, or at any other time without the written approval of the Planning Secretary.</p>	Section 5.2.1											
Sch. 3 Cond. 10	<p>Blasting Frequency</p> <p>The Applicant may carry out a maximum of:</p> <ul style="list-style-type: none"> a) 3 blasts a day; and b) 12 blasts a week, averaged over a calendar year, <p>At the site.</p> <p>This condition does not apply to blasts that generate ground vibration of 0.5mm/s or less at any residence on privately-owned land, blast misfires or blasts required to ensure the safety of the mine, its workers or the general public.</p> <p><i>Notes:</i></p>	Section 5.2.2											

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
	<ul style="list-style-type: none"> • <i>For the purposes of this condition, a blast refers to a single blast event, which may involve a number of individual blasts fired in quick succession in a discrete area of the mine.</i> • <i>For the avoidance of doubt, should an additional blast be required after a blast misfire, this additional blast and the blast misfire are counted as a single blast.</i> • <i>In circumstances of recurring unfavourable weather condition (following planned but not completed blast events), to avoid excess explosive sleep times and minimise any potential environmental impacts, the Applicant may seek agreement from the Planning Secretary for additional blasts to be fired on a given day.</i> 	
Sch. 3 Cond. 11	The Applicant must not carry out more than 1 blast a day within 500 metres of the Putty Road and/or Golden Highway.	Section 5.2.3
Sch. 3 Cond. 12	<p>Property Inspections</p> <p>If the Applicant receives a written request from the owner of any privately-owned land within 2 kilometres of the approved open cut mining pit/s on site for a property inspection to establish the baseline condition of any buildings and/or structures on his/her land, or to have a previous property inspection updated, then within 2 months of receiving this request the Applicant must:</p> <ol style="list-style-type: none"> a) Commission a suitably qualified, experienced and independent person, whose appointment is acceptable to both parties to: <ul style="list-style-type: none"> • Establish the baseline condition of any buildings and other structures on the land, or update the previous property inspection report; and • Identify measures that should be implemented to minimise the potential blasting impacts of the development on these buildings and/or structures; and b) Give the landowner a copy of the new or updated property inspection report. <p>If there is a dispute over the selection of the suitably qualified, experienced and independent person, or the Applicant or the landowner disagrees with the findings of the property inspection report, either party may refer the matter to the Planning Secretary for resolution.</p>	Section 6.1
Sch. 3 Cond. 13	<p>Property Investigations</p> <p>If the owner of any privately-owned land claims that buildings and/or structures on his/her land have been damaged as a result of blasting on the site, then within 2 months of receiving this claim the Applicant must:</p> <ol style="list-style-type: none"> a) Commission a suitably qualified, experienced and independent person, whose appointment is acceptable to both parties to investigate the claim; and b) Give the landowner a copy of the property inspection report. <p>If this independent property investigation confirms the landowner’s claim, and both parties agree with these findings, then the Applicant must repair the damage to the satisfaction of the Planning Secretary.</p> <p>If there is a dispute over the selection of the suitably qualified, experienced and independent person, or the Applicant or the landowner disagrees with the findings of the independent property investigation, then either party may refer the matter to the Planning Secretary for resolution.</p>	Section 6.2
Sch. 3 Cond. 14	<p>Operating Conditions</p> <p>During mining operations on site, the Applicant must:</p> <ol style="list-style-type: none"> a) Implement all reasonable and feasible measures to: <ul style="list-style-type: none"> • Protect the safety of people and livestock in the surrounding area; • Protect public or private infrastructure / property in the surrounding area from any damage; and • Minimise the dust and fume emissions of any blasting; b) Ensure that blasting on the site does not damage the Wambo Homestead, Bulga Bridge, St Phillips Church or the following Aboriginal grinding groove sites: <ul style="list-style-type: none"> • MTW-266~WSW-02-22; • MTW-267~WSW-09-22; 	Sections 3.2, 5.2.2, 5.2.3, and 5.2.4

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
	<ul style="list-style-type: none"> • MTW-268~WSW-209-23; and • Aboriginal grinding groove site Mt Thorley M 37-6-0163 (prior to its relocation); <p>c) Minimise the frequency and duration of any road closures; and</p> <p>d) Operate a suitable system (including a hotline and website updates) to enable the public to get up-to-date information on the proposed blasting schedule on site,</p> <p><i>Note: To identify the Aboriginal grinding grooves and historic heritage sites referred to in this condition, see the applicable figures in Appendix 5.</i></p>	
Sch. 3 Cond. 15	<p>The Applicant must not undertake blasting on site within 500m of:</p> <p>a) Any public road; or</p> <p>b) Any land outside the site that is not owned by the Applicant, unless:</p> <ul style="list-style-type: none"> • The Applicant has a written agreement with the applicable infrastructure authority or landowner to allow blasting to be carried out closer to the infrastructure or land, and the Applicant has advised the Department in writing of the terms of this agreement, or • The Applicant has: <ul style="list-style-type: none"> ○ Demonstrated to the satisfaction of the Planning Secretary that the blasting can be carried out closer to the infrastructure or land without compromising the safety of the people or livestock, or damaging the buildings and/or structures; and ○ Updated the Blast Management Plan to include the specific measures that would be implemented while blasting is being carried out within 500 metres of the road or land. 	Section 5.2.3
Sch. 3 Cond. 16	<p>Blast Management Plan The Applicant must prepare a Blast Management Plan for the development to the satisfaction of the Planning Secretary. This plan must:</p> <p>a) Be prepared in consultation with the EPA, and submitted to the Planning Secretary for approval prior to carrying out any development under this consent;</p> <p>b) Describe the measures that would be implemented to ensure compliance with the blasting criteria and operating conditions of this consent;</p> <p>c) Include a road closure management plan for blasting within 500 metres of a public road, that has been prepared in consultation with the TfNSW and Council;</p> <p>d) Include a monitoring program for evaluating the performance of the development, including</p> <ul style="list-style-type: none"> • Compliance with the applicable criteria; • Avoiding any blasting impacts on the heritage items specified in condition 14 above; and • Minimising the fume emissions from the site. 	<p>This BMP</p> <p>Section 3.1.1</p> <p>Section 5</p> <p>Appendix D</p> <p>Appendix E</p>
Sch. 4 Cond. 3	<p>Notification of Landowners / Tenants As soon as practicable after obtaining monitoring results showing:</p> <p>a) An exceedance of any relevant criteria in Schedule 3, the Applicant shall notify affected landowners in writing of the exceedance, and provide regular monitoring results to each affected landowner until the development is again complying with the relevant criteria.</p>	<p>Section 7.1.2.1</p>
Sch. 4 Cond. 4	<p>Independent Review If an owner of privately-owned land considers the development to be exceeding the criteria in Schedule 3, then he/she may ask the Planning Secretary in writing for an independent review of the impacts of the development on his/her land.</p>	Section 6.3

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
	<p>If the Planning Secretary is satisfied that an independent review is warranted, then the Applicant must:</p> <ol style="list-style-type: none"> a) Commission a suitably qualified, experienced and independent expert, whose appointment has been approved by the Planning Secretary, to: <ul style="list-style-type: none"> • Consult with the landowner to determine his / her concerns; • Conduct monitoring to determine whether the development is complying with the relevant impact assessment criteria in schedule 3; and • If the development is not complying with these criteria then: <ul style="list-style-type: none"> ○ Determine if more than one mine is responsible for the exceedance, and if so the relative share of each mine regarding the impact on the land; ○ Identify the measures that could be implemented to ensure compliance with the relevant criteria; and b) Give the Planning Secretary and landowner a copy of the independent review within 2 months of the Planning Secretary's decision, unless the Planning Secretary agrees otherwise. 	
Sch. 5 Cond. 2	<p>Adaptive Management</p> <p>The Applicant must assess and manage development-related risks to ensure that there are no exceedances of the criteria and/or performance measures in Schedule 3. Any exceedance of these criteria and/or performance measures constitutes a breach of this consent and may be subject to penalty or offence provisions under the EP&A Act or EP&A Regulation. Where any exceedance of these criteria and/or performance measures has occurred, the Applicant must, at the earliest opportunity:</p> <ol style="list-style-type: none"> a) Take all reasonable and feasible steps to ensure that the exceedance ceases and does not recur; b) Consider all reasonable and feasible options for remediation (where relevant) and submit a report to the Department describing those options and any preferred remediation measure or other course of action; and c) Implement remediation measures as directed by the Planning Secretary. 	Section 5.4
Sch. 5 Cond. 3	<p>Management Plan Requirements</p> <p>The Applicant must ensure that the management plans required under this consent are prepared in accordance with any relevant guidelines, and include:</p> <ol style="list-style-type: none"> a) Detailed baseline data; b) A description of <ul style="list-style-type: none"> • The relevant statutory requirements (including any relevant consent, licence or lease conditions); • Any relevant limits or performance measures / criteria; • The specific performance indicators that are proposed to be used to judge the performance of, or guide the implementation of, the development of any management measures; c) A description of the measures that would be implemented to comply with the relevant statutory requirements, limits, or performance measures / criteria; d) A program to monitor and report on the: <ul style="list-style-type: none"> • Impacts and environmental performance of the development; • Effectiveness of any management measures (see c above) e) A contingency plan to manage any unpredicted impacts and their consequences; f) A program to investigate and implement ways to improve the environmental performance of the development over time; g) A protocol for managing and reporting any: <ul style="list-style-type: none"> • Incidents; • Complaints; 	<p>Appendix F</p> <p>Section 5</p> <p>Appendix E</p> <p>Section 5.4</p> <p>Section 7.2</p> <p>Section 7.3</p>

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
	<ul style="list-style-type: none"> • Non-compliances with statutory requirements; and • Exceedances of the impact assessment criteria and/or performance criteria; and <p>A protocol for periodic review of the plan. <i>Note: The Planning Secretary may waive some of these requirements if they are unnecessary or unwarranted for particular management plans.</i></p>	
Sch. 5 Cond. 4	<p>Annual Review</p> <p>By the end of March each year, the Applicant must review the environmental performance of the development for the previous calendar year to the satisfaction of the Planning Secretary. This review must:</p> <ol style="list-style-type: none"> a) Describe the development (including any rehabilitation) that was carried out in the past calendar year, and the development that is proposed to be carried out over the current calendar year; b) Include a comprehensive review of the monitoring results and complaints records of the development over the past year, which includes a comparison of these results against the <ul style="list-style-type: none"> • The relevant statutory requirements, limits or performance measurements / criteria; • The monitoring results of previous years; and • The relevant predictions in the EIS; c) Identify any non-compliance over the last year, and describe what actions were (or are being) taken to ensure compliance; d) Identify any trends in the monitoring data over the life of the development; e) Identify any discrepancies between the predicted and actual impacts of the development, and analyse the potential cause of any significant discrepancies; and f) Describe what measures will be implemented over the next year to improve the environmental performance of the development. 	Section 7.1.2.2
Sch. 5 Cond. 5	<p>Review of Strategies, Plans and Programs</p> <ol style="list-style-type: none"> a) Within 3 months of the submission of an: <ol style="list-style-type: none"> a) Annual review under condition 4 above; b) Incident report under condition 7 below; c) Audit under condition 9 below; or b) Any modification to the conditions of this consent (unless the conditions require otherwise), or c) The introduction of any NSW government policy regarding voids, <p>the Applicant must review, and if necessary revise, the strategies, plans and programs required under this consent to the satisfaction of the Planning Secretary.</p> <p>Where this review leads to revisions in any such document, then within 4 weeks of the review, unless the Planning Secretary agrees otherwise, the revised document must be submitted to the Planning Secretary for approval.</p> <p><i>Note: This is to ensure the strategies, plans and programs are updated on a regular basis, and incorporate any recommended measures to improve the environmental performance of the development.</i></p>	Section 7.3
Sch. 5 Cond. 7	<p>Incident Notification</p> <p>The Applicant must immediately notify the Department and any other relevant agencies after it becomes aware of the incident. The notification must be in writing via the Department's Major Projects Website and identify the development (including the development application number and name) and set out the location and nature of the incident.</p>	Section 5.4

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
Sch. 5 Cond. 7A	<p>Non-Compliance Notification</p> <p>Within seven days of becoming aware of a non-compliance, the Applicant must notify the Department of the non-compliance. The notification must be in writing via the Department’s Major Projects Website and identify the development (including the development application number and name), set out the condition of this consent that the development is non-compliant with, why it does not comply and the reasons for the non-compliance (if known) and what actions have been, or will be, undertaken to address the non-compliance.</p> <p>Note: A non-compliance which has been notified as an incident does not need to also be notified as a non-compliance.</p>	
Sch. 5 Cond. 8	<p>Regular Reporting</p> <p>The Applicant must provide regular reporting on the environmental performance of the development on its website, in accordance with the reporting arrangements in any plans or programs approved under the conditions of this consent.</p>	Section 7.1.2.2
Sch. 5, Cond. 11	<p>Access to Information</p> <p>From the commencement of development under this consent, The Applicant must:</p> <ol style="list-style-type: none"> a) Make copies of the following publicly available on its website: <ul style="list-style-type: none"> • The EIS; • Current statutory approvals for the development; • Approved strategies, plans or programs required under the conditions of this consent; • A comprehensive summary of the monitoring results of the development, reported in accordance with the specifications in any conditions of this consent, or any approved plans and programs; • The results of real time noise monitoring, updated daily (unless otherwise agreed by the Planning Secretary); • A complaints register, which is to be updated monthly; • Minutes of CCC meetings; • The annual reviews of the development (for the last 5 years, if applicable); • Any independent environmental audit of the development, and the Applicant’s response to the recommendations in any audit; • Any other matter required by the Planning Secretary; and b) Keep this information up to date. 	Section 7.1.2.2
Mount Thorley Operations Development Consent (SSD-6465)		
Sch. 2 Cond. 14	<p>Updating & Staging Strategies, Plans or Programs</p> <p>With the approval of the Secretary, the Applicant may:</p> <ol style="list-style-type: none"> (a) Submit any strategy, plan or program required by this consent on a progressive basis; and (b) Combine any strategy, plan or program required by this consent with any similar strategy, plan or program required for the Warkworth mine. <p>To ensure these strategies, plans or programs are updates on a regular basis; the Applicant may at any time submit revised strategies, plans or programs to the Secretary for approval.</p> <p>With the agreement of the Secretary, the Applicant may prepare any revised strategy, plan or program without undertaking consultation with all parties under the applicable condition of this consent.</p> <p><i>Notes:</i></p> <ul style="list-style-type: none"> • <i>While any strategy, plan or program may be submitted on a progressive basis, the Applicant will need to ensure that the existing operations on site are covered by suitable strategies, plans or programs at all times.</i> 	NA

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement											
	<ul style="list-style-type: none"> If the submission of any strategy, plan or program is to be staged, then the relevant strategy, plan or program must clearly describe the specific stage to which the strategy, plan or program applies; the relationship of this stage to any future stages, and the trigger for updating the strategy, plan or program. 												
Sch. 3 Cond. 6	<p>Blasting Criteria The Applicant shall ensure that the blasting on the site does not cause exceedances of the criteria in Table 4.</p> <p><i>Table 4: Blasting criteria</i></p> <table border="1"> <thead> <tr> <th>Location</th> <th>Airblast overpressure (dB(Lin Peak))</th> <th>Ground vibration (mm/s)</th> <th>Allowable exceedance</th> </tr> </thead> <tbody> <tr> <td rowspan="2">Residence on privately owned land</td> <td>120</td> <td>10</td> <td>0%</td> </tr> <tr> <td>115</td> <td>5</td> <td>5% of the total number of blasts over a period of 12 months</td> </tr> </tbody> </table> <p>However, these criteria do not apply if the Applicant has a written agreement with the relevant owner, and has advised the Department in writing of the terms of this agreement.</p>	Location	Airblast overpressure (dB(Lin Peak))	Ground vibration (mm/s)	Allowable exceedance	Residence on privately owned land	120	10	0%	115	5	5% of the total number of blasts over a period of 12 months	Appendix E
Location	Airblast overpressure (dB(Lin Peak))	Ground vibration (mm/s)	Allowable exceedance										
Residence on privately owned land	120	10	0%										
	115	5	5% of the total number of blasts over a period of 12 months										
Sch. 3, Cond.7	<p>Blasting Hours The Applicant shall only carry out blasting at the development between 7 am and 5pm Monday to Saturday inclusive. No blasting is allowed on Sundays, public holidays, or at any other time without the written approval of the Secretary.</p>	Section 5.2.1											
Sch. 3 Cond. 8	<p>Blasting Frequency The Applicant may carry out a maximum of:</p> <ol style="list-style-type: none"> 2 blasts a day; and 6 blasts a week, averaged over a calendar year, <p>at the site.</p> <p>This condition does not apply to blasts that generate ground vibration of 0.5mm/s or less at any residence on privately-owned land, blast misfires or blasts required to ensure the safety of the mine, its workers or the general public.</p> <p><i>Notes:</i></p> <ul style="list-style-type: none"> For the purposes of this condition, a blast refers to a single blast event, which may involve a number of individual blasts fired in quick succession in a discrete area of the mine. For the avoidance of doubt, should an additional blast be required after a blast misfire, this additional blast and the blast misfire are counted as a single blast. In circumstances of recurring unfavourable weather condition (following planned but not completed blast events), to avoid excess explosive sleep times and minimise any potential environmental impacts, the Applicant may seek agreement from the Secretary for additional blasts to be fired on a given day. 	Section 5.2.2											
Sch. 3 Cond. 9	The Applicant shall not carry out more than 1 blast a day within 500 metres of the Putty Road.	Section 5.2.3											
Sch. 3 Cond. 10	<p>Property Inspections If the Applicant receives a written request from the owner of any privately-owned land within 2 kilometres of the approved open cut mining pit/s on site for a property inspection to establish the baseline condition of any buildings and/or structures on his/her land, or to have a previous property inspection updated, then within 2 months of receiving this request the Applicant shall:</p> <ol style="list-style-type: none"> Commission a suitably qualified, experienced and independent person, whose appointment is acceptable to both parties to: <ul style="list-style-type: none"> Establish the baseline condition of any buildings and other structures on the land, or update the previous property inspection report; and Identify measures that should be implemented to minimise the potential blasting impacts of the development on these buildings and/or structures; and Give the landowner a copy of the new or updated property inspection report. 	Section 6.1											

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
	<p>If there is a dispute over the selection of the suitably qualified, experienced and independent person, or the Applicant or the landowner disagrees with the findings of the property inspection report, either party may refer the matter to the Secretary for resolution.</p>	
Sch. 3 Cond. 11	<p>Property Investigations</p> <p>If the owner of any privately-owned land claims that buildings and/or structures on his/her land have been damaged as a result of blasting on the site, then within 2 months of receiving this claim the Applicant shall:</p> <ol style="list-style-type: none"> a) Commission a suitably qualified, experienced and independent person, whose appointment is acceptable to both parties to investigate the claim; and b) Give the landowner a copy of the property inspection report. <p>If this independent property investigation confirms the landowner's claim, and both parties agree with these findings, then the Applicant shall repair the damage to the satisfaction of the Secretary.</p> <p>If there is a dispute over the selection of the suitably qualified, experienced and independent person, or the Applicant or the landowner disagrees with the findings of the independent property investigation, then either party may refer the matter to the Secretary for resolution.</p>	Section 6.2
Sch. 3 Cond. 12	<p>Operating Conditions</p> <p>During mining operations on site, the Applicant shall:</p> <ol style="list-style-type: none"> a) Implement all reasonable and feasible measures to: <ul style="list-style-type: none"> • Protect the safety of people and livestock in the surrounding area; • Protect public or private infrastructure / property in the surrounding area from any damage; and • Minimise the dust and fume emissions of any blasting; b) Ensure that blasting on the site does not damage any historic heritage sites; c) Minimise the frequency and duration of any road closures, and avoid road closures during peak traffic periods; and d) Operate a suitable system (including a hotline and website updates) to enable the public to get up-to-date information on the proposed blasting schedule on site, <p><i>Note: To identify the historic heritage sites referred to in this condition, see the applicable figures in Appendix 4.</i></p>	Sections 3.2, 5.2.3 5.2.2 and 5.2.3
Sch. 3 Cond. 13	<p>The Applicant shall not undertake blasting on site within 500m of:</p> <ol style="list-style-type: none"> a) Any public road; or b) Any land outside the site that is not owned by the Applicant, unless: <ul style="list-style-type: none"> • The Applicant has a written agreement with the applicable infrastructure authority or landowner to allow blasting to be carried out closer to the infrastructure or land, and the Applicant has advised the Department in writing of the terms of this agreement, or • The Applicant has: <ul style="list-style-type: none"> ○ Demonstrated to the satisfaction of the Secretary that the blasting can be carried out closer to the infrastructure or land without compromising the safety of the people or livestock, or damaging the buildings and/or structures; and ○ Updated the Blast Management Plan to include the specific measures that would be implemented while blasting is being carried out within 500 metres of the road or land. 	Section 5.2 Appendix D
Sch. 3 Cond. 14	<p>Blast Management Plan</p> <p>The Applicant shall prepare a Blast Management Plan for the development to the satisfaction of the Secretary, and carry out the development in accordance with this plan This plan must:</p>	This BMP Section 3.1.1

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
	<ul style="list-style-type: none"> a) Be prepared in consultation with the EPA, and submitted to the Secretary for approval prior to carrying out any development under this consent; b) Describe the measures that would be implemented to ensure compliance with the blasting criteria and operating conditions of this consent; c) Include a road closure management plan for blasting within 500 metres of a public road, that has been prepared in consultation with RMS and Council; d) Include a monitoring program for evaluating the performance of the development, including <ul style="list-style-type: none"> • Compliance with the applicable criteria; • Avoiding any blasting impacts on the heritage items specified in condition 12 above; and • Minimising the fume emissions from the site. 	Section 5 Appendix D Appendix E
Sch. 4 Cond. 3	<p>As soon as practicable after obtaining monitoring results showing:</p> <ul style="list-style-type: none"> a) An exceedance of any relevant criteria in Schedule 3, the Applicant shall notify affected landowners in writing of the exceedance, and provide regular monitoring results to each affected landowner until the development is again complying with the relevant criteria. 	Section 7.1.2.1
Sch. 4 Cond. 4	<p>Independent Review</p> <p>If an owner of privately-owned land considers the development to be exceeding the criteria in schedule 3 at his/her land, then he/she may ask the Secretary in writing for an independent review of the impacts of the development on his/her land.</p> <p>If the Secretary is satisfied that an independent review is warranted, then the Applicant shall:</p> <ul style="list-style-type: none"> a) Commission a suitably qualified, experienced and independent expert, whose appointment has been approved by the Secretary, to: <ul style="list-style-type: none"> • Consult with the landowner to determine his / her concerns; • Conduct monitoring to determine whether the development is complying with the relevant impact assessment criteria in schedule 3; and • If the development is not complying with these criteria then: <ul style="list-style-type: none"> ○ Determine if more than one mine is responsible for the exceedance, and if so the relative share of each mine regarding the impact on the land; ○ Identify the measures that could be implemented to ensure compliance with the relevant criteria; and b) Give the Secretary and landowner a copy of the independent review within 2 months of the Secretary's decision, unless the Secretary agrees otherwise. 	Section 6.3
Sch. 5 Cond. 2	<p>Adaptive Management</p> <p>The Applicant must assess and manage development-related risks to ensure that there are no exceedances of the criteria and/or performance measures in Schedule 3. Any exceedance of these criteria and/or performance measures constitutes a breach of this consent and may be subject to penalty or offence provisions under the EP&A Act or EP&A Regulation.</p> <p>Where any exceedance of these criteria and/or performance measures has occurred, the Applicant must, at the earliest opportunity:</p> <ul style="list-style-type: none"> a) Take all reasonable and feasible steps to ensure that the exceedance ceases and does not recur; b) Consider all reasonable and feasible options for remediation (where relevant) and submit a report to the Department describing those options and any preferred remediation measured or other course of action; and c) Implement remediation measures as directed by the Secretary. 	Section 5.4
Sch. 5 Cond. 3	<p>Management Plan Requirements</p> <p>The Applicant shall ensure that the management plans required under this consent are prepared in accordance with any relevant guidelines, and include:</p>	Appendix F

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
	a) Detailed baseline data;	Section 2
	b) A description of <ul style="list-style-type: none"> • The relevant statutory requirements (including any relevant consent, licence or lease conditions); • Any relevant limits or performance measures / criteria; • The specific performance indicators that are proposed to be used to judge the performance of, or guide the implementation of, the development of any management measures; 	Section 5 Appendix E Section 5.4
	c) A description of the measures that would be implemented to comply with the relevant statutory requirements, limits, or performance measures / criteria;	Section 7.2
	d) A program to monitor and report on the: <ul style="list-style-type: none"> • Impacts and environmental performance of the development; • Effectiveness of any management measures (see c above) 	Section 7.3
	e) A contingency plan to manage any unpredicted impacts and their consequences;	
	f) A program to investigate and implement ways to improve the environmental performance of the development over time;	
	g) A protocol for managing and reporting any: <ul style="list-style-type: none"> • Incidents; • Complaints; • Non-compliances with statutory requirements; and • Exceedances of the impact assessment criteria and/or performance criteria; and 	
	h) h) A protocol for periodic review of the plan.	
	<i>Note: The Secretary may waive some of these requirements if they are unnecessary or unwarranted for particular management plans.</i>	
Sch. 5 Cond. 4	<p>Annual Review By the end of March each year, the Applicant shall review the environmental performance of the development for the previous calendar year to the satisfaction of the Secretary. This review must:</p> <ul style="list-style-type: none"> a) Describe the development (including any rehabilitation) that was carried out in the past calendar year, and the development that is proposed to be carried out over the current calendar year; b) Include a comprehensive review of the monitoring results and complaints records of the development over the past year, which includes a comparison of these results against the <ul style="list-style-type: none"> • The relevant statutory requirements, limits or performance measurements / criteria; • The monitoring results of previous years; and • The relevant predictions in the EIS; c) Identify any non-compliance over the last year, and describe what actions were (or are being) taken to ensure compliance; d) Identify any trends in the monitoring data over the life of the development; e) Identify any discrepancies between the predicted and actual impacts of the development, and analyse the potential cause of any significant discrepancies; and f) Describe what measures will be implemented over the next year to improve the environmental performance of the development. 	Section 7.1.2.2

Consent Condition	Environmental Performance Conditions	Section of BMP which addresses this requirement
Sch. 5 Cond. 5	<p>Review of Strategies, Plans and Programs Within 3 months of the submission of an:</p> <ul style="list-style-type: none"> a) Annual review under condition 4 above; b) Incident report under condition 7 below; c) Audit under condition 9 below; and d) Any modification to the conditions of this consent (unless the conditions require otherwise), <p>The Applicant shall review, and if necessary revise, the strategies, plans and programs required under this consent to the satisfaction of the Secretary. Where this review leads to revisions in any such document, then within 4 weeks of the review, unless the Secretary agrees otherwise, the revised document must be submitted to the Secretary for approval.</p> <p><i>Note: This is to ensure the strategies, plans and programs are updated on a regular basis, and incorporate any recommended measures to improve the environmental performance of the development.</i></p>	Section 7.3
Sch. 5 Cond. 7	<p>Incident Reporting The Applicant shall notify the Secretary and any other relevant agencies of any incident. Within 7 days of the date of the incident, the Applicant shall provide the Secretary and any relevant agencies with a detailed report on the incident, and such further reports as may be requested.</p>	Section 5.4
Sch. 5 Cond. 8	<p>Regular Reporting The Applicant shall provide regular reporting on the environmental performance of the development on its website, in accordance with the reporting arrangements in any plans or programs approved under the conditions of this consent.</p>	Section 7.1.2.2
Sch. 5, Cond. 11	<p>Access to Information From the commencement of development under this consent, The Applicant shall:</p> <ul style="list-style-type: none"> a) Make copies of the following publicly available on its website: <ul style="list-style-type: none"> • The EIS; • Current statutory approvals for the development; • Approved strategies, plans or programs required under the conditions of this consent; • A comprehensive summary of the monitoring results of the development, reported in accordance with the specifications in any conditions of this consent, or any approved plans and programs; • A complaints register, which is to be updated monthly; • Minutes of CCC meetings; • The annual reviews of the development (for the last 5 years, if applicable); • Any independent environmental audit of the development, and the Applicant’s response to the recommendations in any audit; • Any other matter required by the Secretary; and <p>Keep this information up to date.</p>	Section 7.1.2.2

Table 2 - Environment Protection Licence Conditions addressed in this BMP

L5.1	The airblast overpressure level from blasting operations in or on the premises must not exceed: 115dB (Lin Peak) for more than 5% of the total number of blasts during each reporting period; at either monitoring point 4, 5, 6, 7 or 8 in Condition P1.4.	Appendix E																					
L5.2	The airblast overpressure level from blasting operations in or on the premises must not exceed: 120dB (Lin Peak) at any time; at either monitoring point 4, 5, 6, 7 or 8 in Condition P1.4.	Appendix E																					
L5.3	The ground vibration peak particle velocity from blasting operations carried out in or on the premises must not exceed: 5mm/s for more than 5% of the total number of blasts during each reporting period; at either monitoring point 4, 5, 6, 7 or 8 in Condition P1.4.	Appendix E																					
L5.4	The ground vibration peak particle velocity from blasting operations carried out in or on the premises must not exceed: 10mm/s at any time, at either monitoring point 4, 5, 6, 7 or 8 in Condition P1.4.	Appendix E																					
L5.5	Blasting in or on the premises must only be carried out between 0700 hours and 1800 hours, Monday to Saturday. Blasting in or on the premises must not take place on Sundays or Public Holidays without the prior approval of the EPA.	Section 5.2.1																					
L5.6	Offensive blast fume must not be emitted from the premises. <i>Definition:</i> <i>Offensive blast fume means post-blast gases from the detonation of explosives at the premises that by reason of their nature, duration, character or quality, or at the time at which they are emitted, or any other circumstances:</i> <ol style="list-style-type: none"> Are harmful to (or likely to be harmful to) a person that is outside the premises from which it is emitted, or Interferes unreasonably with (or is unlikely to interfere unreasonably with) the comfort or repose of a person who is outside the premises from which it is emitted. 	Appendix C																					
M1.1	The results of any monitoring required to be conducted by this licence or a load calculation protocol must be recorded and retained as set out in this condition.	Appendix E																					
M1.2	All records required to be kept by this licence must be: <ol style="list-style-type: none"> a) in a legible form, or in a form that can readily be reduced to a legible form; b) kept for at least 4 years after the monitoring or event to which they relate took place; and 	Appendix E																					

EPL reference	Environmental Performance Condition	Where Condition is addressed												
	c) produced in a legible form to any authorised officer of the EPA who asks to see them.													
M1.3	The following records must be kept in respect of any samples required to be collected for the purposes of this licence: a) the date(s) on which the sample was taken; b) the time(s) at which the sample was collected; c) the point at which the sample was taken; and d) the name of the person who collected the sample.	Appendix E												
M5.1	The licensee must keep a legible record of all complaints made to the licensee or any employee or agent of the licensee in relation to pollution arising from any activity to which this licence applies.	Section 7.2												
M5.2	The record must include details of the following: a) The date and time of the complaint; b) The method by which the complaint was made; c) Any personal details of the complainant which were provided by the complainant, or if no such details were provided, a note to that effect; d) The nature of the complaint; e) The action taken by the licensee in relation to the complaint, including any follow-up contact with the complainant; and f) If no action was taken by the licensee, the reasons why no action was taken.	Section 7.2												
M5.3	The record of a complaint must be kept for at least 4 years after the complaint was made.	Section 7.2												
M5.4	The record must be produced to any authorised officer of the EPA who asks to see them.	Section 7.2												
M8.1	To determine compliance with condition(s) L5.1, L5.2, L5.3 and L5.4: a) Airblast overpressure and ground vibration levels must be measured and electronically recorded for monitoring points 4, 5, 6, 7 and 8 for the parameters specified in Column 1 of the table below; and b) The licensee must use the units of measure, sampling method, and sample at the frequency specified opposite in the other columns.	Appendix E												
	<table border="1" data-bbox="301 1178 1347 1339"> <thead> <tr> <th>Parameter</th> <th>Units of Measure</th> <th>Frequency</th> <th>Sampling Method</th> </tr> </thead> <tbody> <tr> <td>Airblast Overpressure</td> <td>Decibels (Linear Peak)</td> <td>All blasts</td> <td>Australian Standard AS 2187.2-2006</td> </tr> <tr> <td>Ground Vibration Peak Particle Velocity</td> <td>millimetres/second</td> <td>All blasts</td> <td>Australian Standard AS 2187.2-2006</td> </tr> </tbody> </table>	Parameter	Units of Measure	Frequency	Sampling Method	Airblast Overpressure	Decibels (Linear Peak)	All blasts	Australian Standard AS 2187.2-2006	Ground Vibration Peak Particle Velocity	millimetres/second	All blasts	Australian Standard AS 2187.2-2006

1.3 Objectives

The purpose of this BMP is to provide reasonable and feasible measures to address potential blasting impacts of the Project as identified in the Approvals and satisfy the relevant conditions of the Approvals.

This BMP describes procedures required to ensure compliance with the Approval conditions relating to blasting impacts. This BMP also provides a mechanism for assessing blast monitoring results against the relevant blast impact assessment criteria.

The key elements of the mitigation strategies will be:

- to ensure that blast design incorporates controls on the maximum instantaneous charge to ensure blasting-induced vibration is within acceptable limits (this will also be addressed through monitoring); and
- managing key environmental issues associated with air blast overpressure and vibration impacts as a result of operational activities that may affect:
 - Communities (Warkworth, Bulga, Long Point, Hambledon Hill, Mount Thorley);
 - Residences within zone of affectation;
 - Residences beyond zone of affectation;
 - Neighbouring mines; and
 - Sensitive infrastructure.
- The objectives of this BMP are to:
- Meet the requirements of the Approvals;
- Set out the notification procedure;
- Describe the process for assessing real-time weather conditions prior to blasting;
- Set out the hours of blasting;
- Ensure good blast design and evacuation procedures are in place to ensure safety from fly rock;
- Set out a Road Closure Management Plan (see **Appendix D**);
- Describe the monitoring programme and how it will be implemented and maintained (**Appendix E**);
- Detail the controls to be implemented to minimise blasting impacts off site;
- Manage community complaints in a timely and effective manner; and
- Detail the procedure for reporting blast criteria exceedances to relevant stakeholders.

2. REGULATORY REQUIREMENTS

2.1 Background

This BMP has been prepared to fulfil the requirements of relevant legislation, the Approvals, EA commitments, EPL conditions and relevant standards and guidelines.

2.1.1 Project Approvals

The Approvals and subsequent amendments were assessed under the *Environmental Planning and Assessment Act 1979* (NSW) (EP&A Act.). Development Consent for the Warkworth Continuation Project (SSD-6464) and Mount Thorley Continuation Project (SSD-6465) was granted on 26th November 2015. A modification to the Warkworth Continuation Project (SSD-6464 MOD2) was granted on 27 May 2022.

The Approvals stipulate the blasting criteria that operational activities at MTW must comply with.

2.1.2 Environmental Protection Licences

The *Protection of the Environment Operations Act 1997* (NSW) (PoEO Act) is the principal piece of legislation regulating pollution emissions in NSW.

EPLs 1376 for Warkworth Coal Mine (issued on 21 August 2000) and 1976 for Mount Thorley Operations (issued on 28 September 2000) stipulate a range of conditions relating to Blasting. These conditions are reproduced in **(Table 2)**.

While the primary intent of this BMP is to describe the measures which will be implemented to ensure compliance with the relevant conditions of MTW's Planning Approvals, the EPL requirements are also listed for completeness.

2.1.3 Dangerous Goods

Dangerous goods are regulated under the *Work Health and Safety Act 2011* (NSW) and *Explosives Act 2003* (NSW). MTW will ensure that all regulatory requirements in relation to dangerous goods

management are met. The storage of explosives or explosive precursors, are to be managed in accordance with MTW's work instructions and site procedures such as MTW-10-WI-MINE-244-011 'Firing a Shot'. These are internal documents which are regularly updated.

3. CONSULTATION

The relevant conditions of the Approvals detailing the requirements for this BMP stipulate the agencies and parties to be consulted during the preparation of this BMP.

3.1 Government Agencies

3.1.1 EPA

In a letter dated 8 February 2023 regarding BMP version 5.2, the EPA advised "The EPA has not reviewed and has no comments on the Blast Management Plan. The EPA's role, as a regulatory authority, is to set environment objectives rather than being involved in the development of strategies to achieve those objectives. The development of such plans by proponents and licensees is encouraged by the EPA, to ensure they have determined how they will meet their statutory obligations and environmental objectives." (see **Appendix A**).

3.1.2 Singleton Council (SC)

MTW holds approval from Singleton Council (SC) allowing for closure of the Golden Highway (Jerry's Plains Road), Putty Road, Wallaby Scrub Road, Gouldsville Road and Charlton Road.

These approval instruments are included in the Road Closure Management Plan (**Appendix D**).

Please note: The Singleton Council approvals will be included in **Appendix D** of the BMP as they are updated. An update to Singleton Council Road Closure Approvals in Appendix D will not trigger submission of an updated BMP to the Department of Planning, Housing and Infrastructure (DPHI), but rather enable the current Singleton Council licences to be viewed. Any material change to road closures, however, will trigger submission of an updated BMP.

3.1.3 Transport for NSW (TfNSW)

The current MTW Road Closure Management Plan was submitted to the Roads & Maritime Service (RMS, now TfNSW) following the (then approved) Warkworth Extension Project).

The Plan has been revised following the approval of the Warkworth Continuation and Mt Thorley Operations 2014 Projects, and submitted to RMS for further comment. No concerns were raised from feedback during consultation.

MTW holds Road Occupancy Licences allowing for the closure of the Putty Road and Golden Highway. The licenses are included in the Road Closure Management Plan (**Appendix D**). Please note: The Road Occupancy Licences will be included in Appendix D of the BMP as they are updated. An update to the Road Occupancy Licences in Appendix D will not trigger submission of an updated BMP to DPHI, but rather enable the current licences to be viewed. Any material change to road closures, however, will trigger submission of an updated BMP.

4. EXISTING CHARACTER & IMPACT ASSESSMENT CRITERIA

4.1 Existing Character

Mt Thorley Warkworth (MTW) is an integrated operation of two open cut mines, Warkworth Mining

Limited (WML) and Mt Thorley Operations (MTO) which are located adjacent to each other and 15 km south west of Singleton in the Hunter Valley region of New South Wales.

The operation supplies international and domestic markets with semi-soft coking coal and thermal coal. MTW is partially bounded by public roads – the Golden Highway alongside the Northern and Eastern WML boundary, Charlton Roads to the West of MTO, and Wollombi Brook to the West of WML. The operation is bisected by Putty Road, WML to the North of the road, and MTO to the South.

MTO shares its southern boundary with the adjoining Glencore Bulga Coal Surface Operations (BCSO).

Surrounding land uses include Mining (nearby operations include Bulga Coal, Wambo Coal and Hunter Valley Operations), agriculture (to the east in the areas of Mt Thorley and Hambledon Hill),

Industrial pursuits in the Mt Thorley Industrial Estate, and nearby residential communities of Bulga, Milbrodale, Warkworth and Long Point.

The township of Singleton is located approximately 7km to the east of WML. An overview of the layout of MTW is presented in **Figure 1**.

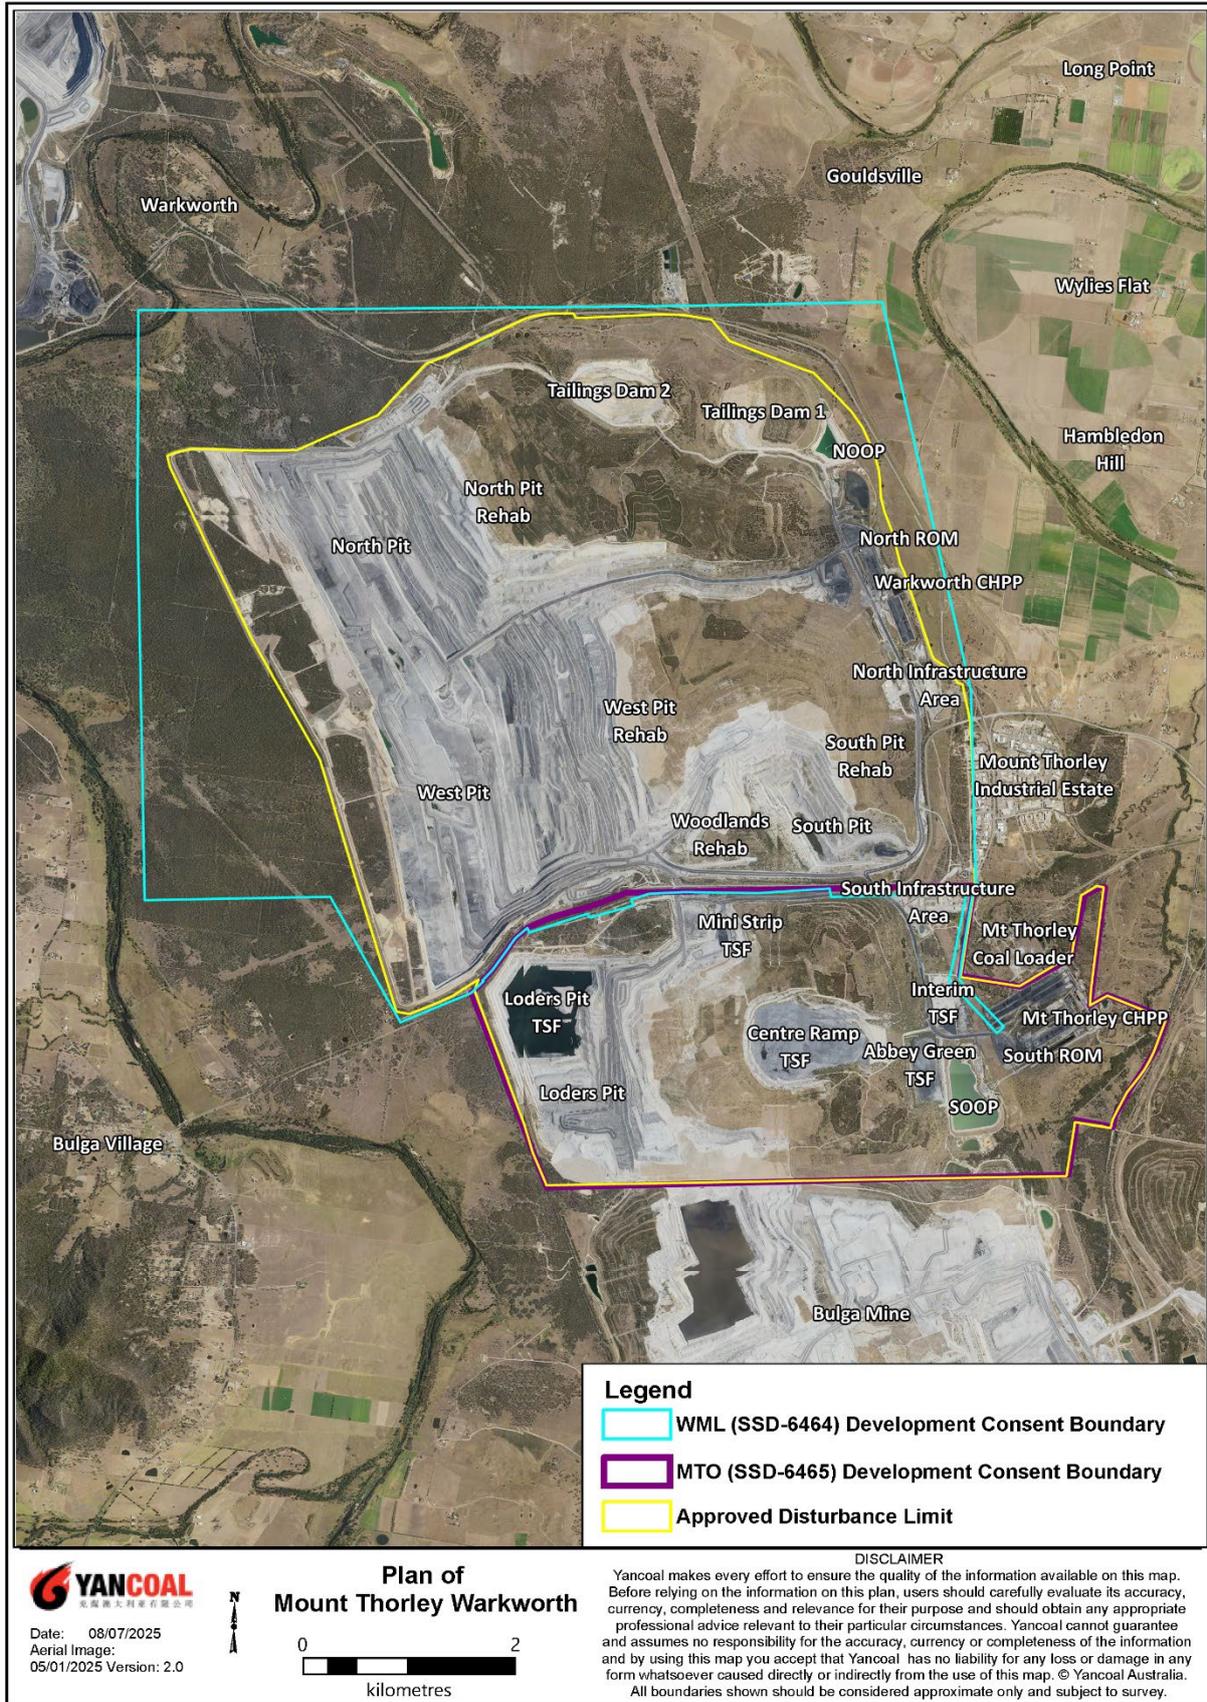

Figure 1 - Layout of MTW

4.2 Impact Assessment Criteria

4.2.1 Residence on Privately Owned Land

The Approvals and EPLs specify airblast overpressure impact assessment criteria and ground vibration impact assessment criteria for residences on privately-owned land (**Table 1**).

The Blast Monitoring Programme describes the monitoring locations which have been selected to ensure accurate assessment of airblast overpressure and ground vibration impacts in the vicinity of the nearest privately owned residences.

4.2.2 Public Infrastructure

Bulga Bridge (spanning Wollombi Brook on the Putty Road, to the West of MTW) is the only public infrastructure considered to be within such proximity to MTW for consideration under this BMP.

A report by Enviro Strata consulting and dated 27 June 2012, commissioned in association with the (then approved) Warkworth Extension Project details an independent assessment of the potential impacts of that project on the Bulga Bridge.

The report is reproduced as **Appendix G**. The report recommends a ground vibration limit of 50mm/sec be applied to the bridge.

This recommendation however does not take account of the close proximity of local residents to the bridge.

Given the 5mm/sec (5%) and 10mm/sec limits assigned for all privately owned residences stipulated in the Approvals, a specific management limit of 50mm/sec is not considered valuable in this instance.

Accordingly, MTW will monitor ground vibration for all blasts at the existing “Bulga Village” monitoring location (situated approximately 180m from the centre of the bridge), allowing for assessment of impacts on

the bridge and nearby sensitive receptors simultaneously.

4.3 Heritage Features

4.3.1 St. Phillips Church

The Enviro Strata Consulting report dated 27 June 2012, commissioned in association with the (then approved) Warkworth Extension Project recommends a ground vibration limit of 5mm/sec be applied to St. Phillip’s Church.

The report is reproduced in Appendix G. Assessment of blasting impacts on St. Phillip’s Church will be assessed through ongoing monitoring undertaken at the “Warkworth” monitoring location (refer to **Appendix E**).

4.3.2 Wambo homestead

The Enviro Strata Consulting report dated 27 June 2012, commissioned in association with the (then approved) Warkworth Extension Project recommends a ground vibration limit of 5mm/sec be applied to Wambo Homestead.

Independent modelling of the blasts required for the extension was undertaken (refer to **Appendix G**), it was determined that ground vibration levels from MTW blasts will not reach a level to damage these structures or approach the vibration limit (5mm/s) for other mining operations which are in a closer proximity.

To ensure MTW blasts do not approach the criteria of 5mm/s limit with a 5% allowable exceedances during a 12 month period, there will be an internal threshold of 4 mm/s.

MTW will investigate additional measures if site law predictions for Wambo Homestead consistently reach 4mm/sec.

4.3.3 Aboriginal Grinding Groove sites

The WML Approval (Condition 14(b) in Schedule 3) lists four grinding groove sites that require specific management measures to prevent unexpected impacts from blasting.

A report by Enviro Strata Consulting dated 27 June 2012, and commissioned in association with the (then approved) Warkworth Extension Project, investigated these four sites in detail to assess likely blasting impacts and propose the management measures required to ensure blasting impacts are avoided. The grinding groove sites and proposed management measures are described in **Table 3**. The Enviro Strata Consulting report is reproduced as **Appendix G**.

Table 3 - Aboriginal Grinding Groove site management

Site / Reference	Location	Management Strategy
MTW-266~WSW-09-22(266)	Proximity to Wollombi Brook	Remain in-situ
MTW-267~WSW-09-22(267)	Proximity to Wollombi Brook	Remain in-situ
MTW-268~WSW-09-22(268)	Proximity to Wollombi Brook	Remain in-situ
M 37-6-0163 (Site M)	East of Wallaby Scrub Road	Relocated during 2018

Sites 266, 267 and 268 are not considered at risk of ground vibration or flyrock impacts. Regarding these sites, the Enviro Strata Consulting report concludes:

“in view of a substantial distance from the proposed pit there will be no risks from blasting. In this case, the distance alone will provide a sufficient buffer.”

Site M grinding grooves were relocated during the 2018 reporting period in accordance with the site’s

approved Aboriginal Heritage Management Plan (AHMP).

5. BLAST MANAGEMENT CONTROLS

5.1 Introduction

In order to mitigate any potential impacts from blasting activities, MTW will implement a number of management controls throughout the life of MTW operations. The management controls / measures are derived from the principles outlined in Section 11.5 of the Warkworth Continuation 2014 Environmental Impact Statement. These controls are detailed in Section 5.2 below.

5.2 Operational controls

MTW will implement the following blast management practices over the life of the project:

5.2.1 Permissible Blasting Hours

Blasting at MTW is permissible between the hours of 7am and 5pm, Monday to Saturday inclusive. Blasting will be undertaken in accordance with the blasting frequency limits specified in the approvals:

- WML – 3 blasts per day, and 12 blasts per week (averaged over a calendar year), and not more than 1 blast per day within 500m of the Putty Road and/or Golden Highway and
- MTO – 2 blasts per day, and 6 blasts per week (averaged over a calendar year), and not more than 1 blast per day within 500m of the Putty Road.

It should be noted that blast misfires, blasts required to ensure the safety of the mine, workers, or general public, or blasts which generate less than 0.5mm/sec ground vibration at any private residence are not subject to the above conditions.

The approvals stipulate circumstances in which application can be made to the Planning Secretary to enable blasting to be undertaken outside of the above

conditions, including blasts required to be fired to avoid perverse environmental outcomes such as blast fume where unfavourable weather prevents completion of planned blasts.

No blasting will be undertaken on Sundays, public holidays or any other time, unless written approval is obtained from the Planning Secretary. In such circumstances (possible under extraordinary circumstances), MTW will also endeavour to telephone the DPHI Singleton office and the EPA to seek verbal approval from the regulatory authorities.

- DPHI Singleton Compliance Office – (02) 6575 3400
- Environment Protection Authority Newcastle Office – (02) 4908 6800, or self-report line 131 555

5.2.2 Meteorological considerations

Blasting is scheduled and undertaken in a responsible manner, taking account of best available weather forecast information as follows:

- 4 – 7 days in advance of blasting – scheduling undertaken in consideration of forecast meteorological conditions (use of publicly available forecast information);
- 1 – 3 days in advance of blasting - site specific blast plume predictions and updated weather forecast information is used to refine the blast schedule, taking account a range of factors such as shot size and location, requirement for closure of public roads, and risk-assessed likelihood of dust / fume associated with the blast;
- Morning of the planned blast – Site specific blast plume predictions are used to determine the optimum time for firing.
- Approaching blast detonation - review of the blasting permissions page for the appropriate Pit area (see **Appendix B**) which considers wind speed and wind direction relative to sensitive receptors and public roads;

- There may be circumstances where blasts may need to be fired in less than ideal weather conditions. In these circumstances MTW will take additional controls to minimise impacts such as implementation of exclusion zones. Such decisions will be taken at the appropriate level of the organisational hierarchy;

5.2.3 Best Practice measures

- Ensuring adequate burden is present on all faces. Where necessary face surveying (laser profiling) techniques will be employed to measure overburden between the blast face and blast holes to ensure sufficient burden is present to prevent blowouts and blast anomalies; Use of adequate stemming lengths; and of suitable quality material for all blasts;
- Management of blast fume in accordance with the MTW Post-blast fume generation mitigation and management plan;
- MTW will monitor blasts as mining progresses, in accordance with the existing blast monitoring system, so that blast prediction site laws can be further refined and future blast designs can be optimised based on more detailed site information; and
- Where possible, and for investigative purposes MTW will collect photos and video footage of blasts, including images of blast plumes in the event of offsite migration.

5.2.4 Notifying Interested Parties

- The Blasting Schedule Hotline is the primary tool by which members of the public can find information relating to MTW temporary road closures. MTW uses its best endeavours to align the road closure with the advertised time and limit the road closure duration to minimise inconvenience to road users. It should be noted however that the primary concern for MTW is to mitigate safety and environmental impacts from blasting, hence this will take precedence over adherence to road closure scheduling.

A number of factors including meteorological conditions, operations impediments and unforeseen circumstances on the public road will often result in road closures being brought forward or delayed from the scheduled time.

Advertised road closure times publicised via the methods described herein represent MTW's best assessment of the likely blasting time at the time of publish, and are subject to change.

- The hotline is updated on the morning of each day on which there is a scheduled road closure and can be reached on (freecall) **1800 099 669**. The hotline will advise of a one hour window for the proposed road closure (e.g. between 10am and 11am);
- In the event that a road closure is to occur outside the blasting window, and once the revised time is understood, MTW will update the hotline for another one hour window;
- Where mandated, notice of temporary road closures will be provided via the posting of signs on the affected road(s) in the 24 hours prior to blasting;
- Where necessary, information will be made available to neighbouring mines, relevant authorities (in the event of a road closure), and internal contacts prior to blasting.
- The blasting hotline number will be advertised in road closure notifications placed in local print media, as well as MTW's Daily Report website.

5.2.5 Monitoring and Administration

The monitoring and administration of blasting will include the following key aspects:

- Documentation of the date, location of the blast and quantity of explosive used each day;

- Detailed monitoring of blasts over the life of MTW at relevant blast sensitive locations (refer to **Appendix E**);
- Ad-hoc visual monitoring of blast events where pre-blast risk assessment identifies the need, including use of cameras situated on Charlton Ridge and WML Maintenance Workshop;
- Training will be provided to all relevant personnel on environmental obligations in relation to blasting controls.
- Periodic internal reviews of blast management procedures to evaluate performance and identify corrective action if required.

5.3 Management of Flyrock

The generation of fly rock is managed by MTW through incorporating appropriate controls in blast designs. These controls include design of stemming lengths and stemming materials to minimise the potential for generating flyrock.

Adequate burden, which is the distance from a charge to a free face, is maintained to minimise the risk of generating flyrock due to face bursting. These measures are used to minimise the risk of damage to property, equipment or infrastructure from flyrock.

Appropriate stemming will be used to improve stemming confinement and hence reduce the chance of flyrock and elevated airblast overpressure.

An appropriate exclusion zone will be established around each blast site in accordance with relevant mine safety regulations prior to firing a blast.

Generally, the blast exclusion zone will be a minimum of 300 metres for equipment and 500 metres for personnel. The exclusion zone will be established beyond the expected range of any fly rock with an additional safety margin. The establishment of this zone will minimise the risk of any injuries to people or livestock due to flyrock.

Where an unusual level of flyrock is generated by blasting, this information will be recorded and used to continually re-assess the adequacy of blast design controls in reducing the generation of flyrock. In the unlikely event that flyrock leaves the 500 metre personnel exclusion zone, the incident will be investigated and reported to the Resources Regulator. The information from the investigation will also be used to re-assess the size of the safety exclusion zone established for people and livestock in the vicinity of a blast.

5.4 Management of Unpredicted Impacts

5.4.1 Blast Fume

Blast fume is managed by MTW in accordance with the MTW Post-blast fume generation mitigation and management plan (see **Appendix C**).

5.4.2 Airblast overpressure / Ground Vibration exceedance

In the event that a blast event registers airblast overpressure or ground vibration results greater than the allowable limits, or significantly different from the predicted results, MTW will undertake a detailed investigation into the event.

Where corrective actions are identified to prevent a recurrence, these will be entered into the action management system, and tracked to completion.

5.5 Continuous Improvement

MTW will continuously seek to further improve blasting management through the following:

- Investigation into new and emerging technologies, implementing new controls where required;
- Learning from incidents and improving controls;
- Thoroughly investigating any exceedance and non-compliance events; and

- Review of blast monitoring data for emerging trends.

5.6 Monitoring Programme

Blast and vibration monitoring at MTW will be undertaken in accordance with the Blast Monitoring Programme set out in **Appendix E**. The monitoring programme includes a protocol for evaluating compliance with the blasting criteria in the approvals.

6. PROPERTY INVESTIGATIONS AND INSPECTIONS

6.1 Property Inspections

In accordance with Condition 12 of Schedule 3 (WML) and Condition 10 of Schedule 3 (MTO), MTW will undertake the actions as described to establish the baseline condition of buildings and/or structures, or to update a previous inspection.

6.2 Property Investigations

If MTW receives a written claim that buildings and/or structures on a landowners' land have been damaged as a result of blasting on site then MTW will investigate the claim and, where the property investigation confirms the landowner's claim, repair the damage in accordance with the requirements of Condition 13, Schedule 3 (WML) or Condition 11 of Schedule 3 (MTO) of the Approvals, whichever is relevant.

6.3 Independent Review Process

Where the owner of privately-owned land has reasonable grounds to believe that MTW (WML or MTO) is exceeding blast criteria, they may request an independent review from the Planning Secretary, as per Condition 4 of Schedule 4 of the Approvals. If the independent review determines that WML / MTO is not complying with the relevant criteria, then MTW will work in conjunction with the landowner and the Planning Secretary to develop and implement remedial actions as appropriate.

7. IMPLEMENTATION OF THE BMP

7.1 Reporting

7.1.1 Internal reporting

Determining exceedances of blasting criteria will be undertaken in accordance with the protocol for evaluating compliance (Blast Monitoring Programme), reproduced in **Appendix E**.

The Drill and Blast Engineer will report any potential or confirmed blast exceedance to relevant site personnel, including the Site Environment and Community Advisor and Manager – Mining. The initial advice will include an in-house assessment of meteorological conditions and the validity of the peak airblast overpressure and ground vibration results.

Where the peak results are confirmed to have occurred outside of the calculated arrival time window, no escalation of the possible exceedance will occur, and a theoretical value will be used in place of the measured peak.

Where the in-house assessment is unable to discount the result on the basis of meteorology or arrival time, the result will be referred to a specialist consultant for determination.

If there is a non-compliance with the blast impact assessment criteria an investigation will be undertaken, assessing the circumstances of the non-compliance. Resulting actions will be developed and assigned to the appropriate person, and tracked to completion.

7.1.2 External Reporting

7.1.2.1 Emergency / Non-compliance reporting

The Environment and Community Advisor will coordinate the reporting of any confirmed non-compliance in writing to the Department as soon as practicable following receipt of information confirming the non-compliance.

Airblast Overpressure / Ground vibration non-compliances will also be reported to the EPA as required.

The Environment and Community Advisor will also coordinate the reporting of any confirmed reportable blast fume events in line with the clarification note issued by the Department of Planning and Environment on 7 July 2014:

*“Notify the Department of Planning and Environment compliance office in Singleton of any blast producing post-blast fume that rates 3 at its highest extent and leaves the site (see definition below), and any blast that rates 4 or 5. It is not the intention that all shots required to be reported will require a formal incident report, as this will depend on a number of factors. Within this report the quantity of explosive and/or the number of blast holes should be included. The purpose of this is to provide a guide to size the fume event;
Site – includes any active mine site’s project approval boundary and any closed portion of public road.”*

In addition, in accordance with the relevant conditions of the Approvals, within seven days of becoming aware of the incident, MTW will provide the Secretary and any relevant agencies with a detailed report of the incident.

The report will include the following details:

- The date, time and nature of exceedance/incident;
- Identify the likely cause of exceedance/incident;
- Describe the response action that has been undertaken to date; and
- Describe the proposed measures to address the exceedance/incident.

MTW will implement mitigation measures for future blasts as necessary and will monitor future blasts for effectiveness and improvement opportunities.

In accordance with Condition 3 of Schedule 4 of the Approvals, as soon as practicable after obtaining monitoring results showing a non-compliance of the blasting criteria, MTW will notify the affected landowner and/or tenants in writing of the non-compliance, and provide regular monitoring results to each of these parties until the project is again complying with the relevant criteria.

7.1.2.2 Regular reporting

Blast monitoring data, collected in accordance with this BMP will be made available on MTW's website (<https://www.yancoal.com.au/our-sites/mount-thorley-warkworth/>) via the Monthly Environmental Management Report, and Annual Review.

Ground Vibration and Airblast Overpressure data will also be presented in the Monthly EPL monitoring data summary to satisfy the reporting requirements of the PoEO Act. Additionally, a report of Blast Monitoring will be provided to the EPA for MTO and WML at the end of each EPL Annual Return period to satisfy the reporting requirements of the relevant EPLs.

7.2 Complaints Management

Community Complaints are lodged via the Community Complaints line, **1800 656 892**.

The hotline number is prominently displayed on the MTW website and regularly advertised in the local newspaper. The Complaints Hotline operates 24 hours per day, seven days a week. Complaints will be recorded and investigated by MTW staff.

Complaints lodged via other means (letter, in person, fax etc.) will also be recorded and investigated by the Site Environment and Community Advisor.

Where the investigation identifies potential non-compliance with a consent or licence condition, action to mitigate the cause of the complaint will be taken.

The details of all complaints, and any mitigating actions taken, will be circulated to senior management and other key personnel. Where requested, follow-up correspondence with the complainant will be provided.

It is a condition of EPLs 1376 and 1976 that MTW maintain a register of pollution complaints. MTW maintains a register of all complaints, recording the following information (at minimum):

- Date and time of the complaint;
- Method by which the complaint was made;
- Any personal details of the complainant which were provided;
- The nature of complaint;
- Any action taken in relation to the complaint; and
- If no action, the reason why no action was taken.

A record of each complaint will be kept for a minimum of four years and will be produced on request to any authorised officer of the EPA.

A monthly summary of complaints received will be reported on MTW's website (<https://www.yancoal.com.au/our-sites/mount-thorley-warkworth/>).

7.3 Review of this Management Plan

This BMP will be reviewed within three months of the submission of the Annual Review and updated to the satisfaction of the Planning Secretary where necessary.

This BMP will also be reviewed and revised if necessary; within three months of the completion of an Independent Environmental Audit, following any non-compliance of the Approvals criteria or following any modification to the conditions of the Approvals.

The BMP may also be reviewed/revise at any time (e.g. other than at triggered events described above), to ensure it is updated on a regular basis.

Any major amendments to this BMP that affect its application will be undertaken in consultation with the

appropriate regulatory authorities and stakeholders, and to the satisfaction of the Planning Secretary. Minor changes such as formatting edits may be made with version control on the Project website.

7.4 Roles and Responsibilities

Table 9.1: Roles and Responsibilities¹

Manager – Environment & Community
<ul style="list-style-type: none">• Oversee the implementation of the BMP• Regulator liaison• Technical oversight
Manager – Mining
<ul style="list-style-type: none">• Direction and operational oversight
Dragline Drill and Blast Superintendent / Drill and Blast Engineer Superintendent
<ul style="list-style-type: none">• Implementation of operational aspects of Blast Management Plan• Co-ordination of incident investigations• Co-ordination of review of Road Closure Management Plan and Post-blast fume generation mitigation and management plan• Ensure update of the blasting hotline
Drill and Blast Engineer
<ul style="list-style-type: none">• Blast design and scheduling• Review of blast monitoring data and manual trigger of blast events• Investigation into blast exceedance, incidents and complaints• Maintain records for blasts initiated
Blast Supervisor
<ul style="list-style-type: none">• Blasting in accordance with this BMP and site procedures• Road closures
Community Response Officer
<ul style="list-style-type: none">• Visual observations and recording of blasts where possible
Environment and Community Advisor
<ul style="list-style-type: none">• Involvement in investigations of blasting exceedances, incidents or complaints with the Drill and Blast Engineer• Manage blasting related complaints in accordance with complaints management procedure• Implement and maintain the blast monitoring and real time environmental monitoring network• Coordinate periodic review of monitoring data and subsequent reporting• Implement and maintain blasting permissions pages and predictive forecast tools
Shot-firers
<ul style="list-style-type: none">• Notify the Drill and Blast Engineer and Blasting Supervisor of any factors that may lead to non-compliance with this BMP• Load and fire blasts in accordance with design supplied by the Drill and Blast Engineer

¹ Roles and responsibilities may be changed from time to time outside of the approval process of this BMP

Attention: Gary Mulhearn

8 February 2023

Dear Mr Mulhearn

No Comment – Mount Thornley Warkworth – Blast Management Plan

This letter replaces the letter dated 3 February 2023.

I refer to your request on 20 January 2023 regarding input from the NSW Environment Protection Authority (**EPA**) on the Post Approval Consultation for the Yancoal Mount Thornley Warkworth - Blast Management Plan (SSD-6464).

The EPA has not reviewed and has no comments on the Blast Management Plan. The EPA's role, as a regulatory authority, is to set environment objectives rather than being involved in the development of strategies to achieve those objectives.

The development of such plans by proponents and licensees is encouraged by the EPA, to ensure they have determined how they will meet their statutory obligations and environmental objectives.

If you have any questions about this matter, please contact Gabrielle Clark on (02) 8229 2822.

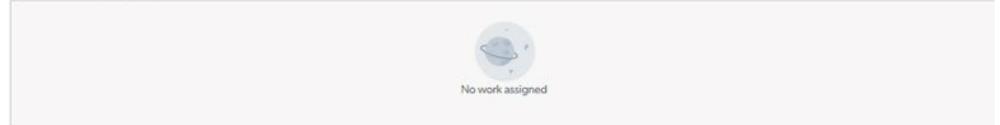

Yours sincerely

Engagement Notes

Dear EPA Officers,
This update to the MTW Blast Management Plan (BMP) is to address the outcome of a DPE investigation into a blast overpressure exceedance recorded at the Warkworth blast monitoring location. The investigation found that there are no residences on privately owned land in Warkworth, and DPE subsequently provided correspondence to agree that WML had not breached its development consent, however, is required to submit a revised management plan to the department which updates the blast monitoring program. A track changed version of the main BMP text and monitoring program is included with the submitted documents. The clean version of the BMP includes all appendices (which are unchanged from previous version).
It is also intended that a separate variation to Environment Protection Licence 1376 will be submitted which reflects the change to the Blast Monitoring Program. Please do not hesitate to contact me should you have any queries regarding the revised monitoring program.
Regards,
Gary Mulhearn

Message

Dear EPA Officers,

MTW has undertaken a routine update to the Blast Management Plan (BMP) which is a required management plan under development consents for the Warkworth Continuation Project (SSD-6464), and the Mount Thorley Continuation Project (SSD-6465).

A copy of the updated Blast Management Plan and two relevant appendices are provided as track changed documents (the main BMP text, and relevant appendices: the Road Closure Management Plan, and the Post Blast Fume Generation Mitigation and Management Plan). A clean version of the BMP is also provided which includes all appendices

Consultation with the EPA is required as a condition of each development consents. Please do not hesitate to contact me should you have any queries relating to the attached documents.

Regards,

Gary Mulhearn

1. Introduction

This document has been prepared to provide a protocol for the mitigation and management of post blast NOx fumes from blasting operations at Mt Thorley Warkworth (MTW) and is based on the AEISG Code of Practice (2011). This provides the basis on which to make blasting decisions to minimise the incident and severity of post blast fume events at MTW.

Figure 1: MTW Operations & local communities

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

2. NO_x Fume

All blasting explosives produce large volumes of gas in a very short time span (milliseconds).

The application of ammonium nitrate based blasting explosives in the field, under variable conditions, can lead to non-ideal explosive reactions and the production of Nitric oxide (NO) and Nitrogen dioxide (NO₂). Nitric oxide is unstable in air and readily oxidises to nitrogen dioxide. Nitrogen dioxide is identifiable by the generation of orange/brown clouds.

3. The causes of fume in blasting

Fumes are generated as a result of an explosive not reacting with a full, high order, steady state detonation. The causes of this are many and variable. This protocol groups causes into categories and further identifies controls that are best able to control the variable. The seven main categories that contribute to post blast fume are listed below in the order in which they are encountered in the mining process:

1. Geological conditions
2. Climate/seasonality.
3. Blast design.
4. Explosive product selection.
5. Explosive quality.
6. Contamination of explosive in the blast-hole.
7. On-bench practices.

4. Identification of persons to prevent fumes

This section identifies the persons in the organisation and their role in relation to ensuring post blast fume from blasts is minimised.

- Dragline Drill and Blast Superintendent
- Mine Planner
- Geologist
- Drill & Blast Engineer
- Drill Supervisor
- Drill Operator
- Shotfiring Supervisor
- Shotfirer
- Traffic Road Runner
- Trainee Shotfirer / Shotfirer Assistant
- MMU Operator
- Explosives Manufacturer/Supplier

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

Person	Role	Responsibilities/Remarks
Dragline Drill and Blast Superintendent	Manage all drill and blast operations for the site.	<p>Incorporation of process steps and hazards related to blast fume into Standard Operating Procedures for drilling, charging, stemming, blast guarding, post blast inspection</p> <p>Adequate resourcing of blasting activities.</p> <p>Reporting on the tracking of fume ratings to mine management</p> <p>Resolve any environmental blast permissions issues</p> <p>Risk review for extended fume management zone</p> <p>Escalate fume events to the appropriate level and team within MTW.</p>
Mine Planner	Plan the mine/pit operations to extract coal	Design extraction plan to minimise those blasting activities such as box cuts or blast areas that do not have a free face. Designs to consider separate removal of softer weathered horizons
Geologist	Provide data on ground conditions to assist blast designer with shot design	<p>Accurate provision of ground data across the proposed shot.</p> <p>Geology & rock mass conditions.</p>
Drill and Blast Engineer	Design a blast to provide good extraction of material while manage blasting hazards	<p>Maintenance of the site Blast Management Plan</p> <p>Maintain site design matrices, charging rules, procedures and workflow for design</p> <p>Conduct preload risk rating</p> <p>Blast design to consider:</p> <ul style="list-style-type: none"> • Conduct preload risk rating • Explosive product selection appropriate to ground and water conditions. • Geology & rock mass conditions. • Historical blast performance for the current area. • Weather conditions during loading and firing. <p>Conduct prefire risk rating</p> <p>Assist with risk review for extended fume management zone</p> <p>Capture blast videos; to be kept for at least one year.</p> <p>Measure post blast fume concentrations</p> <p>Post blast assessment and blast fume records including most likely cause of fume event and</p>

5. Causes & Control Matrix

The following matrix covers each potential causes and situations that may contribute to fume generation, identified in section 3 of this protocol. For each potential cause, a likely indicator and control measure is outlined.

Primary Cause 1: Geological conditions		
Potential Cause	Likely indicators	Control measures
Blasting in weak/soft strata (Incorrect Timing and Pattern Design)	<ul style="list-style-type: none"> • Specific areas known to contain weak/soft strata only • Excessive Powder Factor 	Understand geology of each shot and design blast (timing and explosive product) to ensure adequate relief in weak/soft strata, for example incorporation of a free face, reduction of powder factor, modified timing and increased stemming.
Explosive product seeping into cracks	<ul style="list-style-type: none"> • Slumping • Specific areas known to contain a high incidence of faulted/fractured ground only • Not achieving designed collar height when loading as per load sheet 	Consider manufacturer's recommendations on explosive product selection
		Consider use of blast hole liners or bag off above cracking
		Record and monitor blast holes which have slumped or require excessive explosive product to reach stemming height, but where water is not present.
Dynamic water in holes	<ul style="list-style-type: none"> • Slumped blast holes • Usually when using non water-resistant explosive products 	Minimise sleep time of shot
		Consider manufacturer's recommendations on explosive product selection
		Understand hydrology of pit and plan blasting to avoid interaction between explosives and dynamic water (either natural or from other pit operations) Check after pumping to understand recharge rate of the drill hole.
Moisture in clay	<ul style="list-style-type: none"> • When clay or clay rich strata present 	If the drill holes are defined as wet, then water resistant explosive products with appropriate energy will be used in the loading of these holes.

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

Blast hole deterioration between drilling and loading	<ul style="list-style-type: none"> Traceable to specific geological areas Dipped depth inconsistent with drilled depth indicating hole collapse 	Minimise time between drilling and loading
		Use hole savers
		Drill and Blast Engineer to ensure benches are unaffected by backbreak from earlier blasts, for example presplits, buffers etc.
		Optimise drilling practices to minimise hole damage.
Ground movement	<ul style="list-style-type: none"> Horizon offset (bench, etc.) Area previously known for misfires 	Design sequence timing to prevent hole movement and dislocation of explosives columns.

Primary Cause 2: Climate / seasonality		
Potential Cause	Likely indicators	Control measures
Rainfall on a sleeping shot.	<ul style="list-style-type: none"> Excessive rainfall Slumping of holes Ponding of water on pattern 	Review rainfall forecasts for planned sleep time of shot and select explosive products according to manufacturer's recommendations.
		Minimise sleep time for dry blast hole explosive products if rain is predicted. Consider early firing of blast.
		Bench design for water runoff with appropriate bunding & drainage.
		If a large rain event is predicted to impact on a live shot, than the top of blast holes will be protected to prevent water ingress by constructing contour drains to divert water away from hole collars with an excavator.
		Consider removing water affected product.
		Loaded drill holes are to be inspected for slumping prior to initiation after a rainfall event.

Plan

MTW Blast Fume Generation Mitigation and Management

Owner: Superintendent Drill & Blast Engineer

Document ID: MTW-10-PLAN-SITE-0013

Primary Cause 3: Blast Design		
Potential Cause	Likely indicators	Control measures
Explosive desensitisation due to the blast hole depth	<ul style="list-style-type: none">In deep holes only	Reduce bench height
		Ensure adequate relief in deep holes
		Consider manufacturer's recommendations on explosive product selection and blast design for deep holes
Inappropriate priming and/or placement	<ul style="list-style-type: none">Residue product	Consider manufacturer's recommendations on explosive product initiation, in general, top and bottom priming in holes greater than 15m deep.
Inter-hole explosive desensitisation	<ul style="list-style-type: none">Blast holes drilled closer together than plannedBlast hole deviation differs greatly from planned	Review the design and adjust for actual drilling
		Review product selection and adjust for new design
Intra-hole explosive desensitisation in decked blast holes	<ul style="list-style-type: none">When using decks only	Appropriate separation of explosive decks. Initiator timing.
Excessive confinement (Incorrect Timing and Pattern Design)	<ul style="list-style-type: none">Specific to blasts known to be confinedNo free face presentExcessive Powder Factor	Understand geology of each shot and design blast (timing and explosive product) to ensure adequate relief in all strata. Consider incorporation of a free face, reduction of powder factor, modified timing, depth of blast, etc.

Plan

MTW Blast Fume Generation Mitigation and Management

Owner: Superintendent Drill & Blast Engineer

Document ID: MTW-10-PLAN-SITE-0013

Primary Cause 4: Explosive product selection		
Potential Cause	Likely indicators	Control measures
Non water-resistant explosive products loaded into wet or dewatered holes	<ul style="list-style-type: none">Blasts containing wet/dewatered blast holes only	Consider manufacturer's recommendations on explosive product selection
		Education of bench crew on explosive product recommendations from current supplier
		Discipline in on-bench practices Follow load sheet
Excessive energy in strata desensitising adjacent explosive product columns	<ul style="list-style-type: none">Specific to areas known to contain weak/soft strata only	Understand geology of each shot and design blast (timing and explosive product) to match, for example reduction of powder factor.
		Consider manufacturer's recommendations on explosive product selection
		Obtain appropriate technical assistance if required to ensure optimal result
Primer of insufficient strength to initiate explosive column	<ul style="list-style-type: none">For blasts using a particular primer type / size	Consider manufacturer's recommendations on compatibility of initiating systems with explosives
Desensitisation of explosive column from in-hole detonating cord initiation	<ul style="list-style-type: none">In areas where in-hole cord initiation is used	Consider manufacturer's recommendations on compatibility of initiating systems with explosives

Plan

MTW Blast Fume Generation Mitigation and Management

Owner: Superintendent Drill & Blast Engineer

Document ID: MTW-10-PLAN-SITE-0013

Primary Cause 5: Explosive quality		
Potential Cause	Likely indicators	Control measures
Explosive product incorrectly formulated	<ul style="list-style-type: none">All areas associated with loading from a specific delivery systemProduct appearance abnormal	Explosives formulated by supplier to an appropriate oxygen balance to minimise the likelihood of post-blast fume Development and maintenance of an explosive QA/QC programme.
Inadequate mixing of raw materials	<ul style="list-style-type: none">In all areas associated with loading from a specific delivery systemProduct appearance abnormal	Visual check
		Density check MMU Calibration check
Delivery system metering incorrectly (on bench incorrect manufacture of product)	<ul style="list-style-type: none">All blasts and all locations utilising explosive product(s) that incorporate a specific precursor	Regular calibration of MMU
		Quality control of explosive products conducted in accordance with manufacturer's recommendations
Explosive precursors not manufactured or supplied to specification or degradation during transport and storage	<ul style="list-style-type: none">Traceable to a precursor which has degraded between manufacture and use	Contractor Management System – Audits of supplier to ensure compliance with QA/QC systems.

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

Initiation explosives not manufactured to specification or degradation during transport and storage	<ul style="list-style-type: none"> • Damaged packing or out- of-date stock • Misfire 	<p>MTW-09-TRAIN-MINE-0115 Explosives Operations Manual</p> <ul style="list-style-type: none"> • At time of stock-take or delivery, check manufacturing date of stock and condition of boxes • If there are multiple boxes of the same item open, the Magazine Keeper should (where possible) consolidate items into a single box to minimise the number of opened boxes, without exceeding the maximum quantity allowed for each box • Rotate stock in a systematic manner that ensures that older stock gets used first
Raw material changes	<ul style="list-style-type: none"> • All areas associated with loading from a specific delivery system • Product appearance changed 	<p>Change management procedures in place by suppliers</p> <p>Prior notification to suppliers from site change management systems where other raw materials are supplied by the customer, for example diesel fuels</p>
Product Degradation	<ul style="list-style-type: none"> • Slumping of holes 	<p>Sleeping a shot more than 4 days requires the approval by the Dragline Drill and Blast Superintendent.</p> <p>Any sleeping shot is inspected daily by the shot firer when in attendance.</p>

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

Primary Cause 6: Contamination of explosives in the blast hole		
Potential Cause	Likely indicators	Control measures
Explosive product mixes with mud/sediment at bottom of hole.	<ul style="list-style-type: none"> • Blasts containing wet/dewatered blast holes only • Dipped depth inconsistent with drilled depth indicating hole collapse 	Optimise drilling practices to minimise blast hole damage
		Ensure appropriate loading practices are followed during charging
		Ensure primer is positioned in undamaged explosive product
		Where mud or sediment is identified in a hole from dipping, a gas bag will be used to separate mud/sediment from explosive product.
		Use blast hole savers
Penetration of stemming material into top of explosive column (fluid/pumpable explosive products)	<ul style="list-style-type: none"> • Blasts charged with fluid/pumpable explosive products only 	Use appropriate stemming material
		Ensure explosive product is gassed to manufacturers specifications before stemming
Water entrainment in explosive product	<ul style="list-style-type: none"> • Blasts containing wet/dewatered blast holes only • Dynamic water present • Historical groundwater information 	Adjust explosive product selection according to manufacturer's recommendations depending on changing conditions.
		Ensure appropriate loading practices are followed during
		Eliminate top loading into wet blast holes that cannot be dewatered
		Ensure all primers are positioned in undamaged
		Use of gas bags in dewatered or contaminated blast holes

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

		Reduce excessive hose lubrication during charging.
		Adjust explosive product selection according to manufacturer's recommendations for wet environment.
		Verify correct hose handling practices are in place
		Load low blast holes last where practical
		Minimize sleep time where practical

Plan

MTW Blast Fume Generation Mitigation and Management

Owner: Superintendent Drill & Blast Engineer

Document ID: MTW-10-PLAN-SITE-0013

Primary Cause 7: On bench practices

Potential Cause	Likely indicators	Control measures
Hole condition incorrectly identified	<ul style="list-style-type: none">• Slumping of holes• Unexpected material in drill cuttings	Assess all holes prior to loading in particular presence and extent of any water
		Use number and location of wet holes as a basis for explosive product selection and determining loading sequence
		Minimise time between drilling and loading, especially in soft and clay strata. Note: Enough time should be allowed for any dynamic water in the hole to be identified
		Assess holes for slumping on any sleeping shots
	Minimise sleep time	
Blast not drilled as per plan	<ul style="list-style-type: none">• Can be correlated with incorrectly drilled patterns	Drillers to report holes not complying with plan. Verify drill hole accuracy in areas considered critical using drill hole positioning and recording system. Adjust design as necessary.
Dewatering of holes diverts water into holes previously loaded with dry hole explosive products	<ul style="list-style-type: none">• Visual inspections of water on bench.• Bench setup, understanding gradient of bench for	Load wet holes in a sequence that ensures other holes are not impacted. Adjust explosive product selection according to manufacturer's recommendations.

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

6. Management of fume

Due to the close proximity of the Putty Road, Charlton Road, Wallaby Scrub Road and Mount Thorley Industrial Estate to Mount Thorley Warkworth lease boundaries, blasting restrictions detailed in MTW-10-ENVMP-SITE-0011 MTW Blast Management Plan such as wind speeds and directions, are strictly observed. Any shot expected to produce fume that is in close proximity to the aforementioned public areas require a road closure as per MTW-Road Closure Management Plan

Within site boundaries, the blasting exclusion zone and sentry procedure takes into account the location of mine personnel on the lease at the time of detonation. A minimum 500 m exclusion zone is the standard for MTW however may be extended to any distance at the shotfirer's discretion. This includes reducing the risk of exposure to personnel downwind of a blast with the potential for fume.

The health and safety risks of blast fumes and information for treating medical staff is outlined in Appendix 3 & 4. In the event that a post-load risk rating indicates the likelihood of fume the following protocol is to apply.

Report / Record	Responsibility	Content
Identify factors contributing to potential fume	Drill and Blast Engineer	<ul style="list-style-type: none"> • Horizon history • Clay / weak material • Rain during loading • Holes slumping • Product selection issues • Product delivery issues • Excessive sleep time • Dynamic water
Defining Fume Management Zone	Competent group consisting of Superintendent, Supervisor, Engineer and Shotfirer – all persons inside the FMZ to be evacuated and area sentried prior to blast	<p>Extent of zone based on</p> <ul style="list-style-type: none"> • Likely fume level at blast to be assessed by group based on above factors • Wind speed and direction • Inversions • Cloud cover • Time of day • Atmospheric stability • Temperature • Humidity • Dispersion model (Fume dispersion site-law under development)

7. Documentation and records

The documentation and records used for the preparation and firing of a blast are retained in the Drill and Blast Office. The records contain:

Report / Record	Responsibility	Content
Blast design and performance record	Drill and Blast Engineer	<ul style="list-style-type: none"> • Blast Design • Drill Pattern Plans • Preload risk rating • Load Sheet • Blasting Schedule <ul style="list-style-type: none"> o Location of Blast o Type of Blast • Pre-fire risk rating • Video of blast <ul style="list-style-type: none"> o Operator is to ensure that filming continues post detonation, to ensure any potential fume or dust clouds are captured. • Environmental records <ul style="list-style-type: none"> • Air Blast • Vibration • Fume rating • Measured fume concentration and weather details • Video frame jpegs representative of plume dispersion • Monthly reconciliation of blasted volumes
Explosives stock control	Shotfirer	<ul style="list-style-type: none"> • Quantity (weight/numbers of units) of explosives delivered • Quantity (weight/numbers of units) of explosives used on a shot basis

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

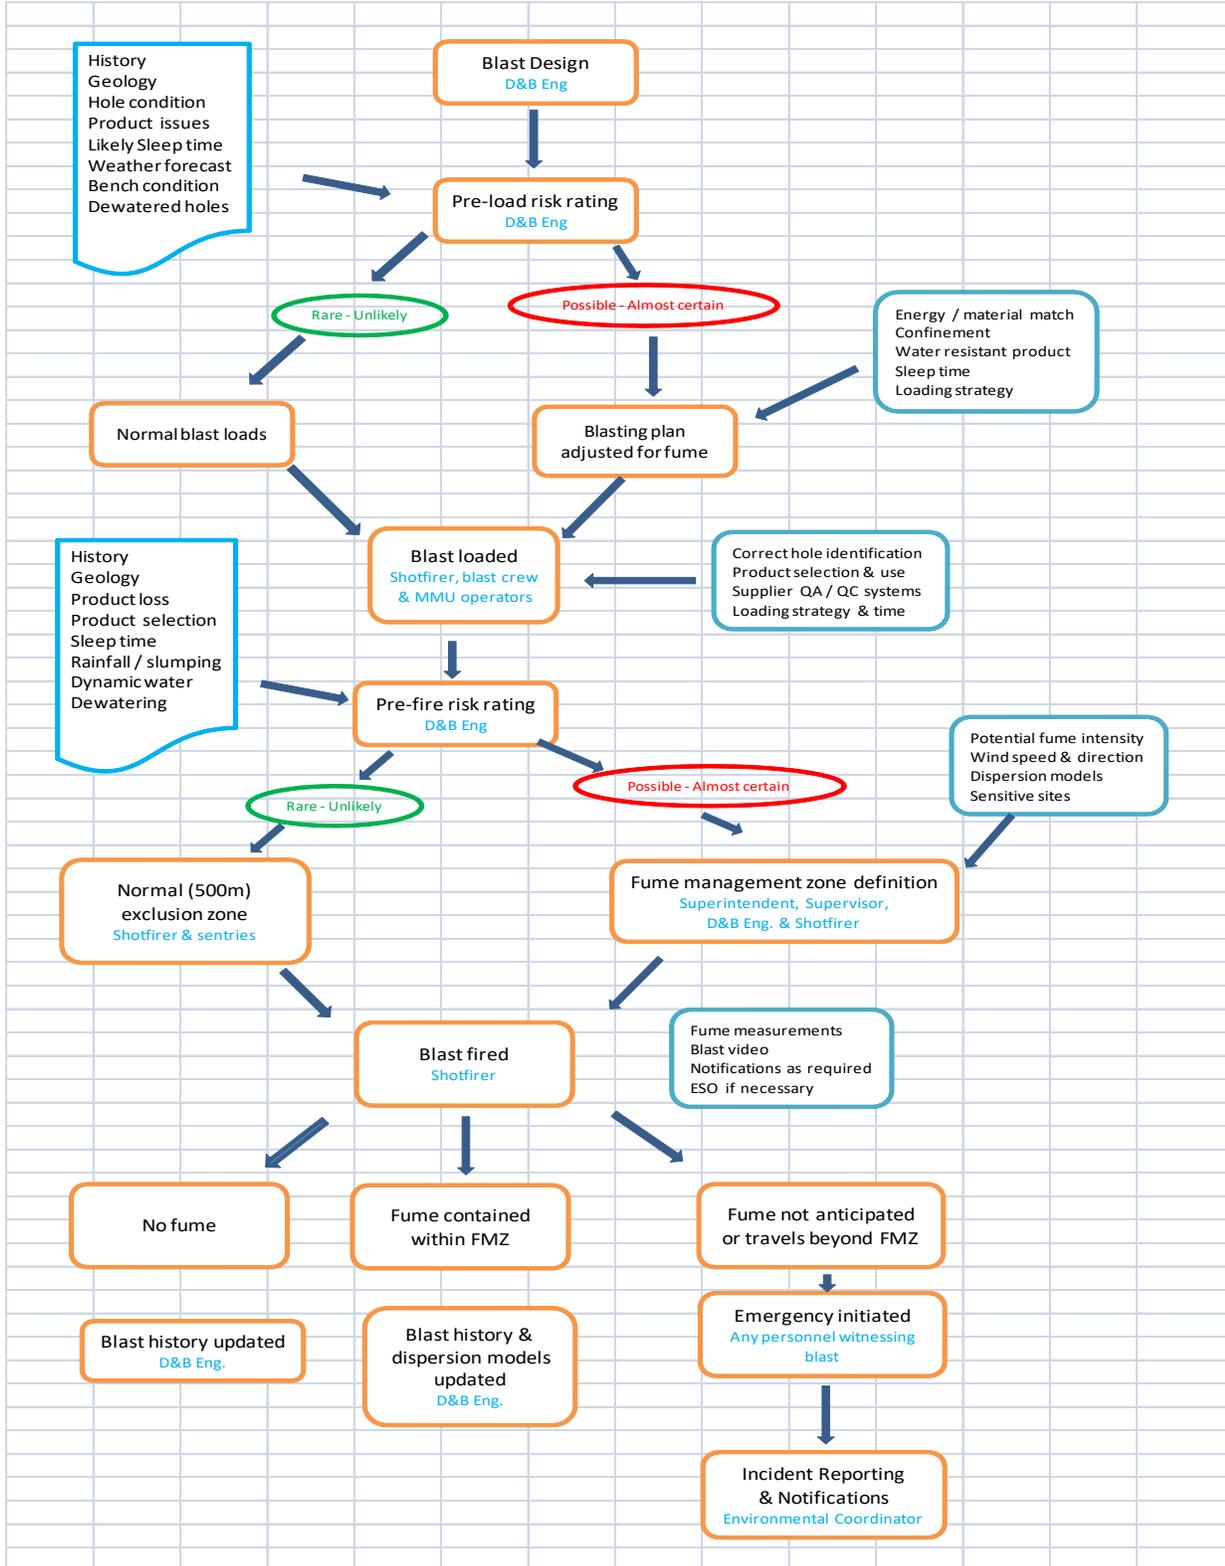

Report / Record	Responsibility	Content
Shotfiring Report	Shotfirer in charge	<ul style="list-style-type: none"> • Date/time of firing • Name, type and location of shot • Explosives type, tonnages delivered of explosives used • Number of holes charged (for day/total) • Pattern Size • Hole Diameter • Average Hole Depth • Numbers of holes fired • General comment on blast loading progress or results. • Environmental comments • Fume Category
Drill Shift Report	Drill Operator	<ul style="list-style-type: none"> • Drill Number • Location/Pattern No. • Burden & Spacing • Operator Name • Bit Size • Date/Time/Shift • Drilling task by the Hour • Hole Number • Hole Depth • Comments – including where holes are drilled off the designed location by more than 0.5m • Total Summary for shift

8. Glossary

Wet Hole – A wet hole is defined as any drill hole containing more than 1 metre of water at the bottom of the hole and/or having wet sides anywhere down the hole. Any hole that has been dewatered is classified as a wet hole.

Dry Hole – A dry hole is defined as any drill hole having less than 1 metre of static water at the bottom of the hole. Should water be detected through the dipping process, a gas bag is used to close off the bottom of the hole, prior to the loading of any explosive product.

APPENDIX 1 – GENERALISED FLOWCHART FOR FUME EVENT

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

APPENDIX 2 - VISUAL NO_x GASES RATING SCALE

The following table, together with the Field Colour Chart on the next page, details how NO_x gases from a surface blast can be assessed [Ref 6, AESIG].

Level	Typical Appearance
Level 0 No NO _x gas	
Level 1 Slight NO _x gas	
1A Localised	
1B Medium	
1C Extensive	
Level 2 Minor yellow/orange gas	
2A Localised	
2B Medium	
2C Extensive	
Level 3 Orange gas	
3A Localised	
3B Medium	
3C Extensive	
Level 4 Orange/red gas	
4A Localised	
4B Medium	
4C Extensive	
Level 5 Red/purple gas	
5A Localised	
5B Medium	
5C Extensive	

Plan

MTW Blast Fume Generation Mitigation and Management

Owner: Superintendent Drill & Blast Engineer

Document ID: MTW-10-PLAN-SITE-0013

Field Colour Chart.

Assessing the amount of NO_x produced from a blast will depend on the distance the observer is from the blast and the prevailing weather conditions. The Field Colour Chart can be used to assess the level of NO_x that is produced in a surface blast.

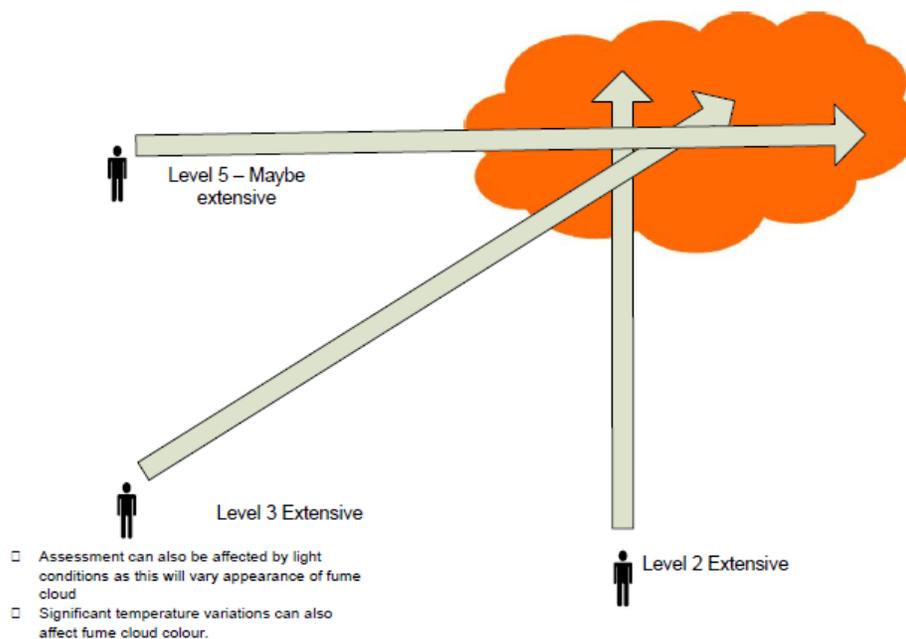

Pantone colour numbers have been included in the Field Colour Chart to ensure colours will always be produced correctly thereby ensuring a reasonable level of standardisation in reporting fume events across the mining industry.

Level	Colour	Pantone Number
Level 0 No Fume		Warm Grey 1C (RGB 244, 222, 217)
Level 1 Fume		Pantone 155C (RGB 244, 219, 170)
Level 2 Minor yellow/orange fume		Pantone 157C (RGB 237, 160, 79)
Level 3 Moderate orange fume		Pantone 158C (RGB 232, 117, 17)
Level 4 Significant orange fume		Pantone 1525C (RGB 181, 84, 0)
Level 5 Major red/purple fume		Pantone 161C (RGB 99, 58, 17)

Observation Issues

The angle of the person to the fume event will influence the assessment. Where possible and without placing persons in the path of a fume cloud there should be a number of observers to record the level. This can be moderated to give a more accurate indication of the cloud.

The issue is that the observer position and fume cloud orientation may influence the rating given.

EFFECT OF ANGLE TO FUME CLOUD AFFECTING ASSESSMENT

Plan

APPENDIX 3 – HEALTH AND SAFETY RISKS OF BLAST FUMES

NIOSH Pocket Guides

The US National Institute for Occupational Safety and Health (NIOSH) produces the *NIOSH Pocket Guide to Chemical Hazards* (NPG)... “intended as a source of general industrial hygiene information on several hundred chemicals/classes for workers, employers, and occupational health professionals. The NPG does not contain an analysis of all pertinent data, rather it presents key information and data in abbreviated or tabular form for chemicals or substance groupings (e.g. cyanides, fluorides, manganese compounds) that are found in the work environment. The information found in the NPG should help users recognize and control occupational chemical hazards.”

The NIOSH Pocket Guides for NO, NO₂ and CO are reproduced with authority of the US Centers for Disease Control and Prevention, 1600 Clifton Rd, Atlanta, GA 30333, USA.

The guides can be accessed through the NIOSH Pocket Guide to Chemical Hazards homepage: <http://www.cdc.gov/niosh/npg/default.html>

Note that the exposure limits do not necessarily match the Australian STEL and TWA.

Health and Safety Risks of Blast Fumes

Nitrogen Dioxide (NO₂)

NO₂ is a toxic gas that irritates the eyes and mucous membranes, primarily by dissolving on contact with moisture and forming a mixture of nitric and nitrous acids.

Inhalation can result in respiratory tract irritation and pulmonary oedema. Onset of pulmonary oedema can be delayed and can cause death, so personnel who have been exposed to NO₂ must be observed in hospital for at least 12 hours. Changes in pulmonary function are evident at exposures levels of 2 to 3 ppm NO₂ [Ref 9]; asthmatics are particularly sensitive, potentially suffering significant broncho-spasm at very low concentrations.

NO₂ varies in colour from light orange through to reddish-brown, depending on the concentration and the light conditions. NO₂ is visible in concentrations above 2.5 ppm [Ref 5], although from a distance (such as viewing a blast) the concentrations may need to be above 30 ppm to be observed [Ref 2].

NO₂ has a sharp, biting odour and can be detected by smell at low concentrations (< 0.5 ppm), but the sense of smell can be subdued above 4 ppm. It has a higher molar mass (46) than air (28.8) and consequently tends to travel across the ground, dispersing over distance.

The STEL for NO₂ is 5 ppm (9.4 mg/m³), TWA is 3 ppm (5.6 mg/m³), and 20 ppm is considered IDLH (immediately dangerous to life or health).

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

The US National Institute for Occupational Safety and Health (NIOSH) recommended short term exposure limit is 1 ppm

Concentration	Symptoms
~ 800 ppm	15 seconds exposure lethal by reflex choking if not rescued. Extremely irritating to the eyes, nose and throat.
~ 350 ppm	5 minutes exposure lethal by reflex choking if not rescued. Extremely irritating to the eyes, nose and throat
~ 250 ppm	Lethal to man 15 minutes by reflex choking. Airway reactivity and resistance makes breathing more difficult with time. Less than 5 minutes exposure causes potentially fatal pulmonary oedema
~ 200 ppm	Lethal to man in 30 minutes by reflex choking. Airway reactivity and resistance makes breathing difficult.
150 ppm	For 10 minutes or less causes coughing; eye, nose and throat irritation; headache; nausea and vomiting. Longer exposure can cause permanent eye damage and potentially fatal delayed pulmonary oedema
90 ppm	For 40 minutes has caused moderate irritation to the eyes and mucous membranes and potentially fatal delayed pulmonary oedema. The delay may be up to 70 hours when symptoms of cyanosis (turning blue), shortness of breath, restlessness, headache and frothy yellow or brown sputum appear. If untreated, fluids or froth can flood the lungs (i.e. drowning) or can be infected by viruses or bacteria resulting in bronchitis or pneumonia which may be fatal to a weakened patient.
50 ppm	Moderately irritating to the eyes and mucous membranes within 10 minutes and long exposure can cause permanent eye damage.
4-5 ppm:	For 15 minutes will cause increased airway reactivity (constriction of airways), airway resistance (more effort needed to breathe), and decreased diffusion of gases in the lungs
4 ppm	For 10 minutes anaesthetises the nose so it can no longer smell
0.1 ppm	For 2 hours can result in increased airway reactivity for asthmatics or people with chronic bronchitis.

Symptoms of nitrogen dioxide exposure [Ref 1]

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

Nitric Oxide (NO)

NO is a colourless gas, with a slightly irritating odour. It is slightly soluble in water and forms nitrous and nitric acid. Mild exposure can cause shortness of breath, coughing and chest pains, but more severe exposure (above 100 ppm) can lead to pulmonary oedema, cyanosis, or respiratory failure [Ref 8].

The TWA is 25 ppm (31 mg/m³), and 100 ppm is IDLH (immediately dangerous to life or health).

Concentration	Symptoms
~ 8,000 ppm (0.8%)	Sudden unconsciousness followed by death in 1 minute by chemical asphyxiation. Higher concentrations may be fatal in less time
~ 3,000 ppm (0.3%)	Dizziness or drowsiness in minutes quickly followed by unconsciousness and death in 5 Minutes
~ 1,600 ppm	Muscular tremors, loss of coordination, faster breathing, faster heart rate, drowsiness, dizziness, excess salivation and vomiting may occur in 5 minutes with unconsciousness in 10 minutes and death in 15 minutes
~ 400 ppm	First symptoms, similar to 1,600 ppm above, appear within 2 hours when Methemoglobin concentration reaches 30-40%. Vomiting may cease and unconsciousness may occur within 3 hours. Still has the potential to be fatal if Methemoglobin concentration of blood reaches 70- 90%
0.3 – 0.9 ppm	Pungent odour

Symptoms of nitric oxide exposure [Ref 1]

Carbon Monoxide (CO)

CO is a colourless, odourless and tasteless gas. It is readily absorbed through the lungs, where it displaces oxygen in blood through the formation of CO-haemoglobin, leading to headache, fatigue, dizziness, drowsiness and nausea. Large amounts of CO can lead to rapid loss of consciousness and death.

Atmospheric CO (ppm)	CO-Hb in Blood (%)	Symptoms
1950	80	Rapidly fatal.
800-1220	60-70	Unconsciousness; intermittent convulsions; respiratory failure; death if exposure is prolonged.

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

350-520	40-50	Headache; confusion; collapse; fainting upon exertion.
220	30	Decided headache; irritability; easy fatigability; disturbed judgment; possible dizziness; dimness of vision.
120	20	Shortness of breath with moderate exertion; occasional headache with throbbing in the temples.
70	10	Shortness of breath upon vigorous exertion; possible tightness across the forehead.

Symptoms of carbon monoxide exposure. The table gives the levels of COHb in the blood which tend to form at equilibrium with various concentrations of CO in the air and the clinical effects observed [Ref 10].

The TWA is 30 ppm (34 mg/m³). Short-term excursions should never exceed 400 ppm [Ref 12].

Sulphur Dioxide (SO₂)

SO₂ is a colourless gas with a characteristic pungent and irritating odour. It is a severe irritant of the eyes, mucous membranes and skin, due to the rapid formation of sulphurous acid on contact with moist membranes. High concentrations can cause respiratory paralysis or pulmonary oedema.

Concentration	Symptoms
80 – 100 ppm	May cause an increased incidence of nasopharyngitis, shortness of breath on exertion (dyspnea), and chronic fatigue
10 – 50 ppm	For 5 to 15 minutes: irritation of the eyes, nose and throat; rhinorrhea (discharge of thin nasal mucus), choking, cough, and in some instances reflex bronchoconstriction with increase pulmonary resistance.
10 ppm	Upper respiratory irritation; nose bleeds
5 ppm	Coughing after 5 minutes
3 ppm	Odour threshold
0.3 – 1 ppm	Detectable by taste

Symptoms of sulphur dioxide exposure [Ref 15]

The STEL for SO₂ is 5 ppm (13 mg/m³), TWA is 2 ppm (5.2 mg/m³), and 100 ppm is considered IDLH (immediately dangerous to life or health) [Ref 15].

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

Hydrogen Sulphide (H₂S)

H₂S is a colourless gas with a strong ‘rotten egg’ odour. It is irritating to the eyes and the respiratory tract, and may cause effects on the central nervous system. Inhalation may lead to pulmonary oedema, and as with NO₂, the effects may be delayed by several hours.

Concentration	Symptoms
400 – 700 ppm	Loss of consciousness and possible death after 30 – 60 minutes
50 – 200 ppm	Severe respiratory tract irritation; eye irritation
100 ppm	Loss of sense of smell due to olfactory fatigue
20 ppm	Neurological effects including memory loss and dizziness
5 – 10 ppm	Minor metabolic effects
2 ppm	Bronchial restriction in some asthmatics
0.008 ppm	Odour threshold

Symptoms of hydrogen sulphide exposure [Ref 16, 17]

The STEL for H₂S is 15 ppm (21 mg/m³), TWA is 10 ppm (14 mg/m³), and 100 ppm is considered IDLH (immediately dangerous to life or health).

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

APPENDIX 4 - INFORMATION FOR TREATING MEDICAL STAFF

Those exposed to NO_x gases should seek immediate medical treatment and consideration should be given to placing those exposed under observation for at least 24 hours after exposure.

To assist medical staff the following guide should be provided.

Advice to Medical Staff in the Treatment of Those Who Have Been Exposed to NO_x Gases.

The patient may have been exposed to NO_x. This is a gas usually produced on mines after the use of explosives. NO_x consists of multiple combinations of nitrogen and oxygen (N₂O, NO, NO₂, N₂O₄, N₂O₃, N₂O₅). Nitrogen dioxide (NO₂) is the principle hazardous nitrous gas. NO_x irritates the eyes and mucous membranes primarily by dissolving on contact with moisture and forming a mixture of nitric and nitrous acids. But this is not the only mechanism by which injury may occur. Inhalation results in both respiratory tract irritation and pulmonary oedema. High level exposure can cause methaemoglobinaemia. Some people, particularly asthmatics, can experience significant broncospasm at very low concentrations.

The following effects are commonly encountered after NO_x exposure:

ACUTE

- Cough
- Shortness of breath
- Irritations of the mucous membranes of the eyes, nose and throat

SHORT TERM

- Pulmonary oedema which may be delayed for up to 4-12 hours

MEDIUM TERM

- R.A.D.S. (Reactive Airways Dysfunction Syndrome)
- In rare cases bronchiolitis obliterans which may take from 2-6 weeks to appear

LONG TERM

- Chronic respiratory insufficiency

High level exposure particularly associated with methaemoglobinaemia can cause chest pain, cyanosis, and shortness of breath, tachapnea, and tachycardia. Deaths have been reported after exposure and are usually delayed. Even non irritant concentrations of NO_x may cause pulmonary oedema. Symptoms of pulmonary oedema often don't become manifest until a few hours after exposure and are aggravated by physical effort. Prior to transfer to you the patient should have been advised to rest and if any respiratory symptoms were present should have been administered oxygen.

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

The patient will need to be treated symptomatically but as a base line it is suggested that the following investigations are required:

- Spirometry
- Chest x-ray
- Methheamoglobin estimation

Because of the risk of delayed onset pulmonary edema it is recommended that as a precaution the patient be observed for up to 12 hours. As no specific antidote for NOx exists, symptoms must be treated on their merits.

Plan	
MTW Blast Fume Generation Mitigation and Management	
Owner: Superintendent Drill & Blast Engineer	Document ID: MTW-10-PLAN-SITE-0013

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

1. OVERVIEW

1.1 Objectives

The primary objective of this plan is to safely manage temporary closures of Putty Road, Wallaby Scrub Road (now partially closed), Charlton Road, Golden Highway, Gouldsville Road or combinations thereof for the purposes of blasting.

Fundamental to achieving this objective is to:

- Ensure safety and protection of potentially affected persons and property;
- Minimise road closure periods;
- Minimise inconvenience on road users, local residents and businesses;
- Notify in advance relevant stakeholders, including the public, of blasts that will temporarily close either **Putty, Charlton, Gouldsville, Wallaby Scrub Road or Golden Highway** or combinations thereof; and
- Ensure that emergency service activities are not restricted by road closure events.

This Traffic Management Plan outlines:

- NSW Department of Planning, Housing and Infrastructure (DPHI) requirements for closing a public road for blasting activities;
- Singleton Council's requirements for closing a public road for blasting activities;
- Transport for NSW (TfNSW) requirements for closing a public road for blasting activities;
- Responsibilities for road closure;
- Remedial action measures;
- Flyrock management; and
- Major hazards before controls are implemented

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

2. LEGAL AND OTHER REQUIREMENTS

The following requirements shall apply to all public road closures for the purposes of blasting at MTW.

2.1 NSW Department of Planning, Housing and Infrastructure

Consent Conditions and requirements for Road Closure Plan are detailed in:

- *Warkworth Continuation Project Development Consent (SSD-6464) November 2015 (as modified)*
- *Mount Thorley Operations 2014 Development Consent (SSD-6465) November 2015*

2.2 Council Conditions

Singleton Shire Council have prescribed their requirements for public road closures for the purpose of blasting at MTW, and are detailed in the appendices.

2.3 Road Occupancy Licences

Only Putty Road and the Golden Highway have been identified as roads requiring Road Occupancy Licences (ROLs) for public road closures for the purpose of blasting at MTW. Respective ROLs and their underlying conditions are detailed in the appendices.

2.4 Relevant Legislation & Regulation

Publication	Version	Released	Responsible Authority

2.5 Work Instructions and Plans

The following internal work instructions shall support the Traffic Management Plan:

- *MTW-09-TRAIN-MINE-0115 Explosives Operations Manual*
- *MTW-10-ENVMP-SITE-060 Blast Management Plan*

3. MANAGEMENT OF ROAD CLOSURES

3.1 Site Overview

Mount Thorley Warkworth operations is bounded by the Golden Highway to the north and east, Charlton Road to the west, with Putty Road splitting the Warkworth and Mount Thorley Operations as shown below in **Figure 1**.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

Figure 1: Aerial photo depicting the roads

Road closure approval has been limited to combinations of:

- **Putty Road** for approximately 6km from a point no less than 600m west of Charlton Road intersection to the intersection with Golden Highway;
- **Charlton Road** for approximately 7km from intersection with Putty Road and Cobcroft Road;
- **Wallaby Scrub Road** for approximately 1.4km from intersection with Golden Highway (Note: the remaining portion of former Wallaby Scrub Road was closed and then purchased by MTW in September 2018);
- **Golden Highway** for approximately 4km from Long Point Road to Warkworth Village

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

- **Golden Highway** for approximately 6km from Putty Road Intersection to Long Point Road;
- **Gouldsville Road** for approximately 1.5km from Golden Highway intersection to Long Point Road;

3.2 Requirements to Close Public Roads

Public roads will be temporarily closed whenever:

- Blasting is to be carried out within 500m of a public road; and / or
- Risk assessment has identified that portions of the road may be subject to post blast emissions, dust or other blasting risks.

3.3 Notifications

3.3.1 Singleton Argus / Newcastle Herald Newspaper

The intention to temporarily close roads for the purposes of blasting shall be advertised in the Singleton Argus or Newcastle Herald in the edition prior to the planned blasting event.

The advertisement will appear in the Public Notices section and be in the following format or similar:

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

PUBLIC NOTICE

**For updated blast times please
phone free call 1800 099 669.**

Mount Thorley Warkworth wishes to advise of the following road closures on **Thursday 13th May 2021, Friday 14th May 2021, Monday 17th May 2021, Tuesday 18th May 2021, Wednesday 19th May 2021, Thursday 20th May 2021** for the purposes of blasting. Closure will occur between 9am and 5pm depending upon weather conditions and will be for approximately 10 minutes.

Through traffic will not be possible while road closures are in place.

PUTTY ROAD will be closed between the Jerrys Plains Road and to a point 600m West of Charlton Road.

CHARLTON ROAD will be closed between Putty Road and Cobcroft Road.

JERRYS PLAINS ROAD may be closed from Putty Road to Wallaby Scrub Road.

GOULDSVILLE ROAD may be closed from Jerrys Plains Road to Long Point Road intersection.

If weather conditions are poor, blasting will be delayed until a day of suitable weather. Mount Thorley Warkworth apologises for any inconvenience caused.

3.3.2 Advanced Warning Signs

Where mandated, notice of temporary road closures will be provided via the posting of signs on the affected road(s) in the 24 hours prior to blasting. Signs will comply with *AS 1743-2018 Road Sign Specifications*.

3.3.3 Blasting Hotline

The Blasting Schedule Hotline is the primary tool by which members of the public can find information relating to MTW temporary road closures. MTW uses its best endeavours to align the road closure with the advertised time and limit the road closure duration to minimise inconvenience to road users.

The Blasting Hotline is updated on the morning of each day on which there is a scheduled road closure and can be reached on (freecall) **1800 099 669**. The hotline will advise of a one hour window for the proposed road closure (e.g. between 10am and 11am).

In the event that a road closure is to occur outside the blasting window, and once the revised time is understood, MTW will update the hotline for another one hour window, where practicable.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

3.3.4 Emergency Services Notification

Emergency services to be notified include:

Rural Fire Service hunintervalley.team@rfs.nsw.gov.au

3.3.5 Transport for NSW (TfNSW)

Where required, Road Occupancy Licences need to be activated and de-activated in accordance with TfNSW requirements. These requirements do change from time to time, however the most up to date procedures for this process can be found in the current Road Closures folder.

3.4 Traffic Control

All traffic control shall be undertaken in accordance with the current *TfNSW Traffic Control at Work Sites Technical Manual*. Traffic control devices will be set up in accordance with the approved Traffic Control Plan for each work zone, however the specific location of signage and the position of the Traffic Controller will take into consideration any external factors such as the threat of protestors or the prevailing weather conditions on a given day.

Where adjustments to approved Traffic Control Plans are required, these shall only be undertaken by suitably trained and authorised personnel in possession of current licensing. Dimension D should only be modified to accommodate prevailing environmental conditions, the preference to maintain routes of detour or alternate accesses or to isolate traffic controllers from the threat of harassment or interference. In all cases, such changes to Dimension D shall be undertaken by trained and authorised personnel.

3.5 Closing Public Roads

The duration of closure events will be minimised by delaying closures until just prior to the blast, or just prior to post blast emissions/dust arriving at the relevant road in the case of a 'Watch and Act' road closure. The Traffic Controllers will be positioned at selected points to ensure the safety of all road users. The section of the blocked road shall be large enough to contain any potential passing blast plume or flyrock.

Closures will occur at strategic locations along the road that are highly visible to oncoming traffic and will seek to minimise potential impacts on road users accessing alternate routes. Closure locations will take into consideration the accumulated traffic volume and queue lengths so as where possible, normal traffic access to side roads is not compromised.

Temporary road closures should be scheduled, where practicable, for outside peak traffic flow periods (*see 4.3.2 Peak Times to Avoid*).

3.5.1 Watch and Act Road Closure

Where pre-blast risk assessment processes identifies the potential that a road may be impacted by post blast emission or dust, a 'Watch and Act' road closure will be prepared. A Watch and Act road closure

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

involves the road closure being setup and on standby to close the road if required. If the post blast emissions and dust dissipate prior to impacting the road, the road closure will not be enacted.

3.6 Clearing Public Roads

For the purposes of this plan, road closures and requirements to clear personnel extends to all vehicular traffic, pedestrians, cyclists and people in general. This is consistent with the definition of “traffic” as per the current *TfNSW Traffic Control at Work Sites Technical Manual Issue – “all vehicles, persons or animals travelling on a road”*.

The public roads shall be cleared systematically between traffic control points by one or more personnel who are familiar with the requirements of the task.

It has been apparent that from time to time, members of the public knowingly place themselves at risk by making attempts to remain unidentified and unseen during the road clearing process, or to refuse to leave the area when asked. MTW personnel take every practicable measure to ensure the roads are clear of personnel prior to firing blasts, however at times, law enforcement may be required. Consideration to seeking assistance from Police has been identified as part of the risk management process and further details can be found in the current *TfNSW Traffic Control at Work Sites Technical Manual*.

Local police can be contacted on **02 6578 7499**

3.7 Public Safety

The duration of closure events will be minimised by delaying closures until just prior to blasts (or prior to post blast emissions/dust reaching the road in the case of a Watch and Act road closure) and by completing post-blast safety inspections immediately following blasts for blasts within 500m of the road. Although Mount Thorley Warkworth (MTW) will endeavour to minimise the duration of closures, **public safety is the primary objective** and will not be compromised by efforts to reduce closure duration.

From time to time, it may be impracticable to remove people or equipment from the road closure zone, but they may be outside the immediate danger zone of 500m of the blast itself. Approval may be sought at Superintendent level (or above) to authorise blasting to proceed in these situations, with additional controls in place to ensure the safety of the people remaining inside the zone.

Items of plant such as street sweepers, water carts etc. that may be utilised to assist with post blast clean-up may remain within the road closure zone, but cannot be within the immediate 500m danger zone until after the blast has been fired and permission has been granted by the road closure coordinator to enter the area.

Road closures are planned for less than 20 minute durations, however under certain circumstances these closures may go longer to ensure that road users are not subjected to environmental or physical hazards such as:

- *Dust;*
- *Post blast fume and gasses; and / or*
- *Flyrock or other debris on roads.*

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

3.8 Provision for Emergency Services

In the event that emergency vehicles require clear and immediate access through a closed section of public road, the Traffic Controller will immediately communicate with the Road Closure Co-ordinator to ensure a safe thoroughfare is provided for emergency services vehicles. Where possible, and with the safety of all persons being maintained, blasting will be postponed until emergency services have passed safely.

3.9 Re-opening Roads

Following blasting, the affected roads will be visually inspected to determine whether any dust, post blast emissions, fly rock, other blast debris or any other hazards are present.

To facilitate this task, the Road Closure Coordinator should maintain video footage and use a gas monitor to determine levels of post blast gasses.

For reference only, low level alarm limits for 8 hours exposure of certain gasses are as follow:

Gas detected	Low Level Alarm	High Level Alarm
NO2	3 ppm	5 ppm
NO	25 ppm	30 ppm
CO	30 ppm	200 ppm
CO2	5000 ppm	30,000 ppm

The public road shall not be reopened until gas levels and visibility have returned to a level below which they pose no risk to road users.

Where flyrock or other blast debris are present on the road, the road shall remain closed until it is cleaned to a trafficable condition or alternate traffic control is in place to control traffic flow around the hazard.

3.10 Work Zone Information

3.10.1 Cultural and Heritage Data

Aboriginal cultural heritage consists of places and items that are of significance to Aboriginal people because of their traditions, observations, lore's, customs, beliefs and history. The traditional Wonnarua people are acknowledged and access to identified areas of cultural significance is controlled by signage and locked gates.

There are no other identified items of cultural or heritage significance within the work zone.

3.10.2 Hydrological Data

There are no dams, watercourses or other water storage facilities that will impact the work zone.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

3.10.3 Meteorological Data

Meteorological data that will affect the safe completion of the works will be assessed on the day. Resources to assess meteorological data includes but is not limited to:

- **Terrock Envmet model** – local predictions of post blast emissions based on site model, predicted hourly
- **Blast Plume Risk Assessment** – to determine the likelihood of post blast emissions and their predicted path based on local environmental conditions.
- **MTW Blast Permissions** – DPHI approved blasting rules and conditions for environmentally constrained blasting.

3.10.4 Geotechnical and Geological Data

No excavation, drilling or boring will be undertaken as part of the works, and no geotechnical nor geological conditions have been identified that will have impact on the works.

4. RISK MANAGEMENT AND IMPROVEMENT

4.1 Overview

Hazard Identification and risk assessment analysis of the blasting activities has identified risk events/items that will be managed by effective traffic management planning and the implementation of this Traffic Management Plan (TMP).

All identified risks have been treated by development of this TMP. Unforeseen risks arising during the event activities will be treated in accordance with standard work practices and procedures where appropriate.

In establishing adequate controls for the hazards identified, a structured approach has been used via the hierarchy of control as outlined below:

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

Control measures must reduce the risk to 'As Low as Reasonably Practicable (ALARP)'.

Where administrative controls are relied on, they must be appropriate. Where work procedures are relied on as a control, they must be understood and followed as a result of training and enforcement.

4.2 Description of Roads

In 2014 a study of the road network surrounding MTW was undertaken for the purpose of an Environmental Impact Statement for the proposed mine continuation project. As part of that study, the traffic movements associated with Wallaby Scrub Road, Putty Road, Charlton Road and the Golden Highway in the vicinity were analysed in detail.

4.2.1 Golden Highway

A national road freight route linking the Hunter Region with the central inland regions of NSW. The route is generally two-lane two-way road with a posted speed limit of 100 km/hr. The roadway is generally constructed to a major highway design standard, with marked centre and edge lines and sealed shoulders which typically have a minimum width of 1-2m in many locations. This road is a TfNSW controlled road that requires a Road Occupancy Licence for closure.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

Golden Highway looking west

Golden Highway looking west from Putty Rd end (NOOP)

Golden Highway looking east from Long Point Rd (NOOP)

4.2.2 Putty Road

Generally an undivided 100 km/hr sealed road which runs between the townships of Singleton in the Hunter Valley to Windsor in the northern outskirts of Sydney. The Putty Road divides the Mount Thorley (MTO) and Warkworth (WML) leases and has marked centre and edge lines between the Golden Highway Intersection and the town of Bulga to the west. This road is a TfNSW controlled road that requires a Road Occupancy Licence for closure.

Putty Road looking east

Putty Road looking west

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

4.2.3 Charlton Road

A two lane rural road which links the Putty Road near Bulga with Broke Road approximately 3km north-northwest of Broke Village. This road generally has 100 km/hr speed limits and variable road pavement width and conditions, such that the edge and centre lines are not typically marked. This road is not a TfNSW controlled road.

Charlton Road looking north

4.2.4 Wallaby Scrub Road

A two lane rural road which extends 1.4km south from the intersection with the Golden Highway near Warkworth Village. This is a “No Through Road”. The road has no marked speed advisory signs heading southbound but has 80km/h speed advisory signs heading northbound approximately 700m from the Golden Highway intersection. The road has variable road pavement width and conditions, such that the edge and centre lines are not typically marked. This road is not a TfNSW controlled road. *(Note: A length The remainder of the former road, beyond 1.4km south of the Golden Highway intersection was gazetted as closed by the Minister for Land and Forestry on 7 September 2018, and the land of the former road corridor is now owned by MTW).*

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

Wallaby Scrub Road looking south

4.2.5 Gouldsville Road

A two lane rural road which links the Golden Highway with Long Point Road. This road generally has 100 km/hr speed limit and variable road pavement width and conditions, such that the edge and centre lines are not typically marked. This road is not a TfNSW controlled road.

Gouldsville Road looking north

4.3 Traffic Analysis

4.3.1 Traffic Survey

Road (both Directions)	Average Weekday Daily Traffic Movements	Morning Peak Hourly Traffic Movements		Afternoon Peak Hourly Traffic Movements	
		Time	Traffic Movements	Time	Traffic Movements
Golden Highway	3,314	6:00AM	268	4:00PM	275
Wallaby Scrub road (prior to closure)	921	6:00AM	96	3:00PM	115
Putty Road (west of	686*		69*		74*

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

MTW)					
Charlton Road	Observed traffic movements are lower than Wallaby Scrub Road*				
Gouldsville Road	Observed traffic movements are lower than Wallaby Scrub Road*				

*Note *Actual daily traffic volumes were surveyed in 2014 at 2 locations on Golden Highway and Wallaby Scrub Road (prior to the part closure of Wallaby Scrub Road). The daily traffic volume for Putty Road was determined from comparisons of the peak hourly intersection traffic volumes and is an estimate only.*

During school period between 8:15AM and 8:45AM and again at 3:45PM to 4:15PM, 3 school buses pass through the work zones.

According to the current Sydney Trains timetable, the following trains arrive and depart from Singleton train station from Monday to Friday weekly:

Scone to Newcastle	06:55			19:54	21:39
Newcastle to Scone	04:30		17:33	19:03	
Central to Armidale		12:40			
Armidale to Central		13:24			
Muswellbrook to Newcastle	10:39	15:34			
Newcastle to Muswellbrook	09:18				
Singleton to Newcastle					21:34

Consideration of traffic to meet this train schedule should be given to road closures that fall between 08:30 AM and 10:40 AM, and from 16:45 to 17:30 PM.

4.3.2 Peak times to Avoid

Peak times to be avoided for road closures in the vicinity of Mount Thorley Warkworth mine are:

Morning: 5:45AM to 10:40AM

Afternoon: 3:00PM to 5:00PM

however, it is recognised that from time to time these periods may not be avoidable due to prevailing environmental conditions.

4.3.3 Predicted Queue Lengths

Based on a median blast firing times of 12:50PM based on 2015 and 2016 records, and road closure duration of 15 minutes, typical queue lengths have been estimated for nominated road closure points on Wallaby Scrub Road, Putty Road, Charlton Road and the Golden Highway. These queue lengths assume that the road user will not choose to use the alternate routes that are available.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

Road	Direction	Queue Length	Direction	Queue Length
Golden Highway	East Bound	31	West Bound	34
Putty Road	East Bound	12	West Bound	14
Charlton Road	North Bound	<7*	South Bound	<7*
Gouldsville Road	North Bound	<7*	South Bound	<7*

*Note *Values for Charlton Road & Gouldsville Road estimated from field observation. Wallaby Scrub Road is a no through road and so is not included.*

4.4 Checklist

The attached checklist shall be completed by the Road Closure Coordinator prior to, during and after the undertaking of the works. In order to make quick and decisive improvements to the Road Closure process, this checklist may have minor variations. The most up-to-date version of the checklist can be found in the current Road Closures folder.

4.5 Incidents and Near Misses

Where incidents or near misses are to be reported, the MTW internal incident reporting system shall be used, and where required, such reports shall be forwarded to SafeWork NSW and / or NSW Police and / or other relevant regulatory authorities.

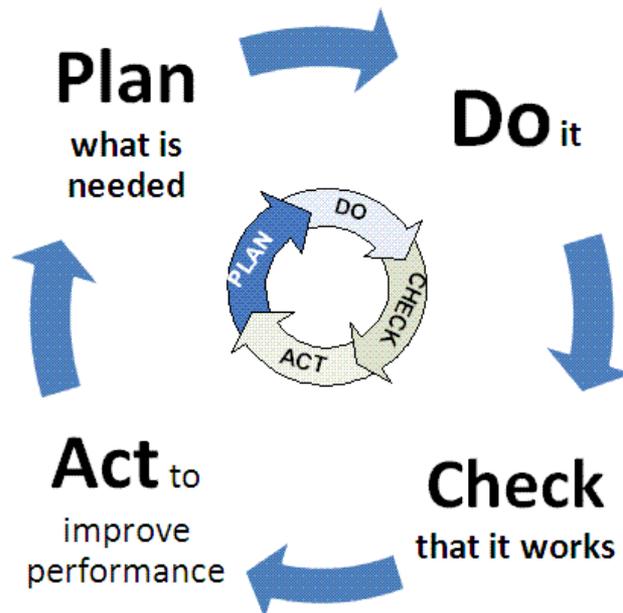

4.6 Review and Improvement

Any opportunities for improvement shall be recorded and used in the review of the Traffic Management Plan for the purpose of continuous improvement.

The continuous improvement process is designed to:

- Identify areas of opportunity for improvement of traffic management;
- Determine the cause or causes of non-conformances and deficiencies;
- Develop and implement a plan of corrective and preventative action to address any non-conformances and deficiencies;
- Verify the effectiveness of the corrective and preventative actions; and
- Document any changes in procedures resulting from process improvement.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

5 TEMPORARY TRAFFIC MANAGEMENT

5.1 Signage and Delineation

Temporary traffic management devices will be implemented in accordance with the Traffic Guidance Schemes in Appendix 1 of this document.

5.2 Speed Zoning

Speed zones WILL be altered during the project. Existing speed limit of 100/80km/h will be reduced to 60km/h during works hours only with approval of TfNSW/TMC. See Traffic Guidance Schemes in Appendix 1 for more detail.

6 ROLES AND RESPONSIBILITIES

6.1 Drill & Blast Engineer Superintendent

- Ensure that all relevant licencing, consents and legal requirements are current.
- Identify blasts that will require public road closures.
- Identify the portions of roads that are required to be closed, taking into account the location of the blast and the prevailing environmental conditions.
- Ensure correct and timely notifications are made in accordance with Singleton Shire Council conditions, the requirements of any Road Occupancy Licences and any other prescribed or relevant notifications in regards to road closures for the purposes of blasting.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

These requirements include (but are not limited to):

- *Advertising in latest edition of Singleton Argus or Newcastle Herald*
 - *Coordinating the display of advanced warning signage (Public Road signage)*
 - *Coordinating blasting times with neighbouring mines*
 - *Notification of residents who have driveways affected by road closures*
 - *Advising Emergency Services of road closures*
 - *RMS notifications and ROL activations*
 - *Advising MTW Environmental Service for update of website for road closure schedule*
 - *Ensure that the blasting hotline is updated with the most relevant blast information regarding road closures for the day*
- Ensure that the Road Closure and Traffic Management Plan undergoes regular review and checks for relevance against required legislation, standards, guidelines and for overall effectiveness to identify opportunities for improvement.

6.2 Road Closure Coordinator

- The Road Closure Coordinator is an MTW employee who is charged with the responsibility of managing the road closure operations.
- The Traffic Controllers report directly to the Road Closure Coordinator when undertaking Traffic Control duties and all communications between the traffic control operations and the Shotfirer-in-charge are channelled through the Road Closure Coordinator.
- Coordinate the Traffic Controllers to ensure that road signage and other traffic control devices are set up and in place in a timely manner to minimise delays.
- Ensure that all relevant licences are current and are carried by people undertaking traffic control duties and/or implementing Traffic Management Plans
- Ensure that any adjustments to the approved Traffic Guidance Schemes are undertaken and authorised by persons with relevant experience and training, and are authorised to do so.
- Ensure that the closed portion of the public road is systematically checked for traffic and other road users prior to initiating the blast.
- Ensure that all reasonable and practicable steps are taken to ensure that no people remain in the immediate 500m Blast Danger Zone, and that any other people, plant or vehicles that remain in the closed portion of the public road are authorised to do so at Superintendent level or above.
- Undertake post-blast inspections of the closed portions of the public road, and coordinate any remedial actions that are required to be undertaken.
- Coordinate the re-opening of the public roads in consultation with the Shotfirer-In-Charge, taking into account the location and the nature of the blast, any post blast gas or emissions, debris or flyrock on the road, or any other hazards that may pose a risk to road users.

Plan	
MTW Road Closure And Traffic Management Plan	
Owner: Mining Engineer Manager	Document ID: MTW-10-PLAN-SITE-0012

- Ensure that all relevant systems relating to the road closure are closed out, including all checklists and the recovery or placement of advanced warning signage (Public Road signage) for future blasts.
- Report any breaches or incidents relating to this plan to the Drill and Blast Officer.

6.3 Traffic Controller

- Ensure that all Traffic Control operations are undertaken in accordance to the relevant legislation, standards and guidelines that apply.
- Ensure that all road signage and other traffic control devices are in a serviceable condition and are positioned / used in accordance with the Traffic Control Plan and the *current TfNSW Traffic Control at Work Sites Technical Manual*.
- Ensure that the details of any breaches or incidents relating to this plan are reported to the Road Closure Coordinator. In the event of a breach, do not leave your post unless your personal safety or the safety of other road users is at risk.
- Undertake traffic control duties under the direction of the Road Closure Coordinator.

7. APPENDICES

- **Singleton Council Road Closure Approval**
- **Transport for NSW Road Occupancy Licences**
- **Traffic Guidance Schemes**
- **Road Closure Check List**
- **Activating ROLs Guide**
- **Traffic Control Training Overview**

**Singleton Council

Approval**

SINGLETON
COUNCIL

Enquiries: Harkamal Singh
02 6578 7290

Council Reference: 20289/2024

17/10/2024

Yancoal Mt Thorley Warkworth
PO Box 267
Singleton NSW 2330

Subject: Application for the use of a Council Road
Applicant: Yancoal Mt Thorley Warkworth
Application No: 20289/2024
Benefiting Property: Putty Road MT THORLEY 2330

Reference is made to your application received on Tuesday, 15 October 2024 for works within the road reserve of Putty Road for the sole purpose of mine blasting road closure as described in your application.

Putty Road is a classified local road and Singleton Council is the Roads Authority. Consent from Singleton Council is required within the provision of the *Roads Act 1993*.

Consent is granted in accordance with the attached terms and conditions. A copy of the attached agreement should be signed by an authorised person and returned to Council for processing.

If you require any further information or wish to discuss the details contained within the approval, please contact Harkamal Singh on the above number.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Damian Morris'.

Damian Morris
Manager Infrastructure Services

1. This Document provides consent

This document provides, and sets out the terms and conditions of, the consent (the Consent) granted by Singleton Council (Council) as the appropriate roads authority under Division 3 of Part 9 of the Roads Act 1993 (the Roads Act) in response to the application for consent filed by the applicant listed in Item 1 (the Applicant).

Consent granted is subject to the terms and conditions of the Consent, and any Annexure and Schedules to the Consent.

2. Who has consent?

The Consent is granted to the Applicant. The Consent cannot be assigned or transferred to any other person or company.

3. What does the Consent enable?

The Consent enables the Applicant to:

- a. erect the Structure in, on or over the Public Road;
- b. carry out the Works in, on or over the Public Road; and
- c. use the Structure in accordance with the Permitted Use and the terms and conditions of the Consent.

The Structure is described in Item 2.

The Benefiting Property is described in Item 3.

The Public Road is described in Item 4.

The Works are described in Item 5.

The Permitted Use is described in Item 6.

4. When will the Consent commence?

The Consent commences on the date in Item 7.

5. When will the Consent end?

The Consent will end on the date in Item 8.

If there is no date in Item 8, the Consent will end on the earlier of the following occasions:

- a. when Council decides to revoke the Consent; or
- b. when the Applicant requests that Council revoke the Consent.

6. In which circumstances can Council revoke the Consent?

Council can revoke the Consent at any time and for any reason under section 140 of the Roads Act.

If section 140 of the Roads Act is repealed, the Consent is revoked when that repeal takes effect.

Without limiting the circumstances in which Council may revoke the Consent, Council may revoke or suspend the Consent in accordance with clauses 7-10.

7. Warning Notice

If, in Council's opinion, the Applicant is not complying with any of the terms and conditions of the Consent, Council may issue a written warning notice to the Applicant (the Warning Notice).

The Applicant must reply in writing to the Warning Notice (the Applicant's Reply), and the Applicant's Reply must be received by Council within 7 days of the date of the Warning Notice.

The Applicant's Reply must contain the following information:

- a. steps the Applicant proposes to take to meet the terms and condition of the consent as outlined in the consent and specified in the Warning Notice; or
- b. the Applicants reasons for disagreement with the Waning Notice
Council will respond to the Applicant's reply within 7 days of receipt of the Applicant's Reply (Council's Response).

Once the Applicant has received Council's Response, the Applicant must ensure all requirements in Council's Response are complied with immediately.

8. Suspension and revocation - events

Council may revoke or suspend the Consent, with or without issuing a Warning Notice, if any of the following events occurs:

- a. the Applicant does not comply with the requirements of the Consent;
- b. the Applicant's application for consent contains information that is untrue, incomplete or misleading;
- c. the Applicant does not reply to a Warning Notice in the manner required by clause 7;
- d. the Applicant's Reply does not set out the steps the Applicant will take to comply with the requirements of the Warning Notice;
- e. the Applicant does not comply with the requirements of Council's Response;
- f. the Applicant prevents or hinders, or attempts to prevent or hinder, Council from carrying out any inspections in relation to the Consent;
- g. any fees associated with the Consent are not paid by the due date;
- h. any approvals required to be obtained by the Applicant in clause 15 lapse, are not granted or are revoked; or
- i. the Applicant becomes insolvent and cannot fulfil its obligations under the Consent.

9. Suspension and revocation – the Structure

Council may suspend or revoke the Consent immediately, with or without a Warning Notice, if, in Council’s opinion, the Structure:

- a. becomes unsafe; or
- b. is likely to cause environmental damage; or
- c. could harm any person or property.

10. Notice if the Consent is revoked or suspended

The Applicant may request Council to revoke the Consent, with such revocation to take effect 30 days after the date of the request.

Any request by the Applicant for Council to revoke the Consent is subject to the following conditions:

- a. the Applicant cannot request Council to revoke the Consent if the Applicant is in breach of any of the conditions of the Consent;
- b. while Council will consider any request to revoke the Consent, Council will not be bound to agree to revoke the Consent; and
- c. Council may agree to any request to revoke the Consent subject to conditions imposed by Council.

11. Notice if the Consent is revoked or suspended

If Council revokes or suspends the Consent, Council will inform the Applicant by way of written notice.

12. Effect of revocation or suspension of the Consent

If the Applicant receives a notice that Council is revoking or suspending the Consent, the Applicant must, in accordance with the notice:

In the case of suspension of the Consent:

- a. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately.

In the case of revocation of the Consent:

- b. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately in the case of revocation; and either
- c. remove the Structure immediately (where the removal of the Structure does not require the consent of any authority); or
- d. immediately apply to the relevant authority for consent to remove the Structure.

If the Applicant does not comply with the terms of the notice, and remove or cease use of the Structure (as the case may be), Council may remove the Structure.

Removal of the Structure by Council does not prevent Council from taking legal action against the Applicant, including recovering any costs incurred by Council to remove the Structure.

13. No compensation if the Consent is revoked or suspended

Nothing in the Consent renders Council liable to pay any compensation to the Applicant in circumstances where Council suspends or revokes the Consent.

14. Statutory restrictions

The Consent is limited in its operation by the provisions of the Roads Act and any Regulations made under the Roads Act, and is granted subject to the provisions of the Roads Act.

15. Prior to carrying out the Works

The Applicant must, prior to carrying out the Works, obtain any necessary approvals from Council for the Works, the Structure and the Permitted Use under the Environmental Planning and Assessment Act 1979 and the Local Government Act 1993;

The Applicant must comply with all conditions imposed by any approvals of Council, the RMS, the Minister administering the Roads Act or any other authority.

The Applicant is required to give at least 7 days notice to the occupiers of properties adjoining any part of the Public Road in which the Works are to be carried out, of the intention to carry out those Works.

The Applicant must give at least 48 hours written notice to Council's Representative listed at Item 9 at the address listed at Item 10 prior to commencing the Works.

The Applicant is required to deliver to Council's Representative the insurance policy referred to in clause 21 and the bank guarantee referred to in clause 22 prior to commencing the Works, as well as copies of any approvals that the Applicant is required to obtain in respect of the Works, the Structure or the Permitted Use.

16. Condition of Site

Council gives no warranty (either present or future) as to the suitability of the Public Road or the use to which the Public Road may be put. The Applicant is deemed to have sought the Consent with full knowledge of and subject to any prohibitions or restrictions on the use of the Public Road from time to time under or in pursuance of any law.

17. Carrying out the Works

The Applicant must carry out the Works:

- a. in conformity with the description of the Works at Item 5;
- b. in accordance with the approvals listed in clause 15;
- c. to the reasonable satisfaction of Council's Representative;
- d. as expeditiously as practicable in a proper and workmanlike manner;
- e. proceed continuously with the Works until completion of the Works;
- f. with due regard to the safety and rights of the public and for that purpose comply with the requirements of:
 - 1. Council's Representative;
 - 2. the WorkCover Authority of New South Wales;
 - 3. the Department of Industrial Relations and Employment;
 - 4. the Police Service of New South Wales; and
 - 5. any other authority;
- g. in a manner that does not unreasonably interfere with the use of the Public Road or any other land by other persons while carrying out the Works;
- h. in a manner that complies with Council's policies and procedures; and
- i. between the hours of 7.00am and 6.00pm on Mondays to Fridays, between 8.00am and 4.00pm on Saturdays and at other times only if previously approved by Council's Representative in writing.

18. Amendments to the Works

If, in Council's opinion, it becomes necessary:

- a. to relocate or remove any portion of the Structure due to:
 - 1. any work in, on or over the Public Road; or
 - 2. widening or reconstruction of the Public Road which Council or any other authority wishes to carry out; or
- b. to carry out additional works to the Public Road or the Structure for the safety and protection of the public, the Applicant must, at its own cost:
- c. relocate, carry out the removal or carry out any additional work; and
- d. pay to Council any additional cost or expenditure incurred by Council by reason of the existence, relocation or removal of the Structure.

If no representative of the Applicant is present at the Works site, or if Council's Representative determines an event of emergency has occurred, Council's Representative can take any action to prevent loss of or damage to the whole or any part of the Structure, the Public Road or property adjacent to the Structure, or to prevent personal injury to any person.

In such circumstances, where Council's Representative reasonably determines that the Applicant would have been liable to take such action, the cost of Council's action must be paid by the Applicant to Council as a debt due to Council. Any such action taken by Council's Representative will not relieve the Applicant of any liability or obligation under the Consent.

19. Council's inspection

Council reserves the right to inspect the Public Road, the Structure and the Works at any time with reasonable notice and at any time in an emergency.

20. Charges

The Applicant is required to pay to Council an annual charge for the Consent in accordance with section 611 of the Local Government Act 1993 which is set out at Item 11 (the Annual Charge).

The Annual Charge must be paid prior to use of the Structure being commenced. The Annual Charge is to be paid in the manner advised by Council's Representative, as amended from time to time.

Council may amend the amount of the Annual Charge at any time.

21. Insurance and Indemnities

The Applicant indemnifies Council and keeps Council indemnified from and against all actions, claims and demands if any arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent or any damage to the Applicant's property in accordance with the Consent.

Council can pay, satisfy, defend, compromise or settle any claim arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent and any amount paid by Council in doing so is a debt due to Council by the Applicant and must be repaid on demand.

The Applicant indemnifies Council against any liability to pay taxes or charges payable now or in the future in respect of the Works, the Structure or the Consent.

The Applicant must obtain and keep current an insurance policy:

- a. noting Council's interest as the appropriate roads authority of the Public Road and listing Council as co-insured; and
- b. covering liability to the public for not less than the amount in Item 12 for each accident or event.

The insurance policy of the Applicant must be produced to Council's Representative prior to commencing the Works along with the receipt for the last premium. The Applicant must provide certificates of currency to Council on an annual basis while the Consent remains in force.

The Applicant must not void, reduce or cancel any insurance policy in respect of the Public Road, the Structure or the Works.

22. Bank Guarantee

Before commencing the Works, the Applicant must deliver to Council's Representative a bank guarantee to secure the satisfaction of the Applicant's obligations under the Consent (the Bank Guarantee).

The Bank Guarantee must:

- a. be in a form acceptable to Council and for an amount not less than the amount specified in Item 13; and
- b. be payable to Council at any time while the Consent is in force.

If the Applicant fails to satisfy any of its obligations under the Consent, or if Council incurs any expense under any term of the Consent, Council may call on the Bank Guarantee and remedy the Applicant's failure or reimburse Council for that expense without prejudice to any other right Council may have against the Applicant.

Council will return the Bank Guarantee, or any remainder, to the Applicant when the Applicant's obligations under the Consent have been complied with to the reasonable satisfaction of Council's Representative.

23. End of the Consent

When the Consent ends or is revoked, any part of the Structure remaining within the Public Road will be deemed to be an obstruction or encroachment under section 107 of the Roads Act.

The Applicant or any other person using or capable of using the Structure after the Consent ends will be deemed to be a person who causes an obstruction or encroachment on a public road for the purposes of section 107(1)(a) of the Roads Act.

When the Consent ends the Applicant must, in any manner directed by Council and as quickly as practicable, remove the Structure and make good any damage caused by the removal. The Applicant must also pay any outstanding fees and charges due to Council under the Consent.

If the Applicant does not remove the Structure or make good any damage caused by the removal at the expiration of the Consent, Council may undertake such actions on behalf of the Applicant and the costs incurred by Council in doing so will be a debt due from the Applicant to Council, payable on demand.

24. Resolution of disputes

Council will endeavour to resolve any disputes with the Applicant by discussing them with the Applicant. However, in the absence of agreement, Council's decision will be final. Nothing in this clause precludes the Applicant from taking legal action against Council in respect of Council's decision.

25. Notices

Any notice given under or in accordance with the Consent can be given in the manner provided in sections 254 and 255 of the Roads Act.

26. Livestock

- a. Cattle must be fenced at all times behind an electric fence with pigtail pickets rather than star pickets.
- b. Cattle must be taken off the road at night.
- c. No entire male cattle (bulls) are allowed on roadsides.
- d. No horses are allowed to feed on roadsides

27. General

Nothing contained in the Consent:

- a. prejudices or affects the rights of the public to pass along the Public Road;
- b. authorises any nuisance or permanent obstruction of the Public Road;
- c. confers on the Applicant any exclusive right or title to that part of the Structure within the boundaries of the Public Road; or
- d. in any way restricts or limits the powers of Council in respect of the Public Road.

A certificate signed by Council's Representative as to the cost of any work carried out by Council or on Council's behalf will be final and conclusive evidence of that cost.

The Applicant must pay all reasonable legal costs incurred by Council in connection with the preparation of the Consent and with remedying any breach of the requirements of the Consent.

The Applicant must comply with all laws relating to the Works, the Structure and the Public Road.

Commencement of the Works constitutes acceptance of all conditions of the Consent.

A waiver or indulgence granted by Council in respect of any non-compliance by the Applicant with the terms of the Consent does not constitute a future or past waiver of similar non-compliance. A failure to act by Council in response to any non-compliance does not constitute a waiver of such conduct.

A reference to an Item is attached in Schedule 1.

APPENDIX 1

1. The Applicant shall be responsible for investigating and locating the position and depth of any public utility service in particular Telstra cables, gas, electricity, water, sewer and stormwater and other private services such as irrigation pump lines before any works commence on site and ensure that no damage or conflict shall result.
2. No work shall be carried out during periods of adverse weather conditions or any other prevailing circumstances that make the work or traffic control hazardous.
3. Council shall be reimbursed by the Applicant when requested, for any expenses incurred in restoring the road pavement, or other sections of the site, within the road reservation.
4. The site shall be left in a safe condition cleared of debris when the works are completed.
5. The agreement cannot be assigned or transferred to another person. Council reserves the right to revoke this consent at any time.
6. This approval does not extend to the use of any other machinery or works within the road reserve.
7. Council is indemnified against any claims that may arise in regard to the works you will be undertaking.
8. Any Construction works are to be completed in accordance with Singleton Council's Development Construction Specification CQC Rev 3 – Quality Control Requirements available on Council's website www.singleton.nsw.gov.au
9. Road Occupancy License (ROL) and concurrence from Transport for NSW (TfNSW) are required before performing the stop/slow or closing the state road for blasting purpose as mentioned in S138 application; Provided ROL will expire on 28/12/2024 and must be renewed before the expiry date; ROL must be valid until the expiry date of current S138 permit.
10. Traffic control is to be set out as per the plans supplied to council and installed by an appropriately qualified person.
11. Traffic stoppage to be limited to a maximum of 15 minutes.

12. New policy documentation must be provided to Singleton Council before the above expiry of the Certificate of Currency which is 30/11/2024.
13. The authority shall only extend to the temporary closure for a maximum of four (4) blasting events per week in the period of Monday to Saturday 9.00am to 5:00pm, subject to notice being given to Singleton Council on each occasion, in the approved format.
14. Notification is provided to Singleton Council by email, for any blast after 7:00am, by 12 noon on the previous working day.
15. The temporary road closure in the local newspaper 'Singleton Argus' in the paper issue prior to blasting by the applicant.
16. Prior to re-opening the road, Yancoal Mt Thorley Warkworth shall inspect and repair any damage thereto and shall not re-open the road until such time as the road has been restored to a safe and trafficable condition.
17. The time of closures not to coincide with changes of shift workers from other mines. Blasting times should be co-ordinated such that they are either a maximum of 5 minutes or a minimum of 45 minutes apart. Further each closure is limited to a maximum of 15 minutes. The road shall be closed for periods no longer than is necessary for the purpose.
18. Any sign must be maintained while the work is being carried out and must be removed when the work has been completed
19. Prior to completion of the work, restore any damage, reinstate any disturbed areas, and clean up the site to match conditions of the site prior to commencement, leave the site clean and tidy, and free of any rubbish and debris.
20. Please advise Councils Customer Service on 02 6578 7290 or email council@singleton.nsw.gov.au once works have been completed.

Council Reference: 20284/2024

17/10/2024

Yancoal Mt Thorley Warkworth
PO Box 267
Singleton NSW 2330

Subject: Application for the use of a Council Road
Applicant: Yancoal Mt Thorley Warkworth
Application No: 20284/2024
Benefiting Property: Charlton Road BROKE 2330

Reference is made to your application received on Tuesday, 15 October 2024 for works within the road reserve of Charlton Road for the sole purpose of mine blasting road closure as described in your application.

Charlton Road is a classified local road and Singleton Council is the Roads Authority. Consent from Singleton Council is required within the provision of the *Roads Act 1993*.

Consent is granted in accordance with the attached terms and conditions. A copy of the attached agreement should be signed by an authorised person and returned to Council for processing.

If you require any further information or wish to discuss the details contained within the approval, please contact Harkamal Singh on the above number.

Yours faithfully

Damian Morris
Manager Infrastructure Services

1. This Document provides consent

This document provides, and sets out the terms and conditions of, the consent (the Consent) granted by Singleton Council (Council) as the appropriate roads authority under Division 3 of Part 9 of the Roads Act 1993 (the Roads Act) in response to the application for consent filed by the applicant listed in Item 1 (the Applicant).

Consent granted is subject to the terms and conditions of the Consent, and any Annexure and Schedules to the Consent.

2. Who has consent?

The Consent is granted to the Applicant. The Consent cannot be assigned or transferred to any other person or company.

3. What does the Consent enable?

The Consent enables the Applicant to:

- a. erect the Structure in, on or over the Public Road;
- b. carry out the Works in, on or over the Public Road; and
- c. use the Structure in accordance with the Permitted Use and the terms and conditions of the Consent.

The Structure is described in Item 2.

The Benefiting Property is described in Item 3.

The Public Road is described in Item 4.

The Works are described in Item 5.

The Permitted Use is described in Item 6.

4. When will the Consent commence?

The Consent commences on the date in Item 7.

5. When will the Consent end?

The Consent will end on the date in Item 8.

If there is no date in Item 8, the Consent will end on the earlier of the following occasions:

- a. when Council decides to revoke the Consent; or
- b. when the Applicant requests that Council revoke the Consent.

6. In which circumstances can Council revoke the Consent?

Council can revoke the Consent at any time and for any reason under section 140 of the Roads Act.

If section 140 of the Roads Act is repealed, the Consent is revoked when that repeal takes effect.

Without limiting the circumstances in which Council may revoke the Consent, Council may revoke or suspend the Consent in accordance with clauses 7-10.

7. Warning Notice

If, in Council's opinion, the Applicant is not complying with any of the terms and conditions of the Consent, Council may issue a written warning notice to the Applicant (the Warning Notice).

The Applicant must reply in writing to the Warning Notice (the Applicant's Reply), and the Applicant's Reply must be received by Council within 7 days of the date of the Warning Notice.

The Applicant's Reply must contain the following information:

- a. steps the Applicant proposes to take to meet the terms and condition of the consent as outlined in the consent and specified in the Warning Notice; or
- b. the Applicants reasons for disagreement with the Waning Notice
Council will respond to the Applicant's reply within 7 days of receipt of the Applicant's Reply (Council's Response).

Once the Applicant has received Council's Response, the Applicant must ensure all requirements in Council's Response are complied with immediately.

8. Suspension and revocation - events

Council may revoke or suspend the Consent, with or without issuing a Warning Notice, if any of the following events occurs:

- a. the Applicant does not comply with the requirements of the Consent;
- b. the Applicant's application for consent contains information that is untrue, incomplete or misleading;
- c. the Applicant does not reply to a Warning Notice in the manner required by clause 7;
- d. the Applicant's Reply does not set out the steps the Applicant will take to comply with the requirements of the Warning Notice;
- e. the Applicant does not comply with the requirements of Council's Response;
- f. the Applicant prevents or hinders, or attempts to prevent or hinder, Council from carrying out any inspections in relation to the Consent;
- g. any fees associated with the Consent are not paid by the due date;
- h. any approvals required to be obtained by the Applicant in clause 15 lapse, are not granted or are revoked; or
- i. the Applicant becomes insolvent and cannot fulfil its obligations under the Consent.

9. Suspension and revocation – the Structure

Council may suspend or revoke the Consent immediately, with or without a Warning Notice, if, in Council's opinion, the Structure:

- a. becomes unsafe; or
- b. is likely to cause environmental damage; or
- c. could harm any person or property.

10. Notice if the Consent is revoked or suspended

The Applicant may request Council to revoke the Consent, with such revocation to take effect 30 days after the date of the request.

Any request by the Applicant for Council to revoke the Consent is subject to the following conditions:

- a. the Applicant cannot request Council to revoke the Consent if the Applicant is in breach of any of the conditions of the Consent;
- b. while Council will consider any request to revoke the Consent, Council will not be bound to agree to revoke the Consent; and
- c. Council may agree to any request to revoke the Consent subject to conditions imposed by Council.

11. Notice if the Consent is revoked or suspended

If Council revokes or suspends the Consent, Council will inform the Applicant by way of written notice.

12. Effect of revocation or suspension of the Consent

If the Applicant receives a notice that Council is revoking or suspending the Consent, the Applicant must, in accordance with the notice:

In the case of suspension of the Consent:

- a. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately.

In the case of revocation of the Consent:

- b. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately in the case of revocation; and either
- c. remove the Structure immediately (where the removal of the Structure does not require the consent of any authority); or
- d. immediately apply to the relevant authority for consent to remove the Structure.

If the Applicant does not comply with the terms of the notice, and remove or cease use of the Structure (as the case may be), Council may remove the Structure.

Removal of the Structure by Council does not prevent Council from taking legal action against the Applicant, including recovering any costs incurred by Council to remove the Structure.

13. No compensation if the Consent is revoked or suspended

Nothing in the Consent renders Council liable to pay any compensation to the Applicant in circumstances where Council suspends or revokes the Consent.

14. Statutory restrictions

The Consent is limited in its operation by the provisions of the Roads Act and any Regulations made under the Roads Act, and is granted subject to the provisions of the Roads Act.

15. Prior to carrying out the Works

The Applicant must, prior to carrying out the Works, obtain any necessary approvals from Council for the Works, the Structure and the Permitted Use under the Environmental Planning and Assessment Act 1979 and the Local Government Act 1993;

The Applicant must comply with all conditions imposed by any approvals of Council, the RMS, the Minister administering the Roads Act or any other authority.

The Applicant is required to give at least 7 days notice to the occupiers of properties adjoining any part of the Public Road in which the Works are to be carried out, of the intention to carry out those Works.

The Applicant must give at least 48 hours written notice to Council's Representative listed at Item 9 at the address listed at Item 10 prior to commencing the Works.

The Applicant is required to deliver to Council's Representative the insurance policy referred to in clause 21 and the bank guarantee referred to in clause 22 prior to commencing the Works, as well as copies of any approvals that the Applicant is required to obtain in respect of the Works, the Structure or the Permitted Use.

16. Condition of Site

Council gives no warranty (either present or future) as to the suitability of the Public Road or the use to which the Public Road may be put. The Applicant is deemed to have sought the Consent with full knowledge of and subject to any prohibitions or restrictions on the use of the Public Road from time to time under or in pursuance of any law.

17. Carrying out the Works

The Applicant must carry out the Works:

- a. in conformity with the description of the Works at Item 5;
- b. in accordance with the approvals listed in clause 15;
- c. to the reasonable satisfaction of Council's Representative;
- d. as expeditiously as practicable in a proper and workmanlike manner;
- e. proceed continuously with the Works until completion of the Works;
- f. with due regard to the safety and rights of the public and for that purpose comply with the requirements of:
 1. Council's Representative;
 2. the WorkCover Authority of New South Wales;
 3. the Department of Industrial Relations and Employment;
 4. the Police Service of New South Wales; and
 5. any other authority;
- g. in a manner that does not unreasonably interfere with the use of the Public Road or any other land by other persons while carrying out the Works;
- h. in a manner that complies with Council's policies and procedures; and
- i. between the hours of 7.00am and 6.00pm on Mondays to Fridays, between 8.00am and 4.00pm on Saturdays and at other times only if previously approved by Council's Representative in writing.

18. Amendments to the Works

If, in Council's opinion, it becomes necessary:

- a. to relocate or remove any portion of the Structure due to:
 1. any work in, on or over the Public Road; or
 2. widening or reconstruction of the Public Road which Council or any other authority wishes to carry out; or
- b. to carry out additional works to the Public Road or the Structure for the safety and protection of the public, the Applicant must, at its own cost:
- c. relocate, carry out the removal or carry out any additional work; and
- d. pay to Council any additional cost or expenditure incurred by Council by reason of the existence, relocation or removal of the Structure.

If no representative of the Applicant is present at the Works site, or if Council's Representative determines an event of emergency has occurred, Council's Representative can take any action to prevent loss of or damage to the whole or any part of the Structure, the Public Road or property adjacent to the Structure, or to prevent personal injury to any person.

In such circumstances, where Council's Representative reasonably determines that the Applicant would have been liable to take such action, the cost of Council's action must be paid by the Applicant to Council as a debt due to Council. Any such action

taken by Council's Representative will not relieve the Applicant of any liability or obligation under the Consent.

19. Council's inspection

Council reserves the right to inspect the Public Road, the Structure and the Works at any time with reasonable notice and at any time in an emergency.

20. Charges

The Applicant is required to pay to Council an annual charge for the Consent in accordance with section 611 of the Local Government Act 1993 which is set out at Item 11 (the Annual Charge).

The Annual Charge must be paid prior to use of the Structure being commenced. The Annual Charge is to be paid in the manner advised by Council's Representative, as amended from time to time.

Council may amend the amount of the Annual Charge at any time.

21. Insurance and Indemnities

The Applicant indemnifies Council and keeps Council indemnified from and against all actions, claims and demands if any arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent or any damage to the Applicant's property in accordance with the Consent.

Council can pay, satisfy, defend, compromise or settle any claim arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent and any amount paid by Council in doing so is a debt due to Council by the Applicant and must be repaid on demand.

The Applicant indemnifies Council against any liability to pay taxes or charges payable now or in the future in respect of the Works, the Structure or the Consent.

The Applicant must obtain and keep current an insurance policy:

- a. noting Council's interest as the appropriate roads authority of the Public Road and listing Council as co-insured; and
- b. covering liability to the public for not less than the amount in Item 12 for each accident or event.

The insurance policy of the Applicant must be produced to Council's Representative prior to commencing the Works along with the receipt for the last premium. The Applicant must provide certificates of currency to Council on an annual basis while the Consent remains in force.

The Applicant must not void, reduce or cancel any insurance policy in respect of the Public Road, the Structure or the Works.

22. Bank Guarantee

Before commencing the Works, the Applicant must deliver to Council's Representative a bank guarantee to secure the satisfaction of the Applicant's obligations under the Consent (the Bank Guarantee).

The Bank Guarantee must:

- a. be in a form acceptable to Council and for an amount not less than the amount specified in Item 13; and
- b. be payable to Council at any time while the Consent is in force.

If the Applicant fails to satisfy any of its obligations under the Consent, or if Council incurs any expense under any term of the Consent, Council may call on the Bank Guarantee and remedy the Applicant's failure or reimburse Council for that expense without prejudice to any other right Council may have against the Applicant.

Council will return the Bank Guarantee, or any remainder, to the Applicant when the Applicant's obligations under the Consent have been complied with to the reasonable satisfaction of Council's Representative.

23. End of the Consent

When the Consent ends or is revoked, any part of the Structure remaining within the Public Road will be deemed to be an obstruction or encroachment under section 107 of the Roads Act.

The Applicant or any other person using or capable of using the Structure after the Consent ends will be deemed to be a person who causes an obstruction or encroachment on a public road for the purposes of section 107(1)(a) of the Roads Act.

When the Consent ends the Applicant must, in any manner directed by Council and as quickly as practicable, remove the Structure and make good any damage caused by the removal. The Applicant must also pay any outstanding fees and charges due to Council under the Consent.

If the Applicant does not remove the Structure or make good any damage caused by the removal at the expiration of the Consent, Council may undertake such actions on behalf of the Applicant and the costs incurred by Council in doing so will be a debt due from the Applicant to Council, payable on demand.

24. Resolution of disputes

Council will endeavour to resolve any disputes with the Applicant by discussing them with the Applicant. However, in the absence of agreement, Council's decision will be final. Nothing in this clause precludes the Applicant from taking legal action against Council in respect of Council's decision.

25. Notices

Any notice given under or in accordance with the Consent can be given in the manner provided in sections 254 and 255 of the Roads Act.

26. Livestock

- a. Cattle must be fenced at all times behind an electric fence with pigtail pickets rather than star pickets.
- b. Cattle must be taken off the road at night.
- c. No entire male cattle (bulls) are allowed on roadsides.
- d. No horses are allowed to feed on roadsides

27. General

Nothing contained in the Consent:

- a. prejudices or affects the rights of the public to pass along the Public Road;
- b. authorises any nuisance or permanent obstruction of the Public Road;
- c. confers on the Applicant any exclusive right or title to that part of the Structure within the boundaries of the Public Road; or
- d. in any way restricts or limits the powers of Council in respect of the Public Road.

A certificate signed by Council's Representative as to the cost of any work carried out by Council or on Council's behalf will be final and conclusive evidence of that cost.

The Applicant must pay all reasonable legal costs incurred by Council in connection with the preparation of the Consent and with remedying any breach of the requirements of the Consent.

The Applicant must comply with all laws relating to the Works, the Structure and the Public Road.

Commencement of the Works constitutes acceptance of all conditions of the Consent.

A waiver or indulgence granted by Council in respect of any non-compliance by the Applicant with the terms of the Consent does not constitute a future or past waiver of similar non-compliance. A failure to act by Council in response to any non-compliance does not constitute a waiver of such conduct.

A reference to an Item is attached in Schedule 1.

Public Risk Insurance Policy to cover the Council. Policy cover of at least \$20,000,000 evidence of such policy is to be provided to Council prior to commencement.

Insurance Underwriter: AON,
Policy Number: SGCGL00025423,
Insurance Policy Expiry Date: 24/11/2024.

Item 13 – Bond/Bank Guarantee

N/A

APPENDIX 1

1. The Applicant shall be responsible for investigating and locating the position and depth of any public utility service in particular Telstra cables, gas, electricity, water, sewer and stormwater and other private services such as irrigation pump lines before any works commence on site and ensure that no damage or conflict shall result.
2. No work shall be carried out during periods of adverse weather conditions or any other prevailing circumstances that make the work or traffic control hazardous.
3. Council shall be reimbursed by the Applicant when requested, for any expenses incurred in restoring the road pavement, or other sections of the site, within the road reservation.
4. The site shall be left in a safe condition cleared of debris when the works are completed.
5. The agreement cannot be assigned or transferred to another person. Council reserves the right to revoke this consent at any time.
6. This approval does not extend to the use of any other machinery or works within the road reserve.
7. Council is indemnified against any claims that may arise in regard to the works you will be undertaking.
8. Any Construction works are to be completed in accordance with Singleton Council's Development Construction Specification CQC Rev 3 – Quality Control Requirements available on Council's website www.singleton.nsw.gov.au
9. Traffic control is to be set out as per the plans supplied to council and installed by an appropriately qualified person.
10. Traffic stoppage to be limited to a maximum of 15 minutes.
11. New policy documentation must be provided to Singleton Council before the above expiry of the Certificate of Currency which is 24/11/2024.
12. The authority shall only extend to the temporary closure for a maximum of four (4) blasting events per week in the period of Monday to Saturday 9.00am to 5:00pm,

subject to notice being given to Singleton Council on each occasion, in the approved format.

13. Notification is provided to Singleton Council by email, for any blast after 7:00am, by 12 noon on the previous working day.
14. The temporary road closure in the local newspaper 'Singleton Argus' in the paper issue prior to blasting by the applicant.
15. Prior to re-opening the road, Yancoal Mt Thorley Warkworth shall inspect and repair any damage thereto and shall not re-open the road until such time as the road has been restored to a safe and trafficable condition.
16. The time of closures not to coincide with changes of shift workers from other mines. Blasting times should be co-ordinated such that they are either a maximum of 5 minutes or a minimum of 45 minutes apart. Further each closure is limited to a maximum of 15 minutes. The road shall be closed for periods no longer than is necessary for the purpose.
17. Any sign must be maintained while the work is being carried out and must be removed when the work has been completed
18. Prior to completion of the work, restore any damage, reinstate any disturbed areas, and clean up the site to match conditions of the site prior to commencement, leave the site clean and tidy, and free of any rubbish and debris.
19. Please advise Councils Customer Service on 02 6578 7290 or email council@singleton.nsw.gov.au once works have been completed.

Subject: Application for the use of a Council Road
Applicant: Yancoal Mt Thorley Warkworth
Application No: 20290/2024
Benefiting Property: Wallaby Scrub Road WARKWORTH 2330

Reference is made to your application received on Tuesday, 15 October 2024 for works within the road reserve of Wallaby Scrub Road for the sole purpose of mine blasting road closure as described in your application.

Wallaby Scrub Road is a classified local road and Singleton Council is the Roads Authority. Consent from Singleton Council is required within the provision of the *Roads Act 1993*.

Consent is granted in accordance with the attached terms and conditions. A copy of the attached agreement should be signed by an authorised person and returned to Council for processing.

If you require any further information or wish to discuss the details contained within the approval, please contact Harkamal Singh on the above number.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Damian Morris'.

Damian Morris
Manager Infrastructure Services

1. This Document provides consent

This document provides, and sets out the terms and conditions of, the consent (the Consent) granted by Singleton Council (Council) as the appropriate roads authority under Division 3 of Part 9 of the Roads Act 1993 (the Roads Act) in response to the application for consent filed by the applicant listed in Item 1 (the Applicant).

Consent granted is subject to the terms and conditions of the Consent, and any Annexure and Schedules to the Consent.

2. Who has consent?

The Consent is granted to the Applicant. The Consent cannot be assigned or transferred to any other person or company.

3. What does the Consent enable?

The Consent enables the Applicant to:

- a. erect the Structure in, on or over the Public Road;
- b. carry out the Works in, on or over the Public Road; and
- c. use the Structure in accordance with the Permitted Use and the terms and conditions of the Consent.

The Structure is described in Item 2.

The Benefiting Property is described in Item 3.

The Public Road is described in Item 4.

The Works are described in Item 5.

The Permitted Use is described in Item 6.

4. When will the Consent commence?

The Consent commences on the date in Item 7.

5. When will the Consent end?

The Consent will end on the date in Item 8.

If there is no date in Item 8, the Consent will end on the earlier of the following occasions:

- a. when Council decides to revoke the Consent; or
- b. when the Applicant requests that Council revoke the Consent.

6. In which circumstances can Council revoke the Consent?

Council can revoke the Consent at any time and for any reason under section 140 of the Roads Act.

If section 140 of the Roads Act is repealed, the Consent is revoked when that repeal takes effect.

Without limiting the circumstances in which Council may revoke the Consent, Council may revoke or suspend the Consent in accordance with clauses 7-10.

7. Warning Notice

If, in Council's opinion, the Applicant is not complying with any of the terms and conditions of the Consent, Council may issue a written warning notice to the Applicant (the Warning Notice).

The Applicant must reply in writing to the Warning Notice (the Applicant's Reply), and the Applicant's Reply must be received by Council within 7 days of the date of the Warning Notice.

The Applicant's Reply must contain the following information:

- a. steps the Applicant proposes to take to meet the terms and condition of the consent as outlined in the consent and specified in the Warning Notice; or
- b. the Applicants reasons for disagreement with the Waning Notice
Council will respond to the Applicant's reply within 7 days of receipt of the Applicant's Reply (Council's Response).

Once the Applicant has received Council's Response, the Applicant must ensure all requirements in Council's Response are complied with immediately.

8. Suspension and revocation - events

Council may revoke or suspend the Consent, with or without issuing a Warning Notice, if any of the following events occurs:

- a. the Applicant does not comply with the requirements of the Consent;
- b. the Applicant's application for consent contains information that is untrue, incomplete or misleading;
- c. the Applicant does not reply to a Warning Notice in the manner required by clause 7;
- d. the Applicant's Reply does not set out the steps the Applicant will take to comply with the requirements of the Warning Notice;
- e. the Applicant does not comply with the requirements of Council's Response;
- f. the Applicant prevents or hinders, or attempts to prevent or hinder, Council from carrying out any inspections in relation to the Consent;
- g. any fees associated with the Consent are not paid by the due date;
- h. any approvals required to be obtained by the Applicant in clause 15 lapse, are not granted or are revoked; or
- i. the Applicant becomes insolvent and cannot fulfil its obligations under the Consent.

9. Suspension and revocation – the Structure

Council may suspend or revoke the Consent immediately, with or without a Warning Notice, if, in Council’s opinion, the Structure:

- a. becomes unsafe; or
- b. is likely to cause environmental damage; or
- c. could harm any person or property.

10. Notice if the Consent is revoked or suspended

The Applicant may request Council to revoke the Consent, with such revocation to take effect 30 days after the date of the request.

Any request by the Applicant for Council to revoke the Consent is subject to the following conditions:

- a. the Applicant cannot request Council to revoke the Consent if the Applicant is in breach of any of the conditions of the Consent;
- b. while Council will consider any request to revoke the Consent, Council will not be bound to agree to revoke the Consent; and
- c. Council may agree to any request to revoke the Consent subject to conditions imposed by Council.

11. Notice if the Consent is revoked or suspended

If Council revokes or suspends the Consent, Council will inform the Applicant by way of written notice.

12. Effect of revocation or suspension of the Consent

If the Applicant receives a notice that Council is revoking or suspending the Consent, the Applicant must, in accordance with the notice:

In the case of suspension of the Consent:

- a. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately.

In the case of revocation of the Consent:

- b. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately in the case of revocation; and either
- c. remove the Structure immediately (where the removal of the Structure does not require the consent of any authority); or
- d. immediately apply to the relevant authority for consent to remove the Structure.

If the Applicant does not comply with the terms of the notice, and remove or cease use of the Structure (as the case may be), Council may remove the Structure.

Removal of the Structure by Council does not prevent Council from taking legal action against the Applicant, including recovering any costs incurred by Council to remove the Structure.

13. No compensation if the Consent is revoked or suspended

Nothing in the Consent renders Council liable to pay any compensation to the Applicant in circumstances where Council suspends or revokes the Consent.

14. Statutory restrictions

The Consent is limited in its operation by the provisions of the Roads Act and any Regulations made under the Roads Act, and is granted subject to the provisions of the Roads Act.

15. Prior to carrying out the Works

The Applicant must, prior to carrying out the Works, obtain any necessary approvals from Council for the Works, the Structure and the Permitted Use under the Environmental Planning and Assessment Act 1979 and the Local Government Act 1993;

The Applicant must comply with all conditions imposed by any approvals of Council, the RMS, the Minister administering the Roads Act or any other authority.

The Applicant is required to give at least 7 days notice to the occupiers of properties adjoining any part of the Public Road in which the Works are to be carried out, of the intention to carry out those Works.

The Applicant must give at least 48 hours written notice to Council's Representative listed at Item 9 at the address listed at Item 10 prior to commencing the Works.

The Applicant is required to deliver to Council's Representative the insurance policy referred to in clause 21 and the bank guarantee referred to in clause 22 prior to commencing the Works, as well as copies of any approvals that the Applicant is required to obtain in respect of the Works, the Structure or the Permitted Use.

16. Condition of Site

Council gives no warranty (either present or future) as to the suitability of the Public Road or the use to which the Public Road may be put. The Applicant is deemed to have sought the Consent with full knowledge of and subject to any prohibitions or restrictions on the use of the Public Road from time to time under or in pursuance of any law.

17. Carrying out the Works

The Applicant must carry out the Works:

- a. in conformity with the description of the Works at Item 5;
- b. in accordance with the approvals listed in clause 15;
- c. to the reasonable satisfaction of Council's Representative;
- d. as expeditiously as practicable in a proper and workmanlike manner;
- e. proceed continuously with the Works until completion of the Works;
- f. with due regard to the safety and rights of the public and for that purpose comply with the requirements of:
 1. Council's Representative;
 2. the WorkCover Authority of New South Wales;
 3. the Department of Industrial Relations and Employment;
 4. the Police Service of New South Wales; and
 5. any other authority;
- g. in a manner that does not unreasonably interfere with the use of the Public Road or any other land by other persons while carrying out the Works;
- h. in a manner that complies with Council's policies and procedures; and
- i. between the hours of 7.00am and 6.00pm on Mondays to Fridays, between 8.00am and 4.00pm on Saturdays and at other times only if previously approved by Council's Representative in writing.

18. Amendments to the Works

If, in Council's opinion, it becomes necessary:

- a. to relocate or remove any portion of the Structure due to:
 1. any work in, on or over the Public Road; or
 2. widening or reconstruction of the Public Road which Council or any other authority wishes to carry out; or
- b. to carry out additional works to the Public Road or the Structure for the safety and protection of the public, the Applicant must, at its own cost;
- c. relocate, carry out the removal or carry out any additional work; and
- d. pay to Council any additional cost or expenditure incurred by Council by reason of the existence, relocation or removal of the Structure.

If no representative of the Applicant is present at the Works site, or if Council's Representative determines an event of emergency has occurred, Council's Representative can take any action to prevent loss of or damage to the whole or any part of the Structure, the Public Road or property adjacent to the Structure, or to prevent personal injury to any person.

In such circumstances, where Council's Representative reasonably determines that the Applicant would have been liable to take such action, the cost of Council's action must be paid by the Applicant to Council as a debt due to Council. Any such action taken by Council's Representative will not relieve the Applicant of any liability or obligation under the Consent.

19. Council's inspection

Council reserves the right to inspect the Public Road, the Structure and the Works at any time with reasonable notice and at any time in an emergency.

20. Charges

The Applicant is required to pay to Council an annual charge for the Consent in accordance with section 611 of the Local Government Act 1993 which is set out at Item 11 (the Annual Charge).

The Annual Charge must be paid prior to use of the Structure being commenced. The Annual Charge is to be paid in the manner advised by Council's Representative, as amended from time to time.

Council may amend the amount of the Annual Charge at any time.

21. Insurance and Indemnities

The Applicant indemnifies Council and keeps Council indemnified from and against all actions, claims and demands if any arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent or any damage to the Applicant's property in accordance with the Consent.

Council can pay, satisfy, defend, compromise or settle any claim arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent and any amount paid by Council in doing so is a debt due to Council by the Applicant and must be repaid on demand.

The Applicant indemnifies Council against any liability to pay taxes or charges payable now or in the future in respect of the Works, the Structure or the Consent.

The Applicant must obtain and keep current an insurance policy:

- a. noting Council's interest as the appropriate roads authority of the Public Road and listing Council as co-insured; and
- b. covering liability to the public for not less than the amount in Item 12 for each accident or event.

The insurance policy of the Applicant must be produced to Council's Representative prior to commencing the Works along with the receipt for the last premium. The Applicant must provide certificates of currency to Council on an annual basis while the Consent remains in force.

The Applicant must not void, reduce or cancel any insurance policy in respect of the Public Road, the Structure or the Works.

22. Bank Guarantee

Before commencing the Works, the Applicant must deliver to Council's Representative a bank guarantee to secure the satisfaction of the Applicant's obligations under the Consent (the Bank Guarantee).

The Bank Guarantee must:

- a. be in a form acceptable to Council and for an amount not less than the amount specified in Item 13; and
- b. be payable to Council at any time while the Consent is in force.

If the Applicant fails to satisfy any of its obligations under the Consent, or if Council incurs any expense under any term of the Consent, Council may call on the Bank Guarantee and remedy the Applicant's failure or reimburse Council for that expense without prejudice to any other right Council may have against the Applicant.

Council will return the Bank Guarantee, or any remainder, to the Applicant when the Applicant's obligations under the Consent have been complied with to the reasonable satisfaction of Council's Representative.

23. End of the Consent

When the Consent ends or is revoked, any part of the Structure remaining within the Public Road will be deemed to be an obstruction or encroachment under section 107 of the Roads Act.

The Applicant or any other person using or capable of using the Structure after the Consent ends will be deemed to be a person who causes an obstruction or encroachment on a public road for the purposes of section 107(1)(a) of the Roads Act.

When the Consent ends the Applicant must, in any manner directed by Council and as quickly as practicable, remove the Structure and make good any damage caused by the removal. The Applicant must also pay any outstanding fees and charges due to Council under the Consent.

If the Applicant does not remove the Structure or make good any damage caused by the removal at the expiration of the Consent, Council may undertake such actions on behalf of the Applicant and the costs incurred by Council in doing so will be a debt due from the Applicant to Council, payable on demand.

24. Resolution of disputes

Council will endeavour to resolve any disputes with the Applicant by discussing them with the Applicant. However, in the absence of agreement, Council's decision will be final. Nothing in this clause precludes the Applicant from taking legal action against Council in respect of Council's decision.

25. Notices

Any notice given under or in accordance with the Consent can be given in the manner provided in sections 254 and 255 of the Roads Act.

26. Livestock

- a. Cattle must be fenced at all times behind an electric fence with pigtail pickets rather than star pickets.
- b. Cattle must be taken off the road at night.
- c. No entire male cattle (bulls) are allowed on roadsides.
- d. No horses are allowed to feed on roadsides

27. General

Nothing contained in the Consent:

- a. prejudices or affects the rights of the public to pass along the Public Road;
- b. authorises any nuisance or permanent obstruction of the Public Road;
- c. confers on the Applicant any exclusive right or title to that part of the Structure within the boundaries of the Public Road; or
- d. in any way restricts or limits the powers of Council in respect of the Public Road.

A certificate signed by Council's Representative as to the cost of any work carried out by Council or on Council's behalf will be final and conclusive evidence of that cost.

The Applicant must pay all reasonable legal costs incurred by Council in connection with the preparation of the Consent and with remedying any breach of the requirements of the Consent.

The Applicant must comply with all laws relating to the Works, the Structure and the Public Road.

Commencement of the Works constitutes acceptance of all conditions of the Consent.

A waiver or indulgence granted by Council in respect of any non-compliance by the Applicant with the terms of the Consent does not constitute a future or past waiver of similar non-compliance. A failure to act by Council in response to any non-compliance does not constitute a waiver of such conduct.

A reference to an Item is attached in Schedule 1.

1. This Document provides consent

This document provides, and sets out the terms and conditions of, the consent (the Consent) granted by Singleton Council (Council) as the appropriate roads authority under Division 3 of Part 9 of the Roads Act 1993 (the Roads Act) in response to the application for consent filed by the applicant listed in Item 1 (the Applicant).

Consent granted is subject to the terms and conditions of the Consent, and any Annexure and Schedules to the Consent.

2. Who has consent?

The Consent is granted to the Applicant. The Consent cannot be assigned or transferred to any other person or company.

3. What does the Consent enable?

The Consent enables the Applicant to:

- a. erect the Structure in, on or over the Public Road;
- b. carry out the Works in, on or over the Public Road; and
- c. use the Structure in accordance with the Permitted Use and the terms and conditions of the Consent.

The Structure is described in Item 2.

The Benefiting Property is described in Item 3.

The Public Road is described in Item 4.

The Works are described in Item 5.

The Permitted Use is described in Item 6.

4. When will the Consent commence?

The Consent commences on the date in Item 7.

5. When will the Consent end?

The Consent will end on the date in Item 8.

If there is no date in Item 8, the Consent will end on the earlier of the following occasions:

- a. when Council decides to revoke the Consent; or
- b. when the Applicant requests that Council revoke the Consent.

6. In which circumstances can Council revoke the Consent?

Council can revoke the Consent at any time and for any reason under section 140 of the Roads Act.

If section 140 of the Roads Act is repealed, the Consent is revoked when that repeal takes effect.

Without limiting the circumstances in which Council may revoke the Consent, Council may revoke or suspend the Consent in accordance with clauses 7-10.

7. Warning Notice

If, in Council's opinion, the Applicant is not complying with any of the terms and conditions of the Consent, Council may issue a written warning notice to the Applicant (the Warning Notice).

The Applicant must reply in writing to the Warning Notice (the Applicant's Reply), and the Applicant's Reply must be received by Council within 7 days of the date of the Warning Notice.

The Applicant's Reply must contain the following information:

- a. steps the Applicant proposes to take to meet the terms and condition of the consent as outlined in the consent and specified in the Warning Notice; or
- b. the Applicants reasons for disagreement with the Waning Notice
Council will respond to the Applicant's reply within 7 days of receipt of the Applicant's Reply (Council's Response).

Once the Applicant has received Council's Response, the Applicant must ensure all requirements in Council's Response are complied with immediately.

8. Suspension and revocation - events

Council may revoke or suspend the Consent, with or without issuing a Warning Notice, if any of the following events occurs:

- a. the Applicant does not comply with the requirements of the Consent;
- b. the Applicant's application for consent contains information that is untrue, incomplete or misleading;
- c. the Applicant does not reply to a Warning Notice in the manner required by clause 7;
- d. the Applicant's Reply does not set out the steps the Applicant will take to comply with the requirements of the Warning Notice;
- e. the Applicant does not comply with the requirements of Council's Response;
- f. the Applicant prevents or hinders, or attempts to prevent or hinder, Council from carrying out any inspections in relation to the Consent;
- g. any fees associated with the Consent are not paid by the due date;
- h. any approvals required to be obtained by the Applicant in clause 15 lapse, are not granted or are revoked; or
- i. the Applicant becomes insolvent and cannot fulfil its obligations under the Consent.

9. Suspension and revocation – the Structure

Council may suspend or revoke the Consent immediately, with or without a Warning Notice, if, in Council's opinion, the Structure:

- a. becomes unsafe; or
- b. is likely to cause environmental damage; or
- c. could harm any person or property.

10. Notice if the Consent is revoked or suspended

The Applicant may request Council to revoke the Consent, with such revocation to take effect 30 days after the date of the request.

Any request by the Applicant for Council to revoke the Consent is subject to the following conditions:

- a. the Applicant cannot request Council to revoke the Consent if the Applicant is in breach of any of the conditions of the Consent;
- b. while Council will consider any request to revoke the Consent, Council will not be bound to agree to revoke the Consent; and
- c. Council may agree to any request to revoke the Consent subject to conditions imposed by Council.

11. Notice if the Consent is revoked or suspended

If Council revokes or suspends the Consent, Council will inform the Applicant by way of written notice.

12. Effect of revocation or suspension of the Consent

If the Applicant receives a notice that Council is revoking or suspending the Consent, the Applicant must, in accordance with the notice:

In the case of suspension of the Consent:

- a. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately.

In the case of revocation of the Consent:

- b. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately in the case of revocation; and either
- c. remove the Structure immediately (where the removal of the Structure does not require the consent of any authority); or
- d. immediately apply to the relevant authority for consent to remove the Structure.

If the Applicant does not comply with the terms of the notice, and remove or cease use of the Structure (as the case may be), Council may remove the Structure.

Removal of the Structure by Council does not prevent Council from taking legal action against the Applicant, including recovering any costs incurred by Council to remove the Structure.

13. No compensation if the Consent is revoked or suspended

Nothing in the Consent renders Council liable to pay any compensation to the Applicant in circumstances where Council suspends or revokes the Consent.

14. Statutory restrictions

The Consent is limited in its operation by the provisions of the Roads Act and any Regulations made under the Roads Act, and is granted subject to the provisions of the Roads Act.

15. Prior to carrying out the Works

The Applicant must, prior to carrying out the Works, obtain any necessary approvals from Council for the Works, the Structure and the Permitted Use under the Environmental Planning and Assessment Act 1979 and the Local Government Act 1993;

The Applicant must comply with all conditions imposed by any approvals of Council, the RMS, the Minister administering the Roads Act or any other authority.

The Applicant is required to give at least 7 days notice to the occupiers of properties adjoining any part of the Public Road in which the Works are to be carried out, of the intention to carry out those Works.

The Applicant must give at least 48 hours written notice to Council's Representative listed at Item 9 at the address listed at Item 10 prior to commencing the Works.

The Applicant is required to deliver to Council's Representative the insurance policy referred to in clause 21 and the bank guarantee referred to in clause 22 prior to commencing the Works, as well as copies of any approvals that the Applicant is required to obtain in respect of the Works, the Structure or the Permitted Use.

16. Condition of Site

Council gives no warranty (either present or future) as to the suitability of the Public Road or the use to which the Public Road may be put. The Applicant is deemed to have sought the Consent with full knowledge of and subject to any prohibitions or restrictions on the use of the Public Road from time to time under or in pursuance of any law.

17. Carrying out the Works

The Applicant must carry out the Works:

- a. in conformity with the description of the Works at Item 5;
- b. in accordance with the approvals listed in clause 15;
- c. to the reasonable satisfaction of Council's Representative;
- d. as expeditiously as practicable in a proper and workmanlike manner;
- e. proceed continuously with the Works until completion of the Works;
- f. with due regard to the safety and rights of the public and for that purpose comply with the requirements of:
 - 1. Council's Representative;
 - 2. the WorkCover Authority of New South Wales;
 - 3. the Department of Industrial Relations and Employment;
 - 4. the Police Service of New South Wales; and
 - 5. any other authority;
- g. in a manner that does not unreasonably interfere with the use of the Public Road or any other land by other persons while carrying out the Works;
- h. in a manner that complies with Council's policies and procedures; and
- i. between the hours of 7.00am and 6.00pm on Mondays to Fridays, between 8.00am and 4.00pm on Saturdays and at other times only if previously approved by Council's Representative in writing.

18. Amendments to the Works

If, in Council's opinion, it becomes necessary:

- a. to relocate or remove any portion of the Structure due to:
 - 1. any work in, on or over the Public Road; or
 - 2. widening or reconstruction of the Public Road which Council or any other authority wishes to carry out; or
- b. to carry out additional works to the Public Road or the Structure for the safety and protection of the public, the Applicant must, at its own cost:
- c. relocate, carry out the removal or carry out any additional work; and
- d. pay to Council any additional cost or expenditure incurred by Council by reason of the existence, relocation or removal of the Structure.

If no representative of the Applicant is present at the Works site, or if Council's Representative determines an event of emergency has occurred, Council's Representative can take any action to prevent loss of or damage to the whole or any part of the Structure, the Public Road or property adjacent to the Structure, or to prevent personal injury to any person.

In such circumstances, where Council's Representative reasonably determines that the Applicant would have been liable to take such action, the cost of Council's action must be paid by the Applicant to Council as a debt due to Council. Any such action taken by Council's Representative will not relieve the Applicant of any liability or obligation under the Consent.

19. Council's inspection

Council reserves the right to inspect the Public Road, the Structure and the Works at any time with reasonable notice and at any time in an emergency.

20. Charges

The Applicant is required to pay to Council an annual charge for the Consent in accordance with section 611 of the Local Government Act 1993 which is set out at Item 11 (the Annual Charge).

The Annual Charge must be paid prior to use of the Structure being commenced. The Annual Charge is to be paid in the manner advised by Council's Representative, as amended from time to time.

Council may amend the amount of the Annual Charge at any time.

21. Insurance and Indemnities

The Applicant indemnifies Council and keeps Council indemnified from and against all actions, claims and demands if any arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent or any damage to the Applicant's property in accordance with the Consent.

Council can pay, satisfy, defend, compromise or settle any claim arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent and any amount paid by Council in doing so is a debt due to Council by the Applicant and must be repaid on demand.

The Applicant indemnifies Council against any liability to pay taxes or charges payable now or in the future in respect of the Works, the Structure or the Consent.

The Applicant must obtain and keep current an insurance policy:

- a.** noting Council's interest as the appropriate roads authority of the Public Road and listing Council as co-insured; and
- b.** covering liability to the public for not less than the amount in Item 12 for each accident or event.

The insurance policy of the Applicant must be produced to Council's Representative prior to commencing the Works along with the receipt for the last premium. The Applicant must provide certificates of currency to Council on an annual basis while the Consent remains in force.

The Applicant must not void, reduce or cancel any insurance policy in respect of the Public Road, the Structure or the Works.

22. Bank Guarantee

Before commencing the Works, the Applicant must deliver to Council's Representative a bank guarantee to secure the satisfaction of the Applicant's obligations under the Consent (the Bank Guarantee).

The Bank Guarantee must:

- a.** be in a form acceptable to Council and for an amount not less than the amount specified in Item 13; and
- b.** be payable to Council at any time while the Consent is in force.

If the Applicant fails to satisfy any of its obligations under the Consent, or if Council incurs any expense under any term of the Consent, Council may call on the Bank Guarantee and remedy the Applicant's failure or reimburse Council for that expense without prejudice to any other right Council may have against the Applicant.

Council will return the Bank Guarantee, or any remainder, to the Applicant when the Applicant's obligations under the Consent have been complied with to the reasonable satisfaction of Council's Representative.

23. End of the Consent

When the Consent ends or is revoked, any part of the Structure remaining within the Public Road will be deemed to be an obstruction or encroachment under section 107 of the Roads Act.

The Applicant or any other person using or capable of using the Structure after the Consent ends will be deemed to be a person who causes an obstruction or encroachment on a public road for the purposes of section 107(1)(a) of the Roads Act.

When the Consent ends the Applicant must, in any manner directed by Council and as quickly as practicable, remove the Structure and make good any damage caused by the removal. The Applicant must also pay any outstanding fees and charges due to Council under the Consent.

If the Applicant does not remove the Structure or make good any damage caused by the removal at the expiration of the Consent, Council may undertake such actions on behalf of the Applicant and the costs incurred by Council in doing so will be a debt due from the Applicant to Council, payable on demand.

24. Resolution of disputes

Council will endeavour to resolve any disputes with the Applicant by discussing them with the Applicant. However, in the absence of agreement, Council's decision will be final. Nothing in this clause precludes the Applicant from taking legal action against Council in respect of Council's decision.

25. Notices

Any notice given under or in accordance with the Consent can be given in the manner provided in sections 254 and 255 of the Roads Act.

26. Livestock

- a. Cattle must be fenced at all times behind an electric fence with pigtail pickets rather than star pickets.
- b. Cattle must be taken off the road at night.
- c. No entire male cattle (bulls) are allowed on roadsides.
- d. No horses are allowed to feed on roadsides

27. General

Nothing contained in the Consent:

- a. prejudices or affects the rights of the public to pass along the Public Road;
- b. authorises any nuisance or permanent obstruction of the Public Road;
- c. confers on the Applicant any exclusive right or title to that part of the Structure within the boundaries of the Public Road; or
- d. in any way restricts or limits the powers of Council in respect of the Public Road.

A certificate signed by Council's Representative as to the cost of any work carried out by Council or on Council's behalf will be final and conclusive evidence of that cost.

The Applicant must pay all reasonable legal costs incurred by Council in connection with the preparation of the Consent and with remedying any breach of the requirements of the Consent.

The Applicant must comply with all laws relating to the Works, the Structure and the Public Road.

Commencement of the Works constitutes acceptance of all conditions of the Consent.

A waiver or indulgence granted by Council in respect of any non-compliance by the Applicant with the terms of the Consent does not constitute a future or past waiver of similar non-compliance. A failure to act by Council in response to any non-compliance does not constitute a waiver of such conduct.

A reference to an Item is attached in Schedule 1.

APPENDIX 1

1. The Applicant shall be responsible for investigating and locating the position and depth of any public utility service in particular Telstra cables, gas, electricity, water, sewer and stormwater and other private services such as irrigation pump lines before any works commence on site and ensure that no damage or conflict shall result.
2. No work shall be carried out during periods of adverse weather conditions or any other prevailing circumstances that make the work or traffic control hazardous.
3. Council shall be reimbursed by the Applicant when requested, for any expenses incurred in restoring the road pavement, or other sections of the site, within the road reservation.
4. The site shall be left in a safe condition cleared of debris when the works are completed.
5. The agreement cannot be assigned or transferred to another person. Council reserves the right to revoke this consent at any time.
6. This approval does not extend to the use of any other machinery or works within the road reserve.
7. Council is indemnified against any claims that may arise in regard to the works you will be undertaking.
8. Any Construction works are to be completed in accordance with Singleton Council's Development Construction Specification CQC Rev 3 – Quality Control Requirements available on Council's website www.singleton.nsw.gov.au
9. Traffic control is to be set out as per the plans supplied to council and installed by an appropriately qualified person.
10. Traffic stoppage to be limited to a maximum of 15 minutes.
11. New policy documentation must be provided to Singleton Council before the above expiry of the Certificate of Currency which is 30/11/2024.
12. The authority shall only extend to the temporary closure for a maximum of four (4) blasting events per week in the period of Monday to Saturday 9.00am to 5:00pm,

subject to notice being given to Singleton Council on each occasion, in the approved format.

13. Notification is provided to Singleton Council by email, for any blast after 7:00am, by 12 noon on the previous working day.
14. The temporary road closure in the local newspaper 'Singleton Argus' in the paper issue prior to blasting by the applicant.
15. Prior to re-opening the road, Yancoal Mt Thorley Warkworth shall inspect and repair any damage thereto and shall not re-open the road until such time as the road has been restored to a safe and trafficable condition.
16. The time of closures not to coincide with changes of shift workers from other mines. Blasting times should be co-ordinated such that they are either a maximum of 5 minutes or a minimum of 45 minutes apart. Further each closure is limited to a maximum of 15 minutes. The road shall be closed for periods no longer than is necessary for the purpose.
17. Any sign must be maintained while the work is being carried out and must be removed when the work has been completed
18. Prior to completion of the work, restore any damage, reinstate any disturbed areas, and clean up the site to match conditions of the site prior to commencement, leave the site clean and tidy, and free of any rubbish and debris.
19. Please advise Councils Customer Service on 02 6578 7290 or email council@singleton.nsw.gov.au once works have been completed.

Subject: Application for the use of a Council Road
Applicant: Yancoal Mt Thorley Warkworth
Application No: 20287/2024
Benefiting Property: Jerrys Plains Road GOULDSVILLE 2330

Reference is made to your application received on Tuesday, 15 October 2024 for works within the road reserve of Jerrys Plains Road for the sole purpose of mine blasting road closure as described in your application.

Jerrys Plains Road is a classified local road and Singleton Council is the Roads Authority. Consent from Singleton Council is required within the provision of the *Roads Act 1993*.

Consent is granted in accordance with the attached terms and conditions. A copy of the attached agreement should be signed by an authorised person and returned to Council for processing.

If you require any further information or wish to discuss the details contained within the approval, please contact Harkamal Singh on the above number.

Yours faithfully

Damian Morris
Manager Infrastructure Services

1. This Document provides consent

This document provides, and sets out the terms and conditions of, the consent (the Consent) granted by Singleton Council (Council) as the appropriate roads authority under Division 3 of Part 9 of the Roads Act 1993 (the Roads Act) in response to the application for consent filed by the applicant listed in Item 1 (the Applicant).

Consent granted is subject to the terms and conditions of the Consent, and any Annexure and Schedules to the Consent.

2. Who has consent?

The Consent is granted to the Applicant. The Consent cannot be assigned or transferred to any other person or company.

3. What does the Consent enable?

The Consent enables the Applicant to:

- a. erect the Structure in, on or over the Public Road;
- b. carry out the Works in, on or over the Public Road; and
- c. use the Structure in accordance with the Permitted Use and the terms and conditions of the Consent.

The Structure is described in Item 2.

The Benefiting Property is described in Item 3.

The Public Road is described in Item 4.

The Works are described in Item 5.

The Permitted Use is described in Item 6.

4. When will the Consent commence?

The Consent commences on the date in Item 7.

5. When will the Consent end?

The Consent will end on the date in Item 8.

If there is no date in Item 8, the Consent will end on the earlier of the following occasions:

- a. when Council decides to revoke the Consent; or
- b. when the Applicant requests that Council revoke the Consent.

6. In which circumstances can Council revoke the Consent?

Council can revoke the Consent at any time and for any reason under section 140 of the Roads Act.

If section 140 of the Roads Act is repealed, the Consent is revoked when that repeal takes effect.

Without limiting the circumstances in which Council may revoke the Consent, Council may revoke or suspend the Consent in accordance with clauses 7-10.

7. Warning Notice

If, in Council's opinion, the Applicant is not complying with any of the terms and conditions of the Consent, Council may issue a written warning notice to the Applicant (the Warning Notice).

The Applicant must reply in writing to the Warning Notice (the Applicant's Reply), and the Applicant's Reply must be received by Council within 7 days of the date of the Warning Notice.

The Applicant's Reply must contain the following information:

- a. steps the Applicant proposes to take to meet the terms and condition of the consent as outlined in the consent and specified in the Warning Notice; or
- b. the Applicants reasons for disagreement with the Waning Notice
Council will respond to the Applicant's reply within 7 days of receipt of the Applicant's Reply (Council's Response).

Once the Applicant has received Council's Response, the Applicant must ensure all requirements in Council's Response are complied with immediately.

8. Suspension and revocation - events

Council may revoke or suspend the Consent, with or without issuing a Warning Notice, if any of the following events occurs:

- a. the Applicant does not comply with the requirements of the Consent;
- b. the Applicant's application for consent contains information that is untrue, incomplete or misleading;
- c. the Applicant does not reply to a Warning Notice in the manner required by clause 7;
- d. the Applicant's Reply does not set out the steps the Applicant will take to comply with the requirements of the Warning Notice;
- e. the Applicant does not comply with the requirements of Council's Response;
- f. the Applicant prevents or hinders, or attempts to prevent or hinder, Council from carrying out any inspections in relation to the Consent;
- g. any fees associated with the Consent are not paid by the due date;
- h. any approvals required to be obtained by the Applicant in clause 15 lapse, are not granted or are revoked; or
- i. the Applicant becomes insolvent and cannot fulfil its obligations under the Consent.

9. Suspension and revocation – the Structure

Council may suspend or revoke the Consent immediately, with or without a Warning Notice, if, in Council's opinion, the Structure:

- a. becomes unsafe; or
- b. is likely to cause environmental damage; or
- c. could harm any person or property.

10. Notice if the Consent is revoked or suspended

The Applicant may request Council to revoke the Consent, with such revocation to take effect 30 days after the date of the request.

Any request by the Applicant for Council to revoke the Consent is subject to the following conditions:

- a. the Applicant cannot request Council to revoke the Consent if the Applicant is in breach of any of the conditions of the Consent;
- b. while Council will consider any request to revoke the Consent, Council will not be bound to agree to revoke the Consent; and
- c. Council may agree to any request to revoke the Consent subject to conditions imposed by Council.

11. Notice if the Consent is revoked or suspended

If Council revokes or suspends the Consent, Council will inform the Applicant by way of written notice.

12. Effect of revocation or suspension of the Consent

If the Applicant receives a notice that Council is revoking or suspending the Consent, the Applicant must, in accordance with the notice:

In the case of suspension of the Consent:

- a. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately.

In the case of revocation of the Consent:

- b. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately in the case of revocation; and either
- c. remove the Structure immediately (where the removal of the Structure does not require the consent of any authority); or
- d. immediately apply to the relevant authority for consent to remove the Structure.

If the Applicant does not comply with the terms of the notice, and remove or cease use of the Structure (as the case may be), Council may remove the Structure.

Removal of the Structure by Council does not prevent Council from taking legal action against the Applicant, including recovering any costs incurred by Council to remove the Structure.

13. No compensation if the Consent is revoked or suspended

Nothing in the Consent renders Council liable to pay any compensation to the Applicant in circumstances where Council suspends or revokes the Consent.

14. Statutory restrictions

The Consent is limited in its operation by the provisions of the Roads Act and any Regulations made under the Roads Act, and is granted subject to the provisions of the Roads Act.

15. Prior to carrying out the Works

The Applicant must, prior to carrying out the Works, obtain any necessary approvals from Council for the Works, the Structure and the Permitted Use under the Environmental Planning and Assessment Act 1979 and the Local Government Act 1993;

The Applicant must comply with all conditions imposed by any approvals of Council, the RMS, the Minister administering the Roads Act or any other authority.

The Applicant is required to give at least 7 days notice to the occupiers of properties adjoining any part of the Public Road in which the Works are to be carried out, of the intention to carry out those Works.

The Applicant must give at least 48 hours written notice to Council's Representative listed at Item 9 at the address listed at Item 10 prior to commencing the Works.

The Applicant is required to deliver to Council's Representative the insurance policy referred to in clause 21 and the bank guarantee referred to in clause 22 prior to commencing the Works, as well as copies of any approvals that the Applicant is required to obtain in respect of the Works, the Structure or the Permitted Use.

16. Condition of Site

Council gives no warranty (either present or future) as to the suitability of the Public Road or the use to which the Public Road may be put. The Applicant is deemed to have sought the Consent with full knowledge of and subject to any prohibitions or restrictions on the use of the Public Road from time to time under or in pursuance of any law.

17. Carrying out the Works

The Applicant must carry out the Works:

- a. in conformity with the description of the Works at Item 5;
- b. in accordance with the approvals listed in clause 15;
- c. to the reasonable satisfaction of Council's Representative;
- d. as expeditiously as practicable in a proper and workmanlike manner;
- e. proceed continuously with the Works until completion of the Works;
- f. with due regard to the safety and rights of the public and for that purpose comply with the requirements of:
 - 1. Council's Representative;
 - 2. the WorkCover Authority of New South Wales;
 - 3. the Department of Industrial Relations and Employment;
 - 4. the Police Service of New South Wales; and
 - 5. any other authority;
- g. in a manner that does not unreasonably interfere with the use of the Public Road or any other land by other persons while carrying out the Works;
- h. in a manner that complies with Council's policies and procedures; and
- i. between the hours of 7.00am and 6.00pm on Mondays to Fridays, between 8.00am and 4.00pm on Saturdays and at other times only if previously approved by Council's Representative in writing.

18. Amendments to the Works

If, in Council's opinion, it becomes necessary:

- a. to relocate or remove any portion of the Structure due to:
 - 1. any work in, on or over the Public Road; or
 - 2. widening or reconstruction of the Public Road which Council or any other authority wishes to carry out; or
- b. to carry out additional works to the Public Road or the Structure for the safety and protection of the public, the Applicant must, at its own cost:
- c. relocate, carry out the removal or carry out any additional work; and
- d. pay to Council any additional cost or expenditure incurred by Council by reason of the existence, relocation or removal of the Structure.

If no representative of the Applicant is present at the Works site, or if Council's Representative determines an event of emergency has occurred, Council's Representative can take any action to prevent loss of or damage to the whole or any part of the Structure, the Public Road or property adjacent to the Structure, or to prevent personal injury to any person.

In such circumstances, where Council's Representative reasonably determines that the Applicant would have been liable to take such action, the cost of Council's action must be paid by the Applicant to Council as a debt due to Council. Any such action taken by Council's Representative will not relieve the Applicant of any liability or obligation under the Consent.

19. Council's inspection

Council reserves the right to inspect the Public Road, the Structure and the Works at any time with reasonable notice and at any time in an emergency.

20. Charges

The Applicant is required to pay to Council an annual charge for the Consent in accordance with section 611 of the Local Government Act 1993 which is set out at Item 11 (the Annual Charge).

The Annual Charge must be paid prior to use of the Structure being commenced. The Annual Charge is to be paid in the manner advised by Council's Representative, as amended from time to time.

Council may amend the amount of the Annual Charge at any time.

21. Insurance and Indemnities

The Applicant indemnifies Council and keeps Council indemnified from and against all actions, claims and demands if any arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent or any damage to the Applicant's property in accordance with the Consent.

Council can pay, satisfy, defend, compromise or settle any claim arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent and any amount paid by Council in doing so is a debt due to Council by the Applicant and must be repaid on demand.

The Applicant indemnifies Council against any liability to pay taxes or charges payable now or in the future in respect of the Works, the Structure or the Consent.

The Applicant must obtain and keep current an insurance policy:

- a. noting Council's interest as the appropriate roads authority of the Public Road and listing Council as co-insured; and
- b. covering liability to the public for not less than the amount in Item 12 for each accident or event.

The insurance policy of the Applicant must be produced to Council's Representative prior to commencing the Works along with the receipt for the last premium. The Applicant must provide certificates of currency to Council on an annual basis while the Consent remains in force.

The Applicant must not void, reduce or cancel any insurance policy in respect of the Public Road, the Structure or the Works.

22. Bank Guarantee

Before commencing the Works, the Applicant must deliver to Council's Representative a bank guarantee to secure the satisfaction of the Applicant's obligations under the Consent (the Bank Guarantee).

The Bank Guarantee must:

- a. be in a form acceptable to Council and for an amount not less than the amount specified in Item 13; and
- b. be payable to Council at any time while the Consent is in force.

If the Applicant fails to satisfy any of its obligations under the Consent, or if Council incurs any expense under any term of the Consent, Council may call on the Bank Guarantee and remedy the Applicant's failure or reimburse Council for that expense without prejudice to any other right Council may have against the Applicant.

Council will return the Bank Guarantee, or any remainder, to the Applicant when the Applicant's obligations under the Consent have been complied with to the reasonable satisfaction of Council's Representative.

23. End of the Consent

When the Consent ends or is revoked, any part of the Structure remaining within the Public Road will be deemed to be an obstruction or encroachment under section 107 of the Roads Act.

The Applicant or any other person using or capable of using the Structure after the Consent ends will be deemed to be a person who causes an obstruction or encroachment on a public road for the purposes of section 107(1)(a) of the Roads Act.

When the Consent ends the Applicant must, in any manner directed by Council and as quickly as practicable, remove the Structure and make good any damage caused by the removal. The Applicant must also pay any outstanding fees and charges due to Council under the Consent.

If the Applicant does not remove the Structure or make good any damage caused by the removal at the expiration of the Consent, Council may undertake such actions on behalf of the Applicant and the costs incurred by Council in doing so will be a debt due from the Applicant to Council, payable on demand.

24. Resolution of disputes

Council will endeavour to resolve any disputes with the Applicant by discussing them with the Applicant. However, in the absence of agreement, Council's decision will be final. Nothing in this clause precludes the Applicant from taking legal action against Council in respect of Council's decision.

25. Notices

Any notice given under or in accordance with the Consent can be given in the manner provided in sections 254 and 255 of the Roads Act.

26. Livestock

- a. Cattle must be fenced at all times behind an electric fence with pigtail pickets rather than star pickets.
- b. Cattle must be taken off the road at night.
- c. No entire male cattle (bulls) are allowed on roadsides.
- d. No horses are allowed to feed on roadsides

27. General

Nothing contained in the Consent:

- a. prejudices or affects the rights of the public to pass along the Public Road;
- b. authorises any nuisance or permanent obstruction of the Public Road;
- c. confers on the Applicant any exclusive right or title to that part of the Structure within the boundaries of the Public Road; or
- d. in any way restricts or limits the powers of Council in respect of the Public Road.

A certificate signed by Council's Representative as to the cost of any work carried out by Council or on Council's behalf will be final and conclusive evidence of that cost.

The Applicant must pay all reasonable legal costs incurred by Council in connection with the preparation of the Consent and with remedying any breach of the requirements of the Consent.

The Applicant must comply with all laws relating to the Works, the Structure and the Public Road.

Commencement of the Works constitutes acceptance of all conditions of the Consent.

A waiver or indulgence granted by Council in respect of any non-compliance by the Applicant with the terms of the Consent does not constitute a future or past waiver of similar non-compliance. A failure to act by Council in response to any non-compliance does not constitute a waiver of such conduct.

A reference to an Item is attached in Schedule 1.

APPENDIX 1

1. The Applicant shall be responsible for investigating and locating the position and depth of any public utility service in particular Telstra cables, gas, electricity, water, sewer and stormwater and other private services such as irrigation pump lines before any works commence on site and ensure that no damage or conflict shall result.
2. No work shall be carried out during periods of adverse weather conditions or any other prevailing circumstances that make the work or traffic control hazardous.
3. Council shall be reimbursed by the Applicant when requested, for any expenses incurred in restoring the road pavement, or other sections of the site, within the road reservation.
4. The site shall be left in a safe condition cleared of debris when the works are completed.
5. The agreement cannot be assigned or transferred to another person. Council reserves the right to revoke this consent at any time.
6. This approval does not extend to the use of any other machinery or works within the road reserve.
7. Council is indemnified against any claims that may arise in regard to the works you will be undertaking.
8. Any Construction works are to be completed in accordance with Singleton Council's Development Construction Specification CQC Rev 3 – Quality Control Requirements available on Council's website www.singleton.nsw.gov.au
9. Road Occupancy License (ROL) and concurrence from Transport for NSW (TfNSW) are required before performing the stop/slow or closing the state road for blasting purpose as mentioned in S138 application; Provided ROL will expire on 28/12/2024 and must be renewed before the expiry date; ROL must be valid until the expiry date of current S138 permit.
10. Traffic control is to be set out as per the plans supplied to council and installed by an appropriately qualified person.
11. Traffic stoppage to be limited to a maximum of 15 minutes.

12. New policy documentation must be provided to Singleton Council before the above expiry of the Certificate of Currency which is 30/11/2024.
13. The authority shall only extend to the temporary closure for a maximum of four (4) blasting events per week in the period of Monday to Saturday 9.00am to 5:00pm, subject to notice being given to Singleton Council on each occasion, in the approved format.
14. Notification is provided to Singleton Council by email, for any blast after 7:00am, by 12 noon on the previous working day.
15. The temporary road closure in the local newspaper 'Singleton Argus' in the paper issue prior to blasting by the applicant.
16. Prior to re-opening the road, Yancoal Mt Thorley Warkworth shall inspect and repair any damage thereto and shall not re-open the road until such time as the road has been restored to a safe and trafficable condition.
17. The time of closures not to coincide with changes of shift workers from other mines. Blasting times should be co-ordinated such that they are either a maximum of 5 minutes or a minimum of 45 minutes apart. Further each closure is limited to a maximum of 15 minutes. The road shall be closed for periods no longer than is necessary for the purpose.
18. Any sign must be maintained while the work is being carried out and must be removed when the work has been completed
19. Prior to completion of the work, restore any damage, reinstate any disturbed areas, and clean up the site to match conditions of the site prior to commencement, leave the site clean and tidy, and free of any rubbish and debris.
20. Please advise Councils Customer Service on 02 6578 7290 or email council@singleton.nsw.gov.au once works have been completed.

Yancoal Mt Thorley Warkworth
PO Box 267
Singleton NSW 2330

Subject: Application for the use of a Council Road
Applicant: Yancoal Mt Thorley Warkworth
Application No: 20288/2024
Benefiting Property: Jerrys Plains Road JERRYS PLAINS 2330

Reference is made to your application received on Tuesday, 15 October 2024 for works within the road reserve of Jerrys Plains Road for the sole purpose of mine blasting road closure as described in your application.

Jerrys Plains Road is a classified local road and Singleton Council is the Roads Authority. Consent from Singleton Council is required within the provision of the *Roads Act 1993*.

Consent is granted in accordance with the attached terms and conditions. A copy of the attached agreement should be signed by an authorised person and returned to Council for processing.

If you require any further information or wish to discuss the details contained within the approval, please contact Harkamal Singh on the above number.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Damian Morris'.

Damian Morris
Manager Infrastructure Services

1. This Document provides consent

This document provides, and sets out the terms and conditions of, the consent (the Consent) granted by Singleton Council (Council) as the appropriate roads authority under Division 3 of Part 9 of the Roads Act 1993 (the Roads Act) in response to the application for consent filed by the applicant listed in Item 1 (the Applicant).

Consent granted is subject to the terms and conditions of the Consent, and any Annexure and Schedules to the Consent.

2. Who has consent?

The Consent is granted to the Applicant. The Consent cannot be assigned or transferred to any other person or company.

3. What does the Consent enable?

The Consent enables the Applicant to:

- a. erect the Structure in, on or over the Public Road;
- b. carry out the Works in, on or over the Public Road; and
- c. use the Structure in accordance with the Permitted Use and the terms and conditions of the Consent.

The Structure is described in Item 2.

The Benefiting Property is described in Item 3.

The Public Road is described in Item 4.

The Works are described in Item 5.

The Permitted Use is described in Item 6.

4. When will the Consent commence?

The Consent commences on the date in Item 7.

5. When will the Consent end?

The Consent will end on the date in Item 8.

If there is no date in Item 8, the Consent will end on the earlier of the following occasions:

- a. when Council decides to revoke the Consent; or
- b. when the Applicant requests that Council revoke the Consent.

6. In which circumstances can Council revoke the Consent?

Council can revoke the Consent at any time and for any reason under section 140 of the Roads Act.

If section 140 of the Roads Act is repealed, the Consent is revoked when that repeal takes effect.

Without limiting the circumstances in which Council may revoke the Consent, Council may revoke or suspend the Consent in accordance with clauses 7-10.

7. Warning Notice

If, in Council's opinion, the Applicant is not complying with any of the terms and conditions of the Consent, Council may issue a written warning notice to the Applicant (the Warning Notice).

The Applicant must reply in writing to the Warning Notice (the Applicant's Reply), and the Applicant's Reply must be received by Council within 7 days of the date of the Warning Notice.

The Applicant's Reply must contain the following information:

- a. steps the Applicant proposes to take to meet the terms and condition of the consent as outlined in the consent and specified in the Warning Notice; or
- b. the Applicants reasons for disagreement with the Waning Notice
Council will respond to the Applicant's reply within 7 days of receipt of the Applicant's Reply (Council's Response).

Once the Applicant has received Council's Response, the Applicant must ensure all requirements in Council's Response are complied with immediately.

8. Suspension and revocation - events

Council may revoke or suspend the Consent, with or without issuing a Warning Notice, if any of the following events occurs:

- a. the Applicant does not comply with the requirements of the Consent;
- b. the Applicant's application for consent contains information that is untrue, incomplete or misleading;
- c. the Applicant does not reply to a Warning Notice in the manner required by clause 7;
- d. the Applicant's Reply does not set out the steps the Applicant will take to comply with the requirements of the Warning Notice;
- e. the Applicant does not comply with the requirements of Council's Response;
- f. the Applicant prevents or hinders, or attempts to prevent or hinder, Council from carrying out any inspections in relation to the Consent;
- g. any fees associated with the Consent are not paid by the due date;
- h. any approvals required to be obtained by the Applicant in clause 15 lapse, are not granted or are revoked; or
- i. the Applicant becomes insolvent and cannot fulfil its obligations under the Consent.

9. Suspension and revocation – the Structure

Council may suspend or revoke the Consent immediately, with or without a Warning Notice, if, in Council's opinion, the Structure:

- a. becomes unsafe; or
- b. is likely to cause environmental damage; or
- c. could harm any person or property.

10. Notice if the Consent is revoked or suspended

The Applicant may request Council to revoke the Consent, with such revocation to take effect 30 days after the date of the request.

Any request by the Applicant for Council to revoke the Consent is subject to the following conditions:

- a. the Applicant cannot request Council to revoke the Consent if the Applicant is in breach of any of the conditions of the Consent;
- b. while Council will consider any request to revoke the Consent, Council will not be bound to agree to revoke the Consent; and
- c. Council may agree to any request to revoke the Consent subject to conditions imposed by Council.

11. Notice if the Consent is revoked or suspended

If Council revokes or suspends the Consent, Council will inform the Applicant by way of written notice.

12. Effect of revocation or suspension of the Consent

If the Applicant receives a notice that Council is revoking or suspending the Consent, the Applicant must, in accordance with the notice:

In the case of suspension of the Consent:

- a. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately.

In the case of revocation of the Consent:

- b. cease the Works (if the Works are still being carried out) and the Permitted Use of the Structure immediately in the case of revocation; and either
- c. remove the Structure immediately (where the removal of the Structure does not require the consent of any authority); or
- d. immediately apply to the relevant authority for consent to remove the Structure.

If the Applicant does not comply with the terms of the notice, and remove or cease use of the Structure (as the case may be), Council may remove the Structure.

Removal of the Structure by Council does not prevent Council from taking legal action against the Applicant, including recovering any costs incurred by Council to remove the Structure.

13. No compensation if the Consent is revoked or suspended

Nothing in the Consent renders Council liable to pay any compensation to the Applicant in circumstances where Council suspends or revokes the Consent.

14. Statutory restrictions

The Consent is limited in its operation by the provisions of the Roads Act and any Regulations made under the Roads Act, and is granted subject to the provisions of the Roads Act.

15. Prior to carrying out the Works

The Applicant must, prior to carrying out the Works, obtain any necessary approvals from Council for the Works, the Structure and the Permitted Use under the Environmental Planning and Assessment Act 1979 and the Local Government Act 1993;

The Applicant must comply with all conditions imposed by any approvals of Council, the RMS, the Minister administering the Roads Act or any other authority.

The Applicant is required to give at least 7 days notice to the occupiers of properties adjoining any part of the Public Road in which the Works are to be carried out, of the intention to carry out those Works.

The Applicant must give at least 48 hours written notice to Council's Representative listed at Item 9 at the address listed at Item 10 prior to commencing the Works.

The Applicant is required to deliver to Council's Representative the insurance policy referred to in clause 21 and the bank guarantee referred to in clause 22 prior to commencing the Works, as well as copies of any approvals that the Applicant is required to obtain in respect of the Works, the Structure or the Permitted Use.

16. Condition of Site

Council gives no warranty (either present or future) as to the suitability of the Public Road or the use to which the Public Road may be put. The Applicant is deemed to have sought the Consent with full knowledge of and subject to any prohibitions or restrictions on the use of the Public Road from time to time under or in pursuance of any law.

17. Carrying out the Works

The Applicant must carry out the Works:

- a. in conformity with the description of the Works at Item 5;
- b. in accordance with the approvals listed in clause 15;
- c. to the reasonable satisfaction of Council's Representative;
- d. as expeditiously as practicable in a proper and workmanlike manner;
- e. proceed continuously with the Works until completion of the Works;
- f. with due regard to the safety and rights of the public and for that purpose comply with the requirements of:
 - 1. Council's Representative;
 - 2. the WorkCover Authority of New South Wales;
 - 3. the Department of Industrial Relations and Employment;
 - 4. the Police Service of New South Wales; and
 - 5. any other authority;
- g. in a manner that does not unreasonably interfere with the use of the Public Road or any other land by other persons while carrying out the Works;
- h. in a manner that complies with Council's policies and procedures; and
- i. between the hours of 7.00am and 6.00pm on Mondays to Fridays, between 8.00am and 4.00pm on Saturdays and at other times only if previously approved by Council's Representative in writing.

18. Amendments to the Works

If, in Council's opinion, it becomes necessary:

- a. to relocate or remove any portion of the Structure due to:
 - 1. any work in, on or over the Public Road; or
 - 2. widening or reconstruction of the Public Road which Council or any other authority wishes to carry out; or
- b. to carry out additional works to the Public Road or the Structure for the safety and protection of the public, the Applicant must, at its own cost:
- c. relocate, carry out the removal or carry out any additional work; and
- d. pay to Council any additional cost or expenditure incurred by Council by reason of the existence, relocation or removal of the Structure.

If no representative of the Applicant is present at the Works site, or if Council's Representative determines an event of emergency has occurred, Council's Representative can take any action to prevent loss of or damage to the whole or any part of the Structure, the Public Road or property adjacent to the Structure, or to prevent personal injury to any person.

In such circumstances, where Council's Representative reasonably determines that the Applicant would have been liable to take such action, the cost of Council's action must be paid by the Applicant to Council as a debt due to Council. Any such action taken by Council's Representative will not relieve the Applicant of any liability or obligation under the Consent.

19. Council's inspection

Council reserves the right to inspect the Public Road, the Structure and the Works at any time with reasonable notice and at any time in an emergency.

20. Charges

The Applicant is required to pay to Council an annual charge for the Consent in accordance with section 611 of the Local Government Act 1993 which is set out at Item 11 (the Annual Charge).

The Annual Charge must be paid prior to use of the Structure being commenced. The Annual Charge is to be paid in the manner advised by Council's Representative, as amended from time to time.

Council may amend the amount of the Annual Charge at any time.

21. Insurance and Indemnities

The Applicant indemnifies Council and keeps Council indemnified from and against all actions, claims and demands if any arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent or any damage to the Applicant's property in accordance with the Consent.

Council can pay, satisfy, defend, compromise or settle any claim arising out of the granting of the Consent or anything done or purported to be done by the Applicant under the Consent and any amount paid by Council in doing so is a debt due to Council by the Applicant and must be repaid on demand.

The Applicant indemnifies Council against any liability to pay taxes or charges payable now or in the future in respect of the Works, the Structure or the Consent.

The Applicant must obtain and keep current an insurance policy:

- a. noting Council's interest as the appropriate roads authority of the Public Road and listing Council as co-insured; and
- b. covering liability to the public for not less than the amount in Item 12 for each accident or event.

The insurance policy of the Applicant must be produced to Council's Representative prior to commencing the Works along with the receipt for the last premium. The Applicant must provide certificates of currency to Council on an annual basis while the Consent remains in force.

The Applicant must not void, reduce or cancel any insurance policy in respect of the Public Road, the Structure or the Works.

22. Bank Guarantee

Before commencing the Works, the Applicant must deliver to Council's Representative a bank guarantee to secure the satisfaction of the Applicant's obligations under the Consent (the Bank Guarantee).

The Bank Guarantee must:

- a. be in a form acceptable to Council and for an amount not less than the amount specified in Item 13; and
- b. be payable to Council at any time while the Consent is in force.

If the Applicant fails to satisfy any of its obligations under the Consent, or if Council incurs any expense under any term of the Consent, Council may call on the Bank Guarantee and remedy the Applicant's failure or reimburse Council for that expense without prejudice to any other right Council may have against the Applicant.

Council will return the Bank Guarantee, or any remainder, to the Applicant when the Applicant's obligations under the Consent have been complied with to the reasonable satisfaction of Council's Representative.

23. End of the Consent

When the Consent ends or is revoked, any part of the Structure remaining within the Public Road will be deemed to be an obstruction or encroachment under section 107 of the Roads Act.

The Applicant or any other person using or capable of using the Structure after the Consent ends will be deemed to be a person who causes an obstruction or encroachment on a public road for the purposes of section 107(1)(a) of the Roads Act.

When the Consent ends the Applicant must, in any manner directed by Council and as quickly as practicable, remove the Structure and make good any damage caused by the removal. The Applicant must also pay any outstanding fees and charges due to Council under the Consent.

If the Applicant does not remove the Structure or make good any damage caused by the removal at the expiration of the Consent, Council may undertake such actions on behalf of the Applicant and the costs incurred by Council in doing so will be a debt due from the Applicant to Council, payable on demand.

24. Resolution of disputes

Council will endeavour to resolve any disputes with the Applicant by discussing them with the Applicant. However, in the absence of agreement, Council's decision will be final. Nothing in this clause precludes the Applicant from taking legal action against Council in respect of Council's decision.

25. Notices

Any notice given under or in accordance with the Consent can be given in the manner provided in sections 254 and 255 of the Roads Act.

26. Livestock

- a. Cattle must be fenced at all times behind an electric fence with pigtail pickets rather than star pickets.
- b. Cattle must be taken off the road at night.
- c. No entire male cattle (bulls) are allowed on roadsides.
- d. No horses are allowed to feed on roadsides

27. General

Nothing contained in the Consent:

- a. prejudices or affects the rights of the public to pass along the Public Road;
- b. authorises any nuisance or permanent obstruction of the Public Road;
- c. confers on the Applicant any exclusive right or title to that part of the Structure within the boundaries of the Public Road; or
- d. in any way restricts or limits the powers of Council in respect of the Public Road.

A certificate signed by Council's Representative as to the cost of any work carried out by Council or on Council's behalf will be final and conclusive evidence of that cost.

The Applicant must pay all reasonable legal costs incurred by Council in connection with the preparation of the Consent and with remedying any breach of the requirements of the Consent.

The Applicant must comply with all laws relating to the Works, the Structure and the Public Road.

Commencement of the Works constitutes acceptance of all conditions of the Consent.

A waiver or indulgence granted by Council in respect of any non-compliance by the Applicant with the terms of the Consent does not constitute a future or past waiver of similar non-compliance. A failure to act by Council in response to any non-compliance does not constitute a waiver of such conduct.

A reference to an Item is attached in Schedule 1.

 1. The copyright of this drawing is vested in Traffic NSW PTY LTD and it may not be reproduced in whole or part or used for the installation of any facility without the express permission of the copyright holders.
 2. Any deviation from this plan can only be implemented by a TINSW accredited traffic controller with the PWZ code shown on their TCT card.
 3. Should this plan be modified or not be implemented by Traffic NSW PTY LTD, Traffic NSW cannot be held liable or responsible for any incident or damage that may arise from the new traffic guidance scheme and this plan will be considered null and void.
 4. One traffic lane to be kept available throughout the work site to allow emergency vehicle access at all times.
 5. All Stop/Slow operations must be undertaken by a TINSW accredited traffic controller with the TCR code shown on their TCT card.
 6. This plan is to be implemented by a TINSW accredited traffic controller with the IMP code shown on their TCT card.
 7. The placement of traffic signs and/or devices to control traffic must be checked on site to ensure that the plan is fit for purpose and that are clearly visible to traffic.

Project: 236_Yancoal MTW Road Closure & Traffic Management Plan
Comments:
 Work to be completed:
 Road Closure on Charlton Rd to facilitate blasting operations at Yancoal Mt Thorley Warkworth mine.
 Temporary speed zone reduction from 80kmh to 60kmh on approach to traffic control position.
 Signs to be size "B" at minimum.

Road Closure Check List

MOUNT THORLEY WARKWORTH - ROAD CLOSURE CHECKLIST

Date: Road Closure Coordinator: Blast:

Closing Road?	Road Occupancy Licence	Advertised Argus	SCC Notification	Advanced Warning Signs	Blasting Hotline	Reduced Speed Zone established	Reduced Speed Zone dis-established	Time Closed	Time Re-opened
Charlton Rd	N/A								
Putty Rd									
Gouldsville Road	N/A								
Golden Hwy									
						Yes	No	Comment	
Is the Traffic Guidance Scheme approved?								LAST CARS:	
Is the Traffic Guidance Scheme on site?									
Are all signs and devices set out as in the Traffic Guidance Scheme?									
If 'no', have modifications been approved by an authorised person?									
Are advanced warning signs used appropriately?									
Are the requirements incorporated for safe clearance to workers and traffic approach speeds?								CARS IN QUEUE	
Are all signs and devices used in a serviceable condition and fit for use?									
Are all sign faces compliant with AS1742.3?									
Are all traffic controllers trained, authorised and fit for duty?									
Do all traffic controller understand the requirements of the Traffic Management Plan?									
Are all traffic controllers able to communicate with each other and the Road Closure Coordinator?								SIC:	
Has an assessment of expected queue lengths been undertaken and documented?								Blast Fired:	
At the end of the work have all signs and devices been removed?								All Clear SIC:	
At the end of the work has the pre-existing speed limit been re-established?								All Clear Road:	
Are there any opportunities for improvements to this TMP that have been identified?								Gas Monitors:	
Are there any incidents or near-misses to report?								Sentries	

SITE SKETCH

PLEASE DRAW AND ADD NOTES ON DIAGRAM AS REQUIRED

SIGNS AND DEVICES REGISTER

All signs and devices are to conform to AS1742, and are only to be placed and removed by people trained and authorised to do so.

Traffic Control at Work Sites

**Traffic Control at Work Sites
Location Checklist**

[] PUTTY/CHARLTON
Road No: [] GOLDEN HWY Location: MOUNT THORLEY WARKWORTH
Type of Work: TEMPORARY ROAD CLOSURE FOR BLASTING

Date: Time: Completed by:

ROAD CLOSURE NOT REQUIRED - DUST DISPERSED IN PIT.

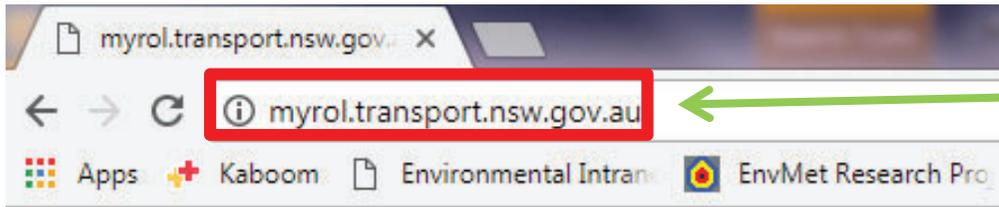

The following checklist shall be completed on site with the approved TGS for the work being undertaken, prior to TGS implementation.

1	Has provision been made for any intersections, on-loading or off-loading ramps within the worksite ?	Yes/No/NA
2	Will vehicles be entering or leaving the worksite from private or commercial driveways ? Has provision been made for those vehicles ?	Yes/No Yes/No/NA
3	Is there adequate sight distance for road users to signs and traffic controllers ?	Yes/No
4	Will control measures be safe for the approach speeds of traffic ?	Yes/No
5	Has consideration been given to traffic volumes expected ?	Yes/No
6	Has provision been made for bus stops (including school) ?	Yes/No/NA
7	Has provision been made for pedestrians including those with impairments ?	Yes/No/NA
8	Has provision been made for cyclists ?	Yes/No/NA
9	Are there any overhead power lines that might be a risk to construction vehicles and plant ?	Yes/No
10	Has the time of day been adequately considered (ie night work, low setting sun) ?	Yes/No

Item No	Action taken.

Activating ROLs Guide

- When closing Putty Road or Golden Highway for the purposes of blasting, we need to activate the relevant ROL prior to closing the road
 - Putty Road ROL# - **1863004**
 - Golden Highway ROL# - **1863010**
 - NOOP ROL# - **1863014**
 - Licences allow us to close roads between 9:00AM until 5:00PM
- This applies to
 - **Putty Road Closure**
 - **NOOP –Golden Highway**
 - **Golden Highway Road Closure**
- This **DOES NOT** apply to single Charlton Road closures
- Try and select a start time a few minutes before when you think they will close the road. Preferable to be early (up to 15 minutes), than late by a minute
- If there are multiple road closures during one day, they may be covered in the one shift.
 - Eg. Putty Road Closure at 10am (for MTO blast) and Putty Road closure at 2pm (for WML blast). Select start time based on when you think they will close the road for the 10am shot. Select end time no later than 5pm.
 - If there is a Putty Road closure and Golden Highway closure on the same day, you will need to activate both licences separately.
- If you have any concerns, call the Traffic Management Centre (TMC) – **1800 679 782**

1. Go to myrol.transport.nsw.gov.au

Shift activation request

> About you

▼ Shift location and time

Location

Subject road

PUTTY RD

From

CHARLTON RD, BULGA

To

GOLDEN HWY, MOUNT THORLEY

Actual boundaries

Select start time of road closure. Listen in on Ch. 11 to shotfirer calls to get an idea on how far off they are to closing the road. Generally, the road will only be closed once all sentries are in position and the shotfirer has called for sentries to move to Ch. 4. If in doubt, contact Road Closure Coordinator – John Hunter or equivalent on Ch. 11.

Shift Timings

Your start time

d/MM/yyyy h:mm a

Your end time

d/MM/yyyy h:mm a

Select end time when road will be re-opened. Our licence is allowed to stay open until 5pm, so leave sufficient time between start and end time in case of any substantial delays.

> Traffic Management

Request shift activation

Open "Traffic Management" tab.

Traffic Control Training Overview

Traffic Control Training

TRAINING COURSE OVERVIEW AS OF JUNE 2019

	Traffic Controller	Implement Traffic Control Plans	Prepare a Work Zone Traffic Management Plan
Description	<p>This course provides training for personnel who are required to control traffic with a Stop/Slow bat.</p> <p>This course does not qualify a participant to set up or work with traffic control plans.</p> <p>This program is a good entry point for those wishing to establish themselves into the traffic control/management industry.</p> <p>All training and assessment is carried out by RMS Approved Training Providers and qualified RMS Approved trainer/assessors.</p>	<p>This course provides training for personnel who are required to set up and work with Traffic Control Guidance Schemes/Traffic Control Plans at a work site.</p> <p>This course does not qualify a participant to control traffic with a Stop/Slow bat, or to modify existing traffic control plans.</p> <p>This program is suited to those who have Traffic Controller experience and wish to further their career within the traffic control/management industry.</p> <p>All training and assessment is carried out by RMS Approved Training Providers and qualified RMS Approved trainer/assessors.</p>	<p>This course provides training for personnel who are required to design new traffic management plans and TCGS/TCP's for road works, produce major upgrades of standard plans and/or inspect traffic control plans on road construction sites.</p> <p>This course does not qualify a participant to control traffic with a Stop/Slow bat or set up work with traffic control plans.</p> <p>This program is suited to experienced traffic control/management operators.</p> <p>All training and assessment is carried out by RMS Approved Training Providers and qualified RMS Approved trainer/assessors.</p>
Learning Outcomes	<ul style="list-style-type: none"> • Stop/direct road users using a stop/slow bat and understand stopping sight distances. • Maintain traffic incident reports. • Understand the Traffic Control Guidance Schemes (TCGSs) also known as Traffic Control Plan (TCPs) for the site. • Assess and respond to changes in the environment, for example traffic volumes, weather conditions, road conditions, Work Health and Safety (WHS) and operational requirements. • Carry out risk assessments for personal safety. • Participate in toolbox talks (specific to traffic control). • Use communication methods and devices. • Conform to traffic control policy and procedures. 	<ul style="list-style-type: none"> • Identify safety implications of traffic control at road works and personal responsibilities. • Set up, Monitor and Close down traffic control devices according to a nominated TCGS/TCP, to WHS and legislative requirements. • Operate a two-way radio correctly and effectively. • Check, clean and store equipment on completion of work and close down a TCGS/TCP. • Select a TCGS/TCP to suit site conditions, traffic volumes and work activities, and adjust to suit the specific road environment (see additional notes). • Know the basic function of the TCGS/TCP system. • Adapt to all Work Health and Safety (WHS) and operational requirements. • Use the site/location assessment, distinguish topographical landmarks and carry out authorised risk control. • Conduct an onsite check of a TCGS/TCP to identify any unexpected risks/hazards. • Plan for emergencies that may arise. • Ensure spacing between signs and traffic control devices is in line with a TCGS/TCP. 	<ul style="list-style-type: none"> • Prepare a Work Zone Traffic Management Plan (TMP). • Collect all required information about a given roadwork project to enable the preparation of a TCGS/TCP. • Design a TCGS/TCP, based on risk assessment, statutory and regulatory requirements, standards, road authority requirements and project brief. • Select and modify a TCGS/TCP based on risk assessment, statutory and regulatory requirements, standards, road authority requirements and project brief. • Draw up a TCGS/TCP to recognise other graphical representations such as pedestrian movement plans, vehicle movement plans, and notification of authorities. • Determine the recommended spacing between signs and traffic control devices in line with standards; measure width of trafficable surface; calculate edge clearances to barriers, cones and clearance to work personnel. • Incorporate Environmental Management Plans. • Conduct an onsite check and inspection of the plan and to identify any unexpected hazards/risks. • Identify approvals required; identify approval agencies, types of approvals for roadway access, railway reserve access, authority to install signs on roads, variation to standards.

		<ul style="list-style-type: none"> • Understand speed, environment, type and class of vehicles, traffic density, sight lines, environmental conditions, weather patterns and surface type. • Maintain traffic incident reports. • Monitor traffic controllers. 	<ul style="list-style-type: none"> • Understand speed, environment, type and class of vehicles, traffic density, sight lines, environmental condition, weather patterns and surface type. • Monitor and interpret control systems to apply to the drawing, selection and design. • Use approved methods and follow recognised local legislation. • Use the site/location assessment, distinguish topographical landmarks and carry out authorised risk control. • Collate traffic volume data, type and class of vehicles. • Determine lane capacity, road network performance and lane closure restrictions. • Identify impacts from any concurrent or adjacent works. • Identify times and dates of any planned public events that may result in increased or redistributed traffic patterns. • Identify affected stakeholders and type of notification required and prepare notifications. • Calculate costings for TMP development and implementation.
Units of Competency	RIIWHS201D Work safely and follow WHS policies and work procedures RIICOM201D Communicate in the workplace RIIWHWS205D Control traffic with a stop/slow bat	RIIWHS201D Work safely and follow WHS policies and work procedures RIICOM201D Communicate in the workplace RIIWHWS302D Implement traffic management plan	RIIWHS201D Work safely and follow WHS policies and work procedures RIIRIS301D Apply risk management processes RIIGOV401D Apply, monitor and report on compliance systems RIICWD503D Prepare work zone traffic management plan
Recommended Target Audience	<ul style="list-style-type: none"> • Field Staff 	<ul style="list-style-type: none"> • Field Staff • Team leaders 	<ul style="list-style-type: none"> • Works Supervisors • Surveillance Officers • Road Safety Auditors • Project Managers
Course pre Requisites	Currently there are no pre requisites.	Currently there are no pre requisites. It is recommended that you have experience in Traffic Control.	There are no training package pre-requisites for these units of competency, although RMS has set minimum course pre requisites to obtain a photocard in NSW, see below Participants who hold one of the following <ul style="list-style-type: none"> • Current 'Implement Traffic Control Plans' photocard (full qualification) • Current 'Prepare a Work Zone Traffic Management Plans' photocard (full qualification) • Equivalent qualifications from other jurisdictions Or For those who do not hold formal Traffic Control/Management qualifications such as engineers and project managers and they wish to complete the course, they will be eligible if, they hold a tertiary qualification that is relative to the road construction, civil construction or engineering. This must be determined upon enrolment and a thorough training needs analysis (TNA) is required.

Course Timing	Generally course timing will be based on the individual and or group. 1 (one) full day of training is a minimum for new entrants into the industry who have never held this qualification, to include classroom theory and simulated practical training.	Generally course timing will be based on the individual and or group. 1 (one) full day of training is a minimum for those who have never undertaken these activities prior and have never held this qualification, to include classroom theory and simulated practical training.	Generally course timing will be based on the individual and or group, although RMS stipulates a minimum of 3 (three) full days of training (excludes additional time for post work project assessments).
Training	Training will include; <ul style="list-style-type: none"> • Classroom activities • Theory questionnaires and group activities • Minimum practical traffic control simulation using full scale devices and vehicles in controlled and safe environments 	Training will include; <ul style="list-style-type: none"> • Classroom activities • Theory questionnaires and group activities • Minimum practical implementation, monitoring and removing TCGS/TCP's simulation using full scale devices and vehicles in controlled and safe environments 	Training will include <ul style="list-style-type: none"> • Classroom activities • Theory questionnaires and group activities. • Use of regulatory and statutory manuals and documents • Project management that includes case studies and document preparation • Use of TCP/TCGS development software
Assessment Requirements	Assessments are to be completed as per the RII Resources and Infrastructure training package requirements, whereby all units of competency must be assessed on the job on a minimum of 2 (two) separate occasions (in the context of traffic control at worksites). Assessments will include: <ul style="list-style-type: none"> • Theory questionnaires and activities • On the job practical application and observation (by an RMS approved trainer/assessor) • Provision of workplace samples and documentation 	Assessments are to be completed as per the RII Resources and Infrastructure training package requirements, whereby all units of competency must be assessed on the job via 3 (three) separate live projects (in the context of traffic control at worksites). Assessments will include: <ul style="list-style-type: none"> • Theory questionnaires and activities • On the job practical application and observation (by an RMS approved trainer/assessor) • Provision of workplace samples and documentation 	Assessments are to be completed as per the RII Resources and Infrastructure training package requirements, whereby all units of competency must be assessed by qualified assessors (in the context of traffic control at worksites). Assessments will include: <ul style="list-style-type: none"> • Theory questionnaires and activities • Practical activities and observation (by an RMS approved trainer/assessor) • Development of TCGS/TCP's • Development of 2 (two) Traffic Management Plan projects • Provision of workplace samples and documentation
Language Literacy and Numeracy (LLN)	Language, Literacy and Numeracy levels have been mapped for each course in an effort to demonstrate the minimum levels that are required to complete training. In addition the mapping exercise also identifies levels that may be required in the workplace, below is a sample of LLN levels. LLN level equal to or above the following: READING: Level 2 Ability to read appropriate signage for the tasks required and understands clear consistent formats that are written in simple sentences. Interpret instructions and information from notices, forms and other forms of written instructions. WRITING: Level 2 Writes short texts with simple structures. Fills in details on simple forms and can complete workplace checklists. Records simple and routine information.	Language, Literacy and Numeracy levels have been mapped for each course in an effort to demonstrate the minimum levels that are required to complete training. In addition the mapping exercise also identifies levels that may be required in the workplace, below is a sample of LLN levels. LLN level equal to or above the following: READING: Level 2-3 Ability to read appropriate signage for the tasks required and can read and interpret traffic control plans that include specialised symbols. WRITING: Level 2-3 Writes clear sequenced instructions for using routine/everyday activities. Records simple and routine information from a telephone message. Can write tasks to be completed by other staff.	Language, Literacy and Numeracy levels have been mapped for each course in an effort to demonstrate the minimum levels that are required to complete training. In addition the mapping exercise also identifies levels that may be required in the workplace, below is a sample of LLN levels. LLN level equal to or above the following: READING: Level 4-5 Ability to read and understand highly complex information and can reflect on the explicit and implied purpose of the text and its potential impact. Reviews relevant national, state and local legislation and regulations relevant to the job role. Identifies and extracts relevant information from complex diagrams, graphs and charts. Identifies critical information from a plan and can translate and convey concepts and ideas. Analyses and evaluates the validity of information sources and make recommendations.

	<p>ORAL COMMUNICATION: Level 2 Asks simple questions and makes statements with reasonable effectiveness where this involves short utterances and highly familiar content. Can use a range of nonverbal communication support such as gestures and facial expressions to express meaning. Can describe a routine task, using workplace specific vocabulary as appropriate supported by body language. Communicates using radio equipment, e.g. to report to base on a location or field emergency.</p> <p>NUMERACY: Level 2 Locates and recognises simple, everyday mathematical information in highly familiar short and simple oral and or written materials. Ability to calculate braking distances and speed of oncoming traffic Follows simple instructions and can measure content, time and distance.</p>	<p>Completes a range of forms requiring routine and factual data, e/g/ WHS records, inspection reports and checklists.</p> <p>ORAL COMMUNICATION: Level 2-3 Demonstrates language use appropriate to some different interactional purposes, e.g. gives and opinion or explanation, makes and enquiry or seeks clarification. Can identify key information relevant to an exchange. Can explain routine procedures and give clear sequenced instructions to others. Follows directions to perform a sequence of tasks and listens for specific information in a formal workplace meeting. Asks questions to clarify and confirm instructions. Listens to clear, sequenced instructions of several steps and asks clarifying questions as required. Communicates using radio equipment, e.g. to report to base on a location or field emergency.</p> <p>NUMERACY: Level 2-3 Interprets and comprehends a range of everyday mathematical information that is embedded in familiar and routine texts. Can interpret and familiar and routine maps and plans. Uses appropriate technological devices to measure, estimate and calculate length/distance. Selects and uses appropriate tools and hand held device. e.g. uses tape measure to measure. Problem solving processes using developing estimation, and other assessment skills. Ability to calculate braking distances and speed of oncoming traffic.</p>	<p>Understands specialised vocabulary and acronyms relevant to own fields of expertise and interest. WRITING: Level 4-5 Ability to write and organise content in a manner that supports the purposes and format of what is required. Can demonstrate sophisticated control of a broad range of text types. Writes a technical/design brief or a complex work instruction based on client or stakeholder requirement. Prepares data for team or stakeholder using graphs. Writes clear and detailed instructions organised sequentially to be completed. Compiles reports with input from a range of sources. Understands and uses appropriate specialised vocabulary in a variety of situations.</p> <p>ORAL COMMUNICATION: Level 4-5 Engages in complex oral negotiations, such as exploring issues, problem solving, reconciling points of view or bargaining. Determines clients or stakeholder requirements to inform a design or technical brief. Actively participates in workplace meetings. Listens to a set of instructions detailing changes to work processes and notes key changes and the reasons for the changes. Sequences complex technical instructions to ensure understanding, including pitfalls to be avoided when training others to use equipment. Interacts effectively with members of the public to identify and remedy problems.</p> <p>NUMERACY: Level 4-5 Ability to draw upon mathematical knowledge and experience, diagrammatic, symbolic and other mathematical processes. Can extract, interpret and comprehend detailed maps and plans. Uses and applies relevant ratio, rates and proportions e.g. scales on maps and plans. Uses developed estimating and assessment skills to check the outcomes and decide on the appropriate degree of accuracy required. Selects and flexibly uses a range of specialised tools, hand held devices, computers and technological processes.</p> <p>LEARNING: Level 4-5 Ability to draw selectively on experience to adapt past learning to new circumstances. Draws on a repertoire of strategies to clarify and extend understanding. Develops and trials own approaches to a task when templates and guides are not available.</p>
--	---	---	--

			<p>Actively seeks feedback from others as a way of improving performance, e.g. approaches peers, manager or customers.</p> <p>Attempts complex tasks/activities requiring sophisticated conceptualisation and analysis that may be carried out over an extended period of time, e.g. major projects requiring research and recommendations.</p> <p>Draws on prior knowledge to assess, and where required renegotiate, the nature and scope of what has to be done.</p> <p>Develops a brief for a complex project that includes several staff with different skills.</p> <p>Uses software options to organise and present complex information.</p> <p>Uses highly developed formatting, drafting and editing skills to refine thinking and clarify a message for others.</p>
--	--	--	--

Additional Notes

Implement Traffic Control Plans

RMS has recently added the following task to this qualification

'Select traffic guidance scheme to suit site conditions, traffic volumes and work activities'

This is based on the performance criteria 2.1 from the RIIWHS302A unit of competency

There are strict provisions placed on this ability, see below

Minimum Conditions

- Must be selected from approved TCP/TCGS signed off by qualified persons (persons who hold a current *Prepare a Work Zone Traffic Management Plan*)
- Blank TCP/TCGS cannot be selected from the TCAWS manual and used (unless approved and signed off by qualified persons)
- Approved TCP/TCGS must be current (within the past 6-12months)
- No modifications can be made by the implementer (modifications can only be completed by a qualified person)
- Implementers will be able to make minor adjustments as per AS1742.3 Cl 4.1.6 and Traffic Control at Worksites manual section 3.5.8 '***Tolerances on positioning signs and devices'***
- A risk assessment must be undertaken on each occasion as per general standards
- This change can only be applied for qualifications achieved post 1/7/2015
- Holders of the old 'Apply Traffic Control Plans' who wish to be able to undertake this additional task will need to upgrade to the new 'Implement Traffic Control Plans' qualification

Appendix E – Blast Monitoring Programme

Mt Thorley Warkworth Blast Monitoring Programme

1 Purpose

This document provides a summary of the blast monitoring programme for Mount Thorley Warkworth, the monitoring locations are subject to change and will be updated periodically to align with management and compliance needs and to accommodate progression of mining and changes to local landholdings.

2 Programme

MTW maintains a network of Kaboom blast monitors located at offsite locations representative of privately-owned land (detailed below).

Parameter	Frequency	Monitor Location	Limit/Guideline	Sampling Method
Airblast Overpressure	All blasts	Abbey Green Bulga Village Putty Road - MTIE Warkworth* Wambo Road Wollemi Peak Road	>115 dB (Lin Peak) (5% of blasts over 12 months) >120 dB (Lin Peak) (no allowable exceedance at any time at residences on privately owned land)	Blast Monitor AS2187.2-2006
Ground Vibration	All blasts	Abbey Green Bulga Village Putty Road - MTIE Warkworth Wambo Road Wollemi Peak Road	>5 mm/s (ppv) (5% of blasts over 12 months) >10 mm/s (ppv) (no allowable exceedance at any time)	Blast Monitor AS2187.2-2006

*Note: There are no privately owned residences in Warkworth. The nearest privately owned residence to Warkworth is Knodlers Lane, Maison Dieu. If Airblast Overpressure (AOP) >120 dB is recorded at the Warkworth blast monitor, data from the HVO Knodlers Lane blast monitor will be reviewed to assess AOP compliance at that location.

Figure E1: Blast Monitoring Location Plan

Protocol for Evaluating Compliance

1 Purpose

The following sections of this monitoring programme outlines the key considerations in evaluating compliance with the blasting impact assessment criteria.

Measures to reduce fume emissions from the site are detailed in the Post Fume Generation Mitigation and Management Plan, Appendix C of the MTW Blast Management Plan

2 Blast descriptors & measurement

Ground Vibration

When an explosive detonates, it creates a compression wave that spherically radiates out into the rock mass. When used in a mining context, the compression wave, in conjunction with several other factors, fragments the rock mass while the high pressure gases fluidize and heave the rock mass to its final resting place ready for excavation by mining equipment.

The ground vibration resulting from the blast has components in 3 planes – longitudinal (L), transverse (T) and vertical (V). The vibration waves in these planes are termed the Compression wave, Horizontal Shear wave and Vertical Shear wave respectively

The velocities in each plane are combined mathematically to produce a single term that represents the total ground velocity. This term is known as the 'Peak Particle Velocity' 'PPV' or 'Resultant'. PPV is measured in millimetres per second.

The PPV measure of blast induced ground vibration is universally used in the context of measurement, reporting, and compliance. The Resultant measure is expressed in millimetres per second.

Airblast

Airblast is an airborne shock wave resulting from the detonation of explosives. It may be caused by burden movement or the release of expanding gas into the air. Airblast may or may not be audible. Airblast can contain frequencies from below 2Hz to beyond 20KHz. Frequencies above approximately 20Hz are audible whilst those below 20 Hz are sub-audible. Generally, it is the sub-audible component of the airblast that causes effects such as rattling of windows, and shaking of ornaments on shelves.

Air Overpressure

Air overpressure is the pressure in excess (either above or below) of ambient atmospheric pressure that occurs when an air blast wave passes a given position. The maximum excess pressure is known as the peak overpressure.

Noise and air overpressure results are both measured in decibels (dB). However there is no frequency weighting applied to air overpressure measurements, which allows for assessment of the response of structures to air overpressure. Air overpressure is therefore measured in the linear weighting expressed as dB(L).

When air overpressure is presented graphically as a function of time, it is usual to present it in terms of absolute pressure or Pascals (Pa) rather than dB(L) because the physical dynamics of the air overpressure is more readily apparent when presented on a linear (Pa) rather than a logarithmic (dB) scale.

3 Monitoring

Blast monitoring is conducted at 6 locations around MTW as shown in **Figure 1** – Blast Monitoring Locations. Whilst not part of the MTW operated Blast Monitoring network, blast monitoring data is also available upon request from the HVO Knodlers Lane blast monitor, shown in **Figure 1**. Monitoring is undertaken in accordance with Australian Standard AS2187.2:2006. Real-time meteorological data will be collected in relation to blast monitoring data. This information shall include wind speed, direction and temperature inversion conditions (where applicable at the site).

Air overpressure and vibration associated with blasting shall be recorded for each blast. Monitoring data shall be reviewed by the Drill and Blast Engineer as soon as practicable after each blast to confirm correct data capture and verify compliance with airblast overpressure and ground vibration criteria. At the “Warkworth” blast monitoring location, there are no residences on privately owned land in this area. Monitoring data from the Warkworth monitor will be used in a screening process, where airblast overpressure >120 dB at this location will trigger review of data from the HVO Knodlers Lane blast monitor (representative of next nearest residences on privately owned land to the north) to verify compliance with airblast overpressure criteria.

Any blast exceeding the impact assessment criteria shall be referred for additional analysis and interpretation by an external specialist in blast consulting where the reason for the levels cannot be established by the Drill & Blast Engineer. An external report shall be issued as soon as practicable. This investigation will review blast monitoring results, blast parameters, location and prevailing weather conditions. The investigation analysis is specific to each individual exceedance but may include wavetrace inspection, wavefront pattern analysis, regression analysis, meteorological effect analysis etc. The results of any blast exceeding the impact assessment criteria (0% Criteria) will be reported to the Secretary as soon as practicable following confirmation of exceedance.

Where an investigation determines a measured result to be incorrect (wind affected, or not related to the blast event), an estimated result will be reported in place of the incorrect measurement.

4 Reporting

Outcomes of Blast Monitoring will be reported as follows:

- Regular updates (monthly) in accordance with the reporting requirements of the POEO Act;
 - By the end of March each year, in the Annual Review;
 - To relevant residents, by exception, in the event of exceedance; and
 - To the Planning Secretary and EPA, by exception, in the event of exceedance.
-

MOUNT THORLEY / WARKWORTH

BLAST IMPACT ASSESSMENT OF THE WARKWORTH EXTENSION PROJECT ON WAMBO HOMESTEAD, ST. PHILLIPS CHURCH AND BULGA BRIDGE

REPORT NO. MT-1247-270612

1. INTRODUCTION

Enviro Strata Consulting (ESC) was requested by Mount Thorley Warkworth (MTW) to undertake an independent assessment of the Warkworth Extension Project and its impact on the Wambo Homestead, St Phillips Church and Bulga Bridge (the Historical Structures). The purpose of this assessment is to support the monitoring program required to be implemented in accordance with Schedule 3, condition 20(e) of the Project Approval PA 09_0202 granted for the Warkworth Extension Project (the Project) on 3 February 2012 (the Project Approval) to ensure these Historical Structures are not damaged by blasting on the MTW mine site.

The Project will mine west of the current MTW operations. The distance between the open cut blasting of the Project and location of the Historical Structures will be reduced.

This report addresses the following issues:

- Estimation of potential vibration exposure for the Historical Structures;
- Risks to the Historical Structures associated with blast exposure from the Project; and
- Recommendations for risk mitigation (if risks are identified).

The report is based on information provided by MTW including blasting plans, blasting details and related consultants' reports on blasting, and a site visit undertaken on 22 May 2012 by the author.

2. PROJECT METHODOLOGY

MTW has been granted the Project Approval which permits, among other things, the extension of current mining operations at Warkworth Mining Limited to the west (see **Figures 1A-B** which show MTW's expected progression for years 9 and 21). As part of the Project Approval Schedule 3, condition 12(a) requires MTW to ensure that blasting on site does not damage the Historical Structures.

In considering the blasting risks the assessment undertaken takes into account:

- existing vibration limits, specific to each piece of infrastructure;
- the Project boundary; and
- blast design parameters which will be used during the Project's lifetime.

The vibration modelling presented below numerically quantifies the possible impact of vibrations on each of the Historical Structures in years 9 and 21 of the Project.

3. SITE DESCRIPTIONS AND VIBRATION LIMITS

3.1 Site Descriptions

A visit to the three sites on which the Historical Structures are located was undertaken by ESC's principal consultant on 22 May 2012 and included a visual overview of each of the Historical Structures supported by a photographic record.

The locations of the Historical Structures visited are shown in **Figures 1A-B** with the current and future (years 9 and 21) mining operations of MTW overlaid.

Presented below is a short description of each of the Historical Structures. The descriptions are based on the information gained from the internet search, see References section for details.

WAMBO HOMESTEAD

Wambo Homestead consists of eight buildings which were constructed between 1833 and 1900 (refer to **Appendix 1** for images of the Wambo Homestead). Since 1969 the homestead has been owned by local mining companies. Due to substantial mining in the area the homestead has become isolated and public access to it is limited.

Wambo Coal Mine, which is the closest mine to the Wambo Homestead has approval to operate until 2025. Due to weather and termites the conditions of the buildings have deteriorated. The buildings have been vacant for over a decade.

In July 1996 the Wambo Homestead and outbuildings were classified as heritage items of State significance under the *Singleton Local Environment Plan 1996* (NSW). In

April 1999 the Wambo Homestead was also listed on the State Heritage Register (established under the *Heritage Act 1977* (NSW)). This listing means that any works to the buildings or within the curtilage of the Wambo Homestead will require the approval of the NSW Heritage Council.

An inspection of the Wambo Homestead was carried out by Godden Mackay Logan Heritage Consultants in July 2010. The findings of that inspection are set out in the report titled 'Wambo Homestead Complex; Heritage Strategy' and dated September 2010. A summary of the description of the Wambo Homestead, as per that report, is set out below.

Slab Horse Boxes ('The Stallions' Box') -

- *Age* – built between 1900 and 1906.
- *Structure* – pole framed with timber slab walls and corrugated iron roof over timber shingles. The building relies only on its frame and the fixing and bolting for its structure.
- *Condition* – this building stands in good condition considering its age. No damage to the structure or slab is evident. Damage to the roof shingles indicates possible termite presence (in the roof shingles only). Some deterioration is expected in the post bases and wall slabs due to the posts being buried in damp earth. Due to Corrosion, the water tank is fragile with the base having collapsed. The concrete slab on which the water tank sits is broken and cracked.

Carriage House with Stables and Granary -

- *Age* – established in 1840.
- *Structure* – a one and a half story building. The building stands pole framed with a timber slab and weatherboard walls. There is no bracing to the corrugated iron roof over timber shingles. The structure relies on the frame and rigid fixings.
- *Condition* – this building has suffered from tree and weed growths along with severe termite activity which has damaged the building and caused structural movement.

Butcher's Hut -

- *Age* – built in 1901.
- *Structure* – a pole framed, double timber slab with walls. Rammed earth insulation in the walls and ceiling. Ventilated, with open gables in the corrugated iron roof.
- *Condition* – there is no evidence of termite or structural damage and the building stands in good-fair condition. Due to vegetation growth there has been some break down to fixings and with no diagonal bracing, the building is separating.

The Servants' Wing -

- *Age* – built in 1844.
- *Structure* – a brick, one and a half storey structure with a corrugated iron roof over timber shingles. Log joists are in the attic and ground floor.

- *Condition* – the Servants’ Wing is in poor condition. Due to the disintegration of both verandas there is no shelter to walls and adjacent ground. Roofing has collapsed into the attic rooms, leaving the north gable without support. There is no stair access to the attic. The rendering to walls stands one metre above ground level. The mortar has dissipated and brick erosion is intermittent. Brickwork has collapsed due to the loss of soft lime/mud mortar. Walls are in danger of collapse as they have been weakened by cracks and deformation of the building’s foundation. The internal walls have upheld damage to half their thickness. Collapsed brickwork to timber joinery is evident in the West facing windows.

The Kitchen Wing (former House) –

- *Age* – built in the years 1830, 1837 and 1906.
- *Structure* – stands two storeys, is made from sandstone brick and a corrugated iron roof over timber shingles and includes a part basement.
- *Condition* – the flooring is unsafe and there is major deterioration due to termites.

The New House –

- *Age* – built in 1847
- *Structure* – single storey rendered brick with a corrugated iron roof over timber shingles.
- *Condition* – due to termite activity there is increasing deterioration combined with moisture impediment.

The Stud Master’s Cottage –

- *Age* – built in 1837.
- *Structure* – single storey brick with a corrugated iron roof on timber shingles.
- *Condition* – overall this structure is in very poor condition with no roof. The top of the building is currently covered in tarpaulins. Debris and slabs surround the area and all windows are boarded. Old render repairs have increased the deterioration to the brickwork.

Mounting Yard, Horse Boxes and Stock Yards –

- *Age* – established in 1906
- *Structure* – a pole framed building with splayed weatherboard walls and a corrugated iron roof.
- *Condition* – this building faces extensive fabric loss with a large unbraced section of the roof facing collapse.

In summary the Wambo Homestead represents a historic structure in the area of the Project. As it will be explained later in this report the Project will be a substantial distance away, in excess of 3000 metres, from the Wambo Homestead.

The adjacent Wambo Coal Mine operates on the basis of a 5 mm/s vibration limit with some blasts undertaken within 550 metres of the Wambo homestead (using a 15 metre bench). A comparison of the distances from the Wambo homestead to the Project and to the Wambo Coal Mine shows a considerable difference. Therefore accounting for the distance difference and the vibration limit, it can be expected that the blast impacts will be relatively low and limited. More detail in regards to the possible blasting impacts will be further discussed in the vibration modelling section.

St PHILLIPS CHURCH, WARKWORTH

The St Phillips Anglican Church was consecrated in 1856. The building is not on the State Heritage Register but is a heritage item classified as being of regional significance under the *Singleton Local Environment Plan 1996* (NSW).

The two most elevated parts of the structure include a bell tower and cross. Adjacent to the church there is an old cemetery (see **Appendix 2**).

Over the years the building has been refurbished. For example,

- the original shingle roof was replaced by a galvanized iron roof about 40 years after its construction,
- in 1955, the original brick work was covered with a cement coating fashioned to resemble stone blocks after the church and graveyard experienced extensive damage due to floodwaters with repair work being carried out by local parishioners,
- in 1980 the church was painted and renovated by the local coal mines
- between 1998 and 2002 the church was furnished with new carpet, sanctuary windows depicting a native bush theme were installed and native trees and bushes were planted, and
- in 2005 the United Collieries' donation was used to replace the roof and guttering.

St Phillips Church, with the original locally cut cedar pews, is still in use today.

In summary, St Phillips Church is a 150 year old building classified as a historic item being of regional significance. The main building materials are bricks and colorbond roofing. The building will be approximately 2190 metres from the final stage of the Project.

BULGA BRIDGE OVER WOLLOMBI BROOK

The Bulga Bridge, completed in 1912, is listed on the NSW State Heritage Register.

The bridge is a Dare type timber truss bridge and spans an overall length of 129.2m. The structure comprises two timber truss spans, each of 32.0 m, and three timber approach spans at one end and two at the opposite. Sheeted timber trestles support the super structure with a carriage way, with a minimum width of 5.5 m. A timber post and

rail guard extends the full length of the bridge. The bridge, in particular the large supporting trestles, is representative of the technical developments that were made in timber truss design by the Public Works Department. The trussed cross girders are a rare feature. In the context of its landscape it is visually attractive. As such, the bridge has moderate aesthetic significance.

The bridge has undergone some structural changes in recent years including the addition of steel tension ties in the underside of the bridge deck (see **Appendix 3** showing additional bridge reinforcements) but it remains on the State Heritage Register because of its age and method of construction.

3.2 Vibration Limits for the Historical Structures

The vibration limits currently used by other open cut mining operations, applicable to each of the Historical Structures are as follows:

- **Wambo Homestead** – Wambo Mine, immediately adjacent to the Wambo Homestead operates using a 5 mm/s vibration limit. The vibration limit of 5 mm/s is considered appropriate for the Project.
- **St Phillips Church** – Hunter Valley Operations (HVO) is one of the closest open cut coal operations to St Phillips Church. HVO operates using a 5 mm/s vibration limit (see **Appendix 4**). The same vibration limit of 5 mm/s (for St Phillips Church) is appropriate for the Project.
- **Bulga Bridge** – Bulga Bridge is defined as public infrastructure as per the Warkworth Mining Limited’s Project Approval 09_0202, Schedule 1, which is defined as “*Linear and related infrastructure that provides services to the general public such as roads, railways, water supply, drainage, sewerage, gas supply, electricity, telephone, telecommunications, etc*” meaning the criteria of 50mm/s from Schedule 3 of the Project Approval would protect the Bulga Bridge.

Immediately adjacent to Bulga Bridge is the community of Bulga village. The relevant vibration limits for residences on privately owned land in the village of Bulga are 5 mm/s (applicable to 95% of blasts over a period of 12 months) and 10 mm/s (not to be exceeded). As some of the residences are within a few hundred metres of the bridge structure it is unlikely that the level of 50 mm/s for the Bulga Bridge will ever be reached

The vibration limits and estimated minimum distances from the Project’s proposed final pit wall (for years 9 and 21 of the operation) for each of the Historical Structures are presented in **Table 1** below.

Table 1: Vibration Limits and Minimum Distance Estimations from Critical Points

Location	Easting (m)	Northing (m)	Vibration Limit (mm/s)	Year 9 Min. Distance (m)	Year 21 Min. Distance (m)	Direction from Warkworth Extension
Wambo Homestead	311622	6393138	5	4393	3082	North-West
St Philips Church	314870	6394214	5	2390	2190	North
Bulga Bridge	314409	6385656	50	3645	2485	South-West

4. VIBRATION MODELLING

The aim of this section is to provide an indication of the vibration impact of the proposed mining activities of the Project on the Historical Structures.

The vibration predictive model used in this report is based on the previously compiled model generated for MTW. The model is based on the vibration monitoring stations located in the vicinity of Bulga village. The model is considered to be representative for the location of the Historical Structures. It should be noted that the model does not account for a possibility of the wavefront reinforcement occurring.

The site law formula is specified as follows:

$$V = k \left(\frac{D}{\sqrt{m}} \right)^a$$

Where:

- V** = Peak Particle Velocity (mm/s)
- D** = Distance from blast (m)
- m** = Charge mass per delay (kg)
- a** = Site exponent
- k** = Site constant

The model is based on the actual surface vibration measurements from various Mt Thorley blasts, and details were presented in the internal report (Terrock's Report 2000), see **Appendices 5A** and **B**. The parameters summarising the site law analysis (governing ground vibration behaviour) are specified as follows:

$$V = 1720 \left(\frac{D}{\sqrt{m}} \right)^{-1.6}$$

Where:

- a** = -1.6 (Site exponent)
- k** = 1720 (Site constant)

It should be noted that the model is based on the outer data envelope, representing the “worst case scenario” (that is, based on the highest measured value).

The long term plans for the Project which were provided include snapshots of the mine extension as predicted for years 9 and 21 and show the final pit boundaries. The proposed bench sizes were reviewed to provide an indication of the thickness of the material to be blasted. The data is presented in **Table 3**. There is substantial variability in the bench heights. Three bench heights were selected to represent the range. 15, 40 and 62 metre benches were considered - 62 metres represents the maximum bench height.

MTW uses various blasting products. For the purpose of this report two products, one for dry (ANFO) and one for wet (Heavy ANFO) conditions, have been analysed. Six different options have therefore been considered.

The results of the modelling are presented as a series of overlying contour lines on the mining plans. Up to 9 main contours of interest were drawn for each case, including the following vibration values 0.8, 1, 1.5, 2, 3, 4, 5, 6 and 10 mm/s.

The vibration modelling for Year 21 mine expansion plans (using Heavy ANFO and worst case scenario) are shown in **Figures 2A-C**. The vibration modelling undertaken indicates the potential vibration exposure for the sites of the Historical Structures which are marked in these modelling diagrams.

The contour lines represent the extreme cases, that is, initiation of the maximum charge mass (three different cases) from the edge of the pit shell in each case (i.e. for the final pit shell for Year 21). In this instance, each contour is drawn from the edge of the proposed final pit shell.

The results of the vibration modelling for the Historical Structures are summarised in **Table 4**. Table 4 shows the maximum predicted vibration for each of the Historical Structures, depending on the bench size and blasting product used. Table 4 also highlights the blast impacts according to the Project's mine expansion plans provided for years 9 and 22.

It should be noted that below is an approximation and the results given as per the output of the modelling. Due to low vibration levels estimated, the values are presented in a one decimal place format.

Table 4: Maximum Ground Vibration Estimates for Each Place of Concern

Infrastructure	Min. Distance (m)	Estimated Max Ground Vibration (mm/s)					
		15 m Bench		40 m Bench		62 m Bench	
		ANFO 481 kg	Heavy ANFO 722 kg	ANFO 1626 kg	Heavy ANFO 2439 kg	ANFO 2565 kg	Heavy ANFO 3848 kg
<u>Year 9</u>							
Wambo Homestead	4393	0.4	0.5	1.0	1.3	1.4	1.9
St Philips Church	2390	1.0	1.3	2.5	3.5	3.6	5.0
Bulga Bridge	3645	0.5	0.7	1.3	1.8	1.8	2.5
<u>Year 21</u>							
Wambo Homestead	3082	0.6	0.9	1.7	2.3	2.4	3.3
St Philips Church	2190	1.1	1.5	2.9	4.0	4.2	5.7
Bulga Bridge	2485	0.9	1.2	2.4	4.1	3.4	4.7

The results of the vibration modelling are summarised as follows:

- for the 15 metre bench size
 - using Year 9 pit contours the predicted vibrations are in the order of 0.4 – 1.3 mm/s
 - using Year 21 pit contours the predicted vibrations are in the order of 0.6 – 1.5 mm/s
- for the 40 metre bench size
 - using Year 9 pit contours the predicted vibrations are in the order of 1.0 – 3.5 mm/s
 - using Year 21 pit contours the predicted vibrations are in the order of 1.7 – 4.1 mm/s
- for the 62 metre bench size
 - using Year 9 pit contours the predicted vibrations are in the order of 1.4 – 5.0 mm/s
 - using Year 21 pit contours the predicted vibrations are in the order of 2.4 – 5.7 mm/s

These results show that low vibration levels are expected for all three sites of Historical Structures when using 15 or 40 metre bench size. Such vibration exposure is within the imposed limits and is too low to produce damage to any of the Historical Structures.

The maximum 62 metre bench simulation generates higher vibration levels; borderline or exceeding the 5 mm/s limit. Therefore, to comply with the vibration limits to ensure

safety of the Historical Structures, in particular St Phillips Church, some control measures, such as deck charges or smaller bench heights will be required.

The modelling undertaken is conservative and provides the worst case scenario. As the MTW mine progresses to the West, smaller explosive charges (i.e. deck charges) or smaller bench sizes will be required to reduce the charge mass to ensure the 5 mm/s vibration limit imposed for the Bulga and Warkworth village residences are not exceeded.

5. CONCLUSIONS AND RECOMMENDATIONS

At the request of MTW an assessment of the impact of blasting from the Project on the Historical Structures was undertaken. The assessment was requested as part of the requirement under the Project Approval to include a Blast Management Plan which incorporates a monitoring program for evaluating the performance of the Project, including any blasting impacts on the Historical Structures (see Schedule 3, Condition 20 (e) of the Project Approval). The three Historical Structures, Wambo Homestead, St Phillips Church and Bulga Bridge, were assessed in terms of potential vibration impact.

The study has been supported by a review of relevant documentation, including existing vibration limits, proposed extraction plans, blast design details and a site visit undertaken on 22 May 2012 by ESC's principal consultant.

Based on the results of this assessment the following conclusions were reached:

- The vibration limits were identified as 5 mm/s for the Wambo Homestead and St Phillips Church and 50 mm/s for the Bulga Bridge
- The major risk identified is vibration exposure and related damage. The risk is dependent upon the charge mass and distance from the blasting area. The assessment included detailed blast impact analyses and vibration modelling using various blasting scenarios.
- The minimum distances from each of the Historical Structures to the final pit wall (Year 21) were estimated as follows:
 - Warkworth Homestead – 3082 metres,
 - St. Phillips Church – 2190 metres, and
 - Bulga Bridge – 2485 metres.
- The 15 metre bench vibration simulation predicted vibration levels in the order of 0.4 – 1.3 mm/s for Year 9 and 0.6 - 1.5 mm/s for the Year 21 pit boundaries. Lower vibration levels are expected if smaller than 15 metre benches are used. There would be no risk of damage related to such vibration exposure for any of the Historical Structures.

- The 40 metre bench vibration modelling indicated the maximum estimated vibration impact for the Historical Structures is in the order of 1.0 – 3.5 mm/s and 1.7 – 4.1 mm/s for year 9 and 21 pit boundaries respectively. Similar to the 15 metre bench, the vibration simulations for blasting with a 40 metre bench height revealed that there are no risks related to such vibration exposure for any of the Historical Structures.
- The maximum 62 metre bench simulation (potentially to be used as part of the Project) revealed that the maximum estimated vibration levels for the Historical Structures are in the order of 1.4 – 5.0 mm/s and 2.4 – 5.7 mm/s for the Year 9 and Year 21 pit boundaries respectively. To ensure the vibration limit (i.e. 5 mm/s) is not exceeded (particularly for St Phillips Church) the introduction of some control measures, such as deck charges or smaller bench heights, will be required.
- The study did not identify any major risks from blast vibration exposure, with the exception of the use of high bench sizes (i.e. 62 metres benches). The author acknowledges however that this point will be sufficiently covered by other limits, such as the 5 mm/s vibration limit imposed on private residences. The easiest and most practical solution is to introduce the internal (target) vibration limit set below the 5 mm/s vibration level which should minimise the risk of exceedance.
- Based on the modelling undertaken there is no risk of damage due to vibration exposure for any of the Historical Structures, for bench sizes up to 40 metres high (see Table 4 for the corresponding charge masses).
- To ensure that the mine complies with the vibration limits it is recommended that an ongoing vibration monitoring program is implemented. Permanent vibration monitoring stations should be installed at the three Historical Structures. This monitoring program should involve monitoring stations which represent vibration levels at the heritage structures. In addition, it is recommended that MTW undertakes monitoring of the structural conditions by completing a baseline dilapidation survey of St Phillip’s Church and additional survey if the representative monitor records ground vibration significantly higher than 5 mm/s.
- When blasting within 3000 metres of the Historical Structures it is recommended that MTW undertakes detailed vibration modelling for critical blasts to ensure vibration limits are not exceeded. The vibration modelling is to include vibration predictions and other factors such as wavefront reinforcement impact. In case of vibration limit exceedance a structural damage assessment of the structure is recommended, followed by appropriate reporting.

3 MONITORING

Blasts are monitored with the Datamasters V6 Blast Monitoring System. This system consists of blast monitoring stations in the field that are connected by wireless technology to an automated management system based at Datamasters office.

Blast results are automatically retrieved from the field stations, collated, reviewed and published to Datamasters web site where they are accessed by Coal & Allied users.

The monitoring stations are designed, operated, maintained and calibrated by Datamasters in accordance with the manufacturer's requirements and the requirements of AS 2187.2- 2006 'Storage and Use of Explosives'.

Blast monitoring is conducted at 7 locations around HVO as detailed in the HVO Blast Monitoring Programme. Monitoring will be undertaken in accordance with Australian Standard AS 2187.2- 2006 and Coal & Allied's environment procedures EP9.2 Blasting and EP1.10 Monitoring and Measurement.

Real-time meteorological data will be collected in relation to blast monitoring data. This information shall include wind speed, direction and temperature inversions (where applicable at the site).

Air overpressure and vibration associated with blasting shall be recorded for each blast. Monitoring data shall be reviewed by the Drill and Blast Engineer as soon as practicable after each blast.

Any blast exceeding the impact assessment criteria (Tables 2 & 3) shall be referred for additional analysis and interpretation by an external specialist in blast consulting where the reason for the levels cannot be established by the Drill & Blast Engineer. An external report shall be issued within 7 days. This investigation will review blast monitoring results, blast parameters, location and prevailing weather conditions. The investigation analysis is specific to each individual exceedance but may include wavetrace inspection, wavefront pattern analysis, regression analysis, meteorological effect analysis etc. The results of any blast exceeding the impact assessment criteria will be reported to the Department of Environment, Climate Change and Water (DECCW) within 24 hours of the blast occurring.

4 APPROVAL & CRITERIA

5.1 Current Approvals

HVO is the combined operations of the West Pit, Mitchell Pit and Carrington Pit situated to the north of the Hunter River, and Cheshunt Pit, Riverview Pit, Hunter Valley South Pit and South Lemington Pits situated south of the Hunter River. Air quality impacts around HVO are addressed in the following two most recent project approvals details in Table 1.

Table 1 APPLICABLE CONSENTS FOR HVO

Consent Area	Consent	Applicable Pits
South Pit Area	Hunter Valley Operations South Coal Project, Project Application 06_0261	Riverview Pit (South Pit) Cheshunt Pit South Lemington Pits
West Pit Area	HVO West Pit Extension Development Applications 450-10-2003 (including 2006 modification)	West Pit Carrington Pit North Pit

PAPER COPIES ARE UNCONTROLLED

**APPENDIX 4B – Protocol for Evaluating Blast and Vibration Compliance
(Continuation)**

Blasting impacts must be assessed against each of the project approvals. Accordingly, the limits and conditions specified in these documents will be used to assess the performance of HVO with regard to blasting.

5.2 Impact Assessment Criteria

Impact assessment criteria for blasting are provided in Table 2 and Table 3 below. These criteria apply to all blast monitoring locations at HVO.

Table 2 AIRBLAST OVERPRESSURE IMPACT ASSESSMENT CRITERIA

Airblast overpressure level (dB (L _m Peak))	Allowable exceedance
115	5% of the total number of blasts in a 12 month period.
120	0%

Table 3 GROUND VIBRATION IMPACT ASSESSMENT CRITERIA

Peak particle velocity (mm/s)	Allowable exceedance
5	5% of the total number of blasts in a 12 month period.
10	0%

An additional ground vibration impact assessment criterion applies to the HVO South Project: *"For St Phillip's Church and the outbuildings at Archerfield, the Proponent shall ensure that ground vibration peak particle velocity generated by the project does not exceed 5mm/s, or as otherwise approved by the Director General"*.

5 REPORTING

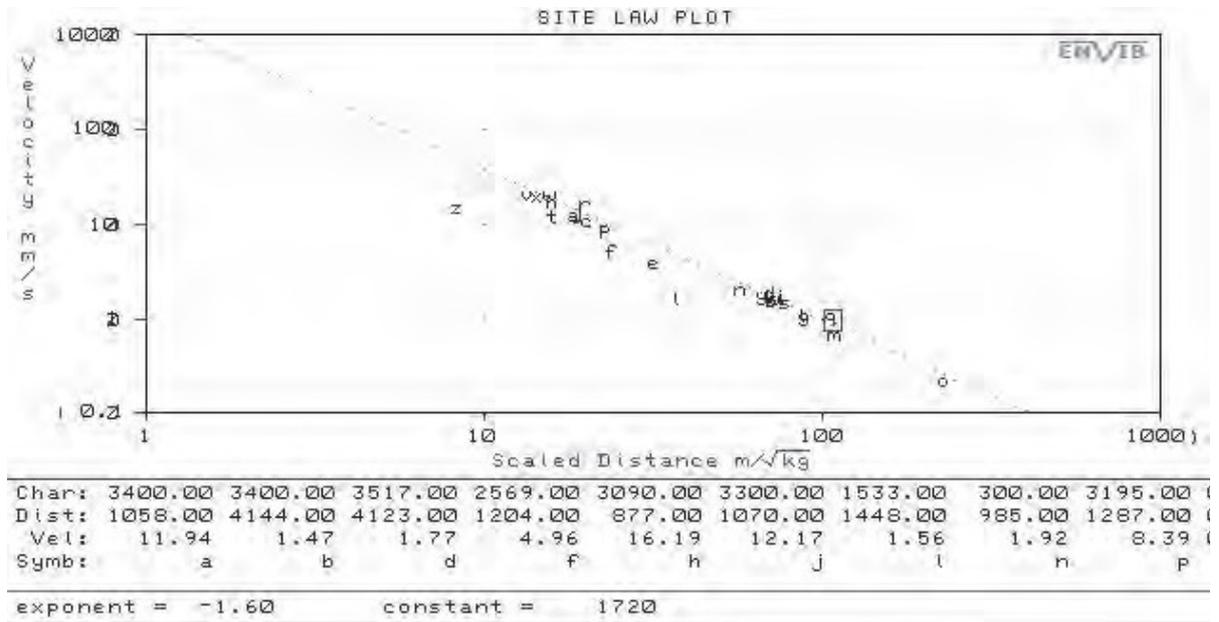

A summary of blast monitoring results will be reported quarterly on Coal & Allied's web site www.coalandallied.com.au.

An analysis and summary of blast monitoring results will be reported in the Annual Environmental Management Report.

Subject: Warkworth Continuation Project Blast Management Plan

Dear Mr Mulhearn

I refer to the updated Blast Management Plan (BMP) version 5.3, submitted in accordance with condition 16 of Schedule 3 of the development consent for the Warkworth Continuation Project (SSD 6464).

The Department has carefully reviewed the document notes that the BMP version 5.3:

- has been revised to reference Modification 2 (6464-MOD2) and the current EPL conditions;
- includes an updated Road Closure Management Plan with the current Road Closure Approvals from Singleton Council and the Road Opening Licences from Transport for NSW;
- has been provided to the EPA for consultation;
- includes minor administrative edits; and
- continues to address the relevant conditions of consent.

Accordingly, as nominee of the Planning Secretary, I approve the Blast Management Plan (version 5.3, dated 28 July 2025).

You are reminded that if there are any inconsistencies between the BMP and the conditions of consent, the conditions prevail. Please ensure you make the document publicly available on the project website at the earliest convenience.

If you wish to discuss the matter further, please contact Sarah Kamarudin on 02 8275 1861.

Yours sincerely

As nominee of the Planning Secretary
